Part I: Foundations, Probability and Evolutionary Computation

1	On the Foundations and the Applications of Evolutionary Computing	3
	<i>Pierre Del Moral, Alexandru-Adrian Tantar, Emilia Tantar</i>	
1.1	Introduction	3
1.1.1	From Evolutionary Computing to Particle Algorithms	6
1.1.2	Outline of the Chapter	10
1.2	Basic Notation and Motivation	10
1.3	Genetic Particle Models	13
1.4	Positive Matrices and Particle Recipes	16
1.4.1	Positive Matrices and Measures	16
1.4.2	Interacting Particle Models	18
1.4.3	Genealogical and Ancestral Structures	22
1.4.4	Complete Genealogical Tree Model	24
1.4.5	Particle Derivation and Conditioning Principles	26
1.5	Some Application Domains	30
1.5.1	Particle Absorption Models	30
1.5.2	Signal Processing and Bayesian Inference	36
1.5.3	Interacting Kalman Filters	43
1.5.4	Stochastic Optimization Algorithms	46
1.5.5	Analysis of Convergence under Uncertain Behavior	53
1.5.6	Rare Events Stochastic Models	66
	References	80
2	Incorporating Regular Vines in Estimation of Distribution Algorithms	91
	<i>Rogelio Salinas-Gutiérrez, Arturo Hernández-Aguirre, Enrique R. Villa-Diharce</i>	
2.1	Introduction	91
2.2	Estimation of Distribution Algorithms	92

2.3 Copula Functions 95

2.3.1 The Gaussian Copula 96

2.4 Regular Vines 100

2.4.1 Copula Entropy and Mutual Information 102

2.5 EDAs Based on Regular Vines 111

2.5.1 Description of the C-Vine EDA 111

2.5.2 Description of the D-Vine EDA 112

2.5.3 Incorporating the Gaussian Copula 113

2.6 Conclusions 116

References 117

3 The Gaussian Polytree EDA with Copula Functions and Mutations 123

Ignacio Segovia Domínguez, Arturo Hernández Aguirre, Enrique Villa Diharce

3.1 Introduction 123

3.2 Related Work 126

3.3 The Gaussian Poly-Tree 127

3.3.1 Construction of the GPT 127

3.3.2 Simulating Data from a Poly-Tree 130

3.4 The Gaussian Poly-Tree with Gaussian Copula Function 131

3.4.1 Gaussian Copula Functions 132

3.4.2 Building the Gaussian Copula Poly-Tree and Data Simulation 134

3.5 Gaussian Poly-Trees with Gaussian Copula Functions + Mutations 136

3.6 Experiments 137

3.6.1 Experiment 1: Contrasting the Gaussian Poly-Tree with the Dependence Tree 137

3.6.2 Experiment 2: Solving Unimodal Functions with the GPT-EDA 139

3.6.3 Experiment 3: Solving Multimodal Functions with the GPT-EDA 139

3.6.4 Experiment 4: Solving Unimodal Functions with the GCPT-EDA 140

3.6.5 Experiment 5: Solving Multimodal Functions with the GCPT-EDA 141

3.6.6 Experiment 6: Solving Unimodal Functions with the GCPT-EDA + Mutations 141

3.6.7 Experiment 7: Solving Multimodal Functions with the GCPT-EDA + Mutations 144

3.7 Conclusions 151

References 152

Appendix A: Test Function Difintions 153

Part II: Set Oriented Numerics

4	On Quality Indicators for Black-Box Level Set Approximation	157
	<i>Michael T.M. Emmerich, André H. Deutz, Johannes W. Kruisselbrink</i>	
4.1	Introduction	157
4.2	Related Work	160
4.3	Decision Theoretic Motivation of Quality Indicators	160
4.3.1	Pareto Order for Representativeness	161
4.3.2	Lorenz Order for Representativeness	162
4.3.3	Unary Indicators for Representativeness	164
4.3.4	A Preference Order for Feasibility	167
4.3.5	Combining Representativeness and Feasibility	168
4.3.6	Diversity versus Representativeness	170
4.4	Selected Quality Indicators and Their Properties	171
4.4.1	Simple Spread Indicators	171
4.4.2	Diversity Indicators	172
4.4.3	Indicators Based on Distances between Sets	174
4.5	Numerical Results	180
4.5.1	Experimental Study	181
4.6	Summary and Outlook	184
	References	184
5	Set Oriented Methods for the Numerical Treatment of Multiobjective Optimization Problems	187
	<i>Oliver Schütze, Katrin Witting, Sina Ober-Blöbaum, Michael Dellnitz</i>	
5.1	Introduction	187
5.2	Multiobjective Optimization	189
5.3	A Subdivision Algorithm for the Computation of Relative Global Attractors	190
5.3.1	The Relative Global Attractor	190
5.3.2	The Algorithm	192
5.3.3	Realization of the Algorithm	193
5.4	Basic Algorithms for Multiobjective Optimization	194
5.4.1	Subdivision Techniques	195
5.4.2	Recover Techniques in Parameter Space	198
5.4.3	Image-Set Oriented Recover Techniques	202
5.5	Multiobjective Optimal Control Problems	207
5.5.1	Differentially Flat Systems	207
5.5.2	Lagrangian Systems	211
5.6	Concluding Remarks	215
	References	216

Part III: Landscape, Coevolution and Cooperation

6	A Complex-Networks View of Hard Combinatorial Search Spaces	223
	<i>Marco Tomassini, Fabio Daolio</i>	
6.1	Hard Problems, Search Spaces, and Fitness Landscapes	223
6.1.1	Fitness Landscapes	224
6.1.2	Local Optima Networks	227
6.1.3	Some Definitions for Weighted Complex Networks	228
6.2	Local Optima Networks of NK Landscapes	229
6.2.1	Basins of Attraction	234
6.3	LONs for the QAP Fitness Landscapes	237
6.3.1	General Network Features	238
6.3.2	Optima Distribution and Clustering	241
6.4	Conclusions and Prospects	243
	References	244
7	Cooperative Coevolution for Agrifood Process Modeling	247
	<i>Olivier Barrière, Evelyne Lutton, Pierre-Henri Wuillemin, Cédric Baudrit, Mariette Sicard, Nathalie Perrot</i>	
7.1	Introduction	248
7.2	Modeling Agri-Food Industrial Processes	250
7.2.1	The Camembert-Cheese Ripening Process	250
7.2.2	Modeling Expertise on Cheese Ripening	252
7.3	Phase Estimation Using GP	253
7.3.1	Phase Estimation Using a Classical GP	254
7.3.2	Phase Estimation Using a Parisian GP	257
7.4	Bayesian Network Structure Learning Using CCEAs	263
7.4.1	Recall of Some Probability Notions	263
7.4.2	Bayesian Networks	264
7.4.3	Evolution of an Independence Model	268
7.4.4	Sharing	271
7.4.5	Immortal Archive and Embossing Points	272
7.4.6	Description of the Main Parameters	273
7.4.7	Bayesian Network Structure Estimation	273
7.4.8	Experiments and Results	275
7.4.9	Analysis	281
7.5	Conclusion	282
	References	283
8	Hybridizing cGAs with PSO-like Mutation	289
	<i>E. Alba, A. Villagra</i>	
8.1	Introduction	289
8.2	Basic Concepts	290
8.2.1	Particle Swarm Optimization	291
8.2.2	Cellular Genetic Algorithm	292

8.3 Active Components of PSO into cGA 293

8.4 Experiments and Analysis of Results 295

8.5 Conclusions and Further Work 300

References 301

Part IV: Multi-objective Optimization, Heuristic Conversion Algorithms

9 On Gradient-Based Local Search to Hybridize Multi-objective Evolutionary Algorithms 305

Adriana Lara, Oliver Schütze, Carlos A. Coello Coello

9.1 Introduction 305

9.2 Descent Cones and Directions 308

9.3 Practical Approaches 312

9.3.1 Movements toward the Optimum 312

9.3.2 Movements along the Pareto Set 314

9.3.3 Directed Movements 320

9.3.4 Step-Length Computation 324

9.4 Toward the Hybridization 324

9.4.1 Main Issues 324

9.4.2 Early Hybrids 326

9.5 Conclusions and New Trends 327

References 329

10 On the Integration of Theoretical Single-Objective Scheduling Results for Multi-objective Problems 333

Christian Grimme, Markus Kemmerling, Joachim Lepping

10.1 Introduction 333

10.2 Scheduling Problems and Theoretical Results 335

10.2.1 Single-Objective 336

10.2.2 Multi-objective 337

10.2.3 The Gap between Single-Objective Theory and Multi-objective Approaches 342

10.3 The Modular Predator-Prey Model 342

10.4 Adopting the Predator-Prey Model to Scheduling Problems 346

10.4.1 Variation Operator Design 346

10.4.2 Evaluation 348

10.5 Integrating a Self-adaptive Mechanism for Diversity Preservation . 352

10.5.1 Algorithmic Extension and Implementation 353

10.5.2 Evaluation 356

10.6 Conclusion 360
