1	Introduction	1
1.1	Background and Motivation	1
1.2	Research Objective and Outline	4
1.3	Thesis Summary	6
	References	6
2	Governing Equations for Wave Propagation in a Fluid-Saturated Porous Medium	9
2.1	Introduction	9
2.2	Definitions	10
2.3	Continuum Description of a Porous Medium	11
2.4	Stress-Strain Relations	13
2.4.1	Effect of Fluid Pressure (Unjacketed Test)	14
2.4.2	Effect of Intergranular Stresses (Jacketed Test)	15
2.4.3	Combination of Effects	15
2.4.4	Relation of Biot's Elastic Constants to Physical Quantities	16
2.5	Equations of Motion	19
2.5.1	Incorporation of Frequency-Dependent Permeability or Tortuosity	21
2.5.2	Alternative Formulation of the Equations of Motion	25
2.6	Conclusions	26
	References	27
3	Green's Tensors for Wave Propagation in a Fluid-Saturated Porous Medium	29
3.1	Introduction	29
3.2	Green's Tensors for Infinite Space	30
3.2.1	Inverse Transform of Scalar Green's Functions	34
3.2.2	Low-Frequency Approximation	36

3.2.3	High-Frequency Approximation	40
3.3	Impedances of the Wavemodes	42
3.4	Numerical Examples	44
3.5	Discussion	50
3.6	Conclusions	51
	References	51
4	On Wavemodes at the Interface of a Fluid and a Fluid-Saturated Poroelastic Solid	53
4.1	Introduction	53
4.2	Model	55
4.3	Green's Functions	58
4.4	Numerical Implementation	61
4.5	Numerical Results and Discussion	62
4.5.1	Residue Contribution Versus Full Response	63
4.5.2	Presence of pR -pole and pSt -pole on Riemann Sheets . . .	69
4.5.3	Physical Significance of Additional Poles	70
4.6	Conclusions	72
4.7	Appendix A: Transform-Domain Response	72
4.8	Appendix B: Inverse Fourier Integral	75
	References	76
5	Pseudo Interface Waves Observed at the Fluid/Porous-Medium Interface: A Comparison of Two Methods	79
5.1	Introduction	79
5.2	Model	81
5.3	Green's Functions	83
5.3.1	Plane-Wave Domain Response	83
5.3.2	Method I: Vertical Branch Cuts	85
5.3.3	Method II: Hyperbolic Branch Cuts	86
5.3.4	Inverse Fourier Transform	87
5.4	Physical Interpretation of Separate Contributions of the Far-Field Interface Response	88
5.4.1	Approximate Pole Contributions	88
5.4.2	Approximate Branch-Cut Contributions	88
5.4.3	Physical Interpretation of Contributions	92
5.5	Numerical Results	92
5.5.1	Separate Wavemodes	94
5.5.2	Interfering Wavemodes	97
5.5.3	Migration of Poles	99
5.6	Discussion	99
5.7	Conclusions	100
	References	101

6	Impedance and Ellipticity of Fluid/Elastic-Solid Interface Waves: Medium Characterization and Simultaneous Displacement–Pressure Measurements	103
6.1	Introduction	103
6.2	Impedance and Ellipticity	105
6.3	Medium Characterization	111
6.4	Experiment-Specific Modeling	112
6.4.1	Acoustic Response	113
6.4.2	Effect of Optical Refractive-Index Changes Integrated Along Laser Beam	114
6.5	Experimental Results and Impedance Extraction	116
6.6	Experimental Observations Versus Model Predictions	119
6.7	Discussion	121
6.8	Conclusions	122
6.9	Appendix A: Cagniard-de Hoop Solution	123
	References	126
7	Impedance and Ellipticity of Fluid/Porous-Medium Interface Waves: Medium Characterization and Simultaneous Displacement–Pressure Measurements	129
7.1	Introduction	129
7.2	Impedance and Ellipticity	131
7.3	Porous-Medium Characterization	136
7.4	Experiment-Specific Modeling	140
7.5	Experimental Results	141
7.6	Experimental Observations Versus Model Predictions	142
7.7	Conclusions	145
	References	146
8	In-Situ Permeability from Integrated Poroelastic Reflection Coefficients	147
8.1	Introduction	147
8.2	Mesoscopic-Flow Mechanism	148
8.3	Permeability from Integrated Reflection Coefficients	149
8.4	Discussion	152
8.5	Conclusions	154
	References	154
9	Conclusions	157
