

1	Introduction	1
1.1	The Topological Derivative Concept	3
1.2	Relationship between Shape and Topological Derivatives	10
1.2.1	The Topological-Shape Sensitivity Method	12
1.2.2	An Example of Topological Derivative Evaluation	14
1.3	Monograph Organization	20
1.4	Exercises	23
2	Domain Derivation in Continuum Mechanics	25
2.1	Material and Spatial Descriptions	26
2.1.1	Gradient of Scalar Fields	28
2.1.2	Gradient of Vector Fields	28
2.1.3	Spatial Description of Velocity Fields	29
2.2	Material Derivatives of Spatial Fields	30
2.2.1	Derivative of the Gradient of a Scalar Field	31
2.2.2	Derivative of the Gradient of a Vector Field	32
2.3	Material Derivatives of Integral Expressions	33
2.3.1	Domain Integral	33
2.3.2	Boundary Integral	35
2.4	Summary of the Derived Formulae	38
2.5	The Eshelby Energy-Momentum Tensor	40
2.6	Exercises	43
3	Material and Shape Derivatives for Boundary Value Problems	47
3.1	Preliminaries	48
3.1.1	Sobolev-Slobodetskii Spaces	49
3.1.2	Elliptic Regularity	50
3.1.3	Elliptic Problems in Nonsmooth Domains	51
3.1.4	Shape Derivatives	52

3.2	Material Derivatives for Second Order Elliptic Equations	55
3.2.1	Weak Material Derivatives for the Dirichlet Problem	55
3.2.2	Strong Material Derivatives for the Dirichlet Problem	60
3.2.3	Material Derivatives for the Neumann Problem	62
3.3	Shape Derivatives for Second Order Elliptic Equations	64
3.3.1	Shape Derivatives for the Dirichlet Problem	64
3.3.2	Shape Derivatives for the Neumann Problem	66
3.4	Material and Shape Derivatives for Elasticity Problems	68
3.4.1	Problem Formulation	68
3.4.2	Material Derivatives for Elasticity	71
3.4.3	Shape Derivatives for Elasticity	73
3.4.4	Shape Derivatives for Interfaces	76
3.5	Material and Shape Derivatives for Kirchhoff Plates	77
3.5.1	Problem Formulation	78
3.5.2	Material Derivatives for the Kirchhoff Plate	79
3.5.3	Shape Derivatives for the Kirchhoff Plate	80
3.6	Material and Shape Derivatives in Fluid Mechanics	82
3.6.1	The Adjugate Matrix Concept	82
3.6.2	Shape Derivatives for the Stationary, Homogeneous Navier-Stokes Problem	87
3.6.3	Material Derivatives for the Stationary, Homogeneous Navier-Stokes Problem	87
3.7	Exercises	89
4	Singular Perturbations of Energy Functionals	91
4.1	Second Order Elliptic Equation: The Poisson Problem	92
4.1.1	Problem Formulation	92
4.1.2	Shape Sensitivity Analysis	94
4.1.3	Asymptotic Analysis of the Solution	97
4.1.4	Topological Derivative Evaluation	100
4.1.5	Examples with Explicit Form of Topological Derivatives	106
4.1.6	Additional Comments and Summary of the Results	110
4.2	Second Order Elliptic System: The Navier Problem	112
4.2.1	Problem Formulation	112
4.2.2	Shape Sensitivity Analysis	114
4.2.3	Asymptotic Analysis of the Solution	117
4.2.4	Topological Derivative Evaluation	120
4.3	Fourth Order Elliptic Equation: The Kirchhoff Problem	122
4.3.1	Problem Formulation	123
4.3.2	Shape Sensitivity Analysis	125
4.3.3	Asymptotic Analysis of the Solution	129
4.3.4	Topological Derivative Evaluation	132
4.4	Exercises	136

- 5 Configurational Perturbations of Energy Functionals** 137
 - 5.1 Second Order Elliptic Equation: The Laplace Problem 138
 - 5.1.1 Problem Formulation 138
 - 5.1.2 Shape Sensitivity Analysis 140
 - 5.1.3 Asymptotic Analysis of the Solution 143
 - 5.1.4 Topological Derivative Evaluation 145
 - 5.1.5 Numerical Example 147
 - 5.2 Second Order Elliptic System: The Navier Problem 148
 - 5.2.1 Problem Formulation 148
 - 5.2.2 Shape Sensitivity Analysis 151
 - 5.2.3 Asymptotic Analysis of the Solution 153
 - 5.2.4 Topological Derivative Evaluation 157
 - 5.2.5 Numerical Example 159
 - 5.3 Fourth Order Elliptic Equation: The Kirchhoff Problem 160
 - 5.3.1 Problem Formulation 161
 - 5.3.2 Shape Sensitivity Analysis 164
 - 5.3.3 Asymptotic Analysis of the Solution 167
 - 5.3.4 Topological Derivative Evaluation 172
 - 5.3.5 Numerical Example 173
 - 5.4 Estimates for the Remainders 175
 - 5.5 Exercises 180

- 6 Topological Derivative Evaluation with Adjoint States** 181
 - 6.1 Problem Formulation 181
 - 6.2 Shape Sensitivity Analysis 184
 - 6.3 Asymptotic Analysis of the Solution 189
 - 6.3.1 Asymptotic Expansion of the Direct State 190
 - 6.3.2 Asymptotic Expansion of the Adjoint State 191
 - 6.4 Topological Derivative Evaluation 192
 - 6.5 Exercises 194

- 7 Topological Derivative for Steady-State Orthotropic Heat Diffusion Problems** 195
 - 7.1 Problem Formulation 196
 - 7.2 Shape Sensitivity Analysis 198
 - 7.3 Asymptotic Analysis of the Solution 199
 - 7.4 Topological Derivative Evaluation 201

- 8 Topological Derivative for Three-Dimensional Linear Elasticity Problems** 203
 - 8.1 Problem Formulation 203
 - 8.2 Shape Sensitivity Analysis 206
 - 8.3 Asymptotic Analysis of the Solution 207

8.4	Topological Derivative Evaluation	211
8.5	Numerical Example	213
8.6	Multiscale Topological Derivatives	217
8.6.1	Multiscale Modeling in Solid Mechanics	217
8.6.2	The Homogenized Elasticity Tensor	219
8.6.3	Sensitivity of the Macroscopic Elasticity Tensor to Topological Microstructural Changes	221
9	Compound Asymptotic Expansions for Spectral Problems	225
9.1	Preliminaries and Examples	226
9.2	Dirichlet Laplacian in Domains with Small Cavities	228
9.2.1	First Order Asymptotic Expansion	229
9.2.2	Second Order Asymptotic Expansion	232
9.2.3	Complete Asymptotic Expansion	236
9.3	Neumann Laplacian in Domains with Small Caverns	239
9.3.1	First Boundary Layer Corrector	242
9.3.2	Second Boundary Layer Corrector	246
9.3.3	Correction Term of Regular Type	250
9.3.4	Multiple Eigenvalues	255
9.4	Configurational Perturbations of Spectral Problems in Elasticity ...	256
9.4.1	Anisotropic and Inhomogeneous Elastic Body	257
9.4.2	Vibrations of Elastic Bodies	258
9.4.3	Formal Construction of Asymptotic Expansions	261
9.4.4	Polarization Matrices	273
10	Topological Asymptotic Analysis for Semilinear Elliptic Boundary Value Problems	277
10.1	Topological Derivatives in $\mathbb{R}^2$	279
10.1.1	Formal Asymptotic Analysis	280
10.1.2	Formal Asymptotics of Shape Functional	284
10.2	Topological Derivatives in $\mathbb{R}^3$	287
10.2.1	Asymptotic Approximation of Solutions	287
10.2.2	Asymptotics of Shape Functional	292
10.3	Exercises	295
11	Topological Derivatives for Unilateral Problems	299
11.1	Preliminaries	300
11.2	Domain Decomposition and the Steklov-Poincaré Operator	302
11.2.1	Domain Decomposition Technique	304
11.2.2	Steklov-Poincaré Pseudodifferential Boundary Operators ...	305
11.3	Domain Decomposition Method for Variational Inequalities	308
11.3.1	Problem Formulation	308
11.3.2	Hadamard Differentiability of Minimizer	310

11.3.3	Topological Derivative Evaluation	311
11.4	Cracks on Boundaries of Rigid Inclusions	314
11.4.1	Problem Formulation	315
11.4.2	Approximation of a Rigid Inclusion with Contrast Parameter	317
11.4.3	Hadamard Differentiability of Solutions to Variational Inequalities	320
11.4.4	Topological Derivative Evaluation	321
11.5	Exercises	324
A	Auxiliary Results for Spectral Problems	325
A.1	Preliminaries Results	325
A.2	Lemma on Almost Eigenvalues and Eigenvectors	329
B	Spectral Problem for the Neumann Laplacian	331
B.1	The Weighted Poincaré Inequality	331
B.2	Asymptotics for Spectral Problem	335
C	Spectral Problems in Elasticity	345
C.1	Justification of Asymptotic Expansions	345
C.2	Proof of Theorem 9.2	352
D	Polarization Tensor in Elasticity	355
D.1	Elasticity Boundary Value Problems	355
D.1.1	Voigt Notation in Elasticity	355
D.1.2	Korn Inequality	356
D.2	Polarization Matrices in Elasticity	357
D.3	The Polarization Matrices for Three-Dimensional Anisotropic Elasticity Problems	360
D.3.1	Solvability of the Transmission Problems	360
D.3.2	Asymptotic Behavior of the Solutions	364
D.3.3	The Polarization Matrix and Its Properties	366
D.3.4	Homogeneous Inclusion	368
E	Compound Asymptotic Expansions for Semilinear Problems	371
E.1	Linearized Problem in Weighted Hölder Spaces	372
E.2	Estimates for the Remainders	374
F	Sensitivity Analysis for Variational Inequalities	381
F.1	Polyhedral Convex Sets in Sobolev Spaces of the Dirichlet Type	382
F.2	Compactness of the Asymptotic Energy Expansion	383

G	Tensor Calculus	389
G.1	Inner, Vector and Tensor Products	389
G.2	Gradient, Divergence and Curl	390
G.3	Integral Theorems	391
G.4	Some Useful Decompositions	392
G.5	Polar and Spherical Coordinate Systems	394
