

## Contents

### Preface IX

<b>1</b>	<b>Molecular Units</b>	<b>1</b>
1.1	Case Studies	1
1.1.1	Nucleic Acids	4
1.1.2	Proteins	11
1.1.3	Carbohydrates	20
1.1.4	Lipids	25
1.2	Basic Principles	27
1.2.1	The Persistence Lengths of Biopolymer Chains	27
1.2.2	Equilibrium Shape of a Semiflexible Polymer Chain	30
1.2.3	The Load–Extension Diagram of a Semiflexible Polymer Chain	31
1.2.4	Cooperativity	37
1.2.5	Protein Folding	39
1.2.6	DNA Melting Transition	46
1.2.7	Biocatalytic Reactions	46
1.3	Bioengineering	51
1.3.1	Biointerfacing	51
1.3.2	DNA-Based Nanotechnology	54
1.3.2.1	Biomolecular Templates for Submicrometer Electronic Circuitries	54
1.3.2.2	DNA-Based Nanoprobes	85
1.3.3	Protein-Based Nanotechnology	97
	References	104
<b>2</b>	<b>Molecular Recognition</b>	<b>109</b>
2.1	Case Study	109
2.2	Basic Principles	112
2.2.1	Complementary Interaction between Proteins and Ligands	113
2.2.2	Cooperative Protein–Ligand Interaction	114
2.2.3	The Enzyme-Linked Immunosorbent Assay	116
2.3	Engineering of Biomolecular Recognition Systems	119
2.3.1	Engineering of Protein-Based Bioaffine Materials	119
2.3.1.1	Interfacing Mechanisms of Proteins via Bioaffinity	119

2.3.2	Engineering of Sensing Biofunctionalized Materials	127
2.3.2.1	Design Principles of Biosensors	128
2.3.2.2	Integration of Sensing Biological Elements and Transducer Units	129
	References	147
<b>3</b>	<b>Cell Adhesion</b>	<b>149</b>
3.1	Case Study	150
3.2	Basic Principles	154
3.2.1	The Cellular Mechanotransduction System	154
3.2.2	Mechanical Impact of the ECM on Cell Development	158
3.2.3	Influence of the Microenvironment Topology on the Cell Spreading and Development	162
3.3	Bioengineering	164
3.3.1	The Basic Approach and Goals	164
3.3.2	Tailored Surfaces for In Vitro Culturing of Cells	168
3.3.2.1	A Modular Polymer Platform for Mechanically Regulated Cell Culturing at Interfaces	168
3.3.2.2	Regulation of Cell Fate by Nanostructured Surfaces	172
3.3.3	Three-Dimensional Scaffolds for Tissue Engineering	175
3.3.4	Switchable Substrates and Matrices	176
	References	181
<b>4</b>	<b>Whole-Cell Sensor Structures</b>	<b>183</b>
4.1	Case Studies	183
4.2	Basic Principles	184
4.3	Bioengineering	187
	References	197
<b>5</b>	<b>Biohybrid Silica-Based Materials</b>	<b>199</b>
5.1	Case Studies	199
5.2	Basic Principles	205
5.2.1	Preparation of Silica-Based Xerogels	205
5.2.2	Biological Properties of Silica-Based Biocers	212
5.3	Bioengineering	215
5.3.1	Bioactive Sol–Gel Coatings and Composites	216
5.3.2	Biocatalytic Sol–Gel Coatings	221
5.3.3	Bioremediation	223
5.3.4	Cell-Based Bioreactors	228
5.3.5	Silica-Based Controlled Release Structures	229
5.3.6	Patterned Structures	230
5.4	Silicified Geological Biomaterials	231
	References	234
<b>6</b>	<b>Biom mineralization</b>	<b>237</b>
6.1	Case Studies	237
6.2	Basic Principles	240

6.2.1	Precipitation	244
6.2.1.1	Thermodynamics of Mineralization	245
6.2.1.2	Kinetics of Mineralization	250
6.2.2	Phenomenology of Biomineralization	253
6.2.3	Basic Mechanisms in Biomineralization	254
6.2.4	Biologically Mediated Mineralization: the Competition between Inhibition and Growth	255
6.2.4.1	Effect of Polypeptides on Precipitate Habitus	256
6.2.4.2	The Formation of Metastable Polymorphs	258
6.2.5	Biologically Induced Mineralization: Role of the Extracellular Polymeric Substances	260
6.2.6	Biologically Controlled Mineralization: Molecular Preorganization, Recognition, and Vectorial Growth	267
6.2.6.1	Intracellular Mineralization	267
6.2.6.2	Epi- and Extracellular Mineralization	272
6.2.7	Mineralization of Diatom Shells: an Example of Unicellular Hierarchical Structures	277
6.2.8	Mineralization of Bone: an Example of Multicellular Biomineralization	282
6.2.8.1	The Mesoscopic Architecture of Bone	284
6.2.8.2	Bone Remodeling and Bone Repair	287
6.2.8.3	The Nanoscopic Structure of the Extracellular Matrix of Bone	292
6.2.8.4	The Polymer-Induced Liquid Precursor Process	298
6.2.8.5	Scale-Dependent Mechanical Behavior of Bone	301
6.2.9	Ancient Evidence of Biomineralization	304
6.2.9.1	Stromatolites: the Oldest Fossils by Biogenic Mineralization	304
6.3	Bioengineering	306
6.3.1	Bacteria-Derived Materials Development	306
6.3.1.1	Bio-Palladium: Biologically Controlled Growth of Metallic Nanoparticles	306
6.3.1.2	Biogenic Ion Exchange Materials	313
6.3.2	Bio-Inspired Design of Mineralized Collagen and Bone-Like Materials	314
6.3.2.1	Biomimetic Growth of Apatite-Gelatin Nanocomposites	314
6.3.2.2	Biomimetic Manufacturing of Mineralized Collagen Scaffolds	324
6.3.3	Biomimicking of Bone Tissue	338
6.3.3.1	Natural versus Synthetic Biopolymers for Scaffold Design	339
6.3.3.2	Protein-Engineered Synthetic Polymers	341
6.3.3.3	Protein-Engineered Collagen Matrices	345
6.3.4	Microbial Carbonate Precipitation in Construction Materials	354
6.3.5	The Potential of Biomineralization for Carbon Capture and Storage (CCS)	357
	References	359

<b>7</b>	<b>Self-Assembly</b>	<b>367</b>
7.1	Case Study	367
7.2	Basic Principles	372
7.2.1	Basic Phenomena of Self-Assembly and Self-Organization	372
7.2.2	Self-Assembly of Protein Filaments: the Cytoskeleton	373
7.2.3	Self-Assembly of $\beta$ -Sheets: the Amyloid Fibrils	380
7.2.4	Self-Assembly of Two-Dimensional Protein Lattices: the Bacterial Surface Layers (S-Layers)	381
7.2.5	Self-Organized Structures of Lipids	392
7.2.6	Liquid Crystals	396
7.3	Bioengineering	398
7.3.1	<i>In Vitro</i> Self-Assembly of Large-Scale Nanostructured Biomaterials	399
7.3.2	Template-Directed Assembly of Artificial Nanoparticles and Nanowires	413
7.3.3	Template-Free Directed Self-Assembly of Nanoparticles	429
	References	437
	<b>Appendix A Constants, Units, and Magnitudes</b>	<b>441</b>
A.1	Fundamental Constants	441
A.2	Table of SI Base Units	441
A.3	Table of Derived Units	442
A.4	Magnitudes	442
A.4.1	Sizes	442
A.4.2	Energies	443
A.4.3	Rates and Diffusion Constants	443
	<b>Appendix B Energy of a Bent Fiber</b>	<b>445</b>
	<b>Appendix C Circular Dichroism Spectroscopy</b>	<b>447</b>
	<b>Appendix D Task Solutions</b>	<b>449</b>
	<b>Index</b>	<b>453</b>
