A Second Order Accurate Kinetic Relaxation Scheme for Inviscid Compressible Flows	1
<i>K.R. Arun, M. Lukáčová-Medvidová, Phoolan Prasad, S.V. Raghurama Rao</i>	
1 Introduction	2
2 Relaxation System for Euler Equations	3
3 Kinetic Relaxation Scheme	6
3.1 Conservation Property of the Scheme	8
3.2 Positivity Preserving Property	9
3.3 Entropy Stability of the Scheme	11
4 Second Order Accurate Kinetic Relaxation Scheme	12
4.1 Second Order Accuracy in Time	13
4.2 Second Order Accuracy in Space	16
5 Numerical Case Studies	18
6 Concluding Remarks	22
References	23
On One-Dimensional Low Mach Number Applications	25
<i>Maria Bauer, Elisabetta Felaco, Ingenuin Gasser</i>	
1 Introduction	25
1.1 General Setting	26
1.2 Initial and Boundary Conditions	27
1.3 Asymptotic Regimes	28
2 The Gas Dynamics in a Chimney	28
2.1 Asymptotics	29
2.2 Numerical Simulations	31
3 Modelling an Energy Tower	33
3.1 Asymptotics and Numerical Simulations	35
4 Conclusion	38
References	38

High Order and Underresolution	41
<i>Andrea Beck, Gregor Gassner, Claus-Dieter Munz</i>	
1 Introduction	41
2 Numerical Model	42
2.1 Physical Model	42
2.2 Discontinuous Galerkin	43
2.3 Stability and De-aliasing	45
3 High Order Simulation of Underresolved Turbulence	50
3.1 High vs. Low Order Simulations at Moderate Resolutions	50
3.2 Underresolution: Stability by Overintegration	51
3.3 Accuracy and Efficiency	52
4 Conclusion	54
References	55
 Solving Nonlinear Systems Inside Implicit Time Integration Schemes for Unsteady Viscous Flows	57
<i>Philipp Birken</i>	
1 Introduction	57
2 Navier-Stokes Equations	59
3 Implicit Time Discretization	59
4 Solving Nonlinear Equation Systems	60
4.1 Multigrid Schemes	60
4.2 Newton Schemes	65
5 Summary and Conclusions	69
References	69
 Discrete Flux-Corrected Transport: Numerical Analysis, Tensor-Valued Extension and Application in Image Processing	73
<i>Michael Breuß, Bernhard Burgeth, Luis Pizarro</i>	
1 Introduction	73
2 The PDEs of Mathematical Morphology	74
3 Review of the DFCT Method	75
4 Analysis of the DFCT Scheme	76
5 Mathematics of Matrix Fields	78
6 PDE-Based Morphology for Matrix Fields	81
7 Numerical Experiments	83
8 Conclusion	86
References	86
 Quantification of Numerical and Physical Mixing in Coastal Ocean Model Applications	89
<i>Hans Burchard, Ulf Gräwe</i>	
1 Introduction	89
2 Model Equations	90

2.1	Continuous Equations	90
2.2	Discretisation and Numerical Mixing Analysis	92
3	Applications	96
3.1	General Estuarine Transport Model (GETM)	96
3.2	Freshwater Lens	96
3.3	Western Baltic Sea	99
4	Conclusions	101
	References	102
