Preface	1
Note to the English edition	5
1. The Initial Approach	
Overview of the planetary system—Fundamental structures in spatial relationships and the orbital periods	7
2. Geometry and Harmonics	
Basic geometrical figures and harmonic intervals in music—Correspondences between geometrical and musical relationships and those found in images of planetary movements	24
3. A Backward Glance and a Glance up to the Stars	
Earlier ideas about order in the planetary system: Plato, the Titius-Bode law, Johannes Kepler—Kepler's stellar solids	38
4. Analysis of the Harmonic Relationships	
The ideas of Kepler et al.—Discovering statistically significant correspondences between velocity ratios and musical intervals	55
5. Current Scientific Thinking	
From the past to the present day: theories on the origin of the planetary system—The future: is the solar system stable?—'A stable chaos'	79
6. The Journey Continues: Rhythms and Eccentricities	
Depicting movements in various planetary configurations—Rhythms of gravitational interaction—Characteristics of the eccentricities	100
7. Venus, Earth, Mars	
The determining rhythm of the Venus/Earth conjunctions—Connections of this basic rhythm with the outer planetary system	125
8. Underneath the Clouds of Venus	
The unusual rotation of Venus—The logically structured	

inclusion of the Venus rotation in the movements of all the planets out to Jupiter	142
9. Rotations	
Current solar research—Characteristics of the Moon's movement—The secret of the geometrical link between the four slowly rotating bodies	161
10. A Symphony of Flowers and Stars	
Long-term movement figures in constellations of any three planets—Interplay between inner and outer planetary system—The inner structure of the 'symphony' of movements	189
11. Journeys into Macrocosm and Microcosm	
Current scientific thinking on cosmology—The big bang theory—Structures in the universe—Harmony at the level of elementary particles	216
12. Ultimate Perfection	
Movement figures in the outer planetary system—Further interrelationships between outer and inner planetary movements—Summary: the celestial bodies are telling us a story	238
13. The Signature	
The order of the planetary orbits—The magnitude of the Sun as the basic measure—The Signature of the Celestial Spheres: an overall view of the spatial structures	270
Appendix	296
1. Basic geometric and harmonic data	296
1.1 The ellipse	296
1.2 The golden section	298
1.3 Square, triangle and hexagon	300
1.4 Euclid's Height Theorem	303
1.5 Octavation, intervals and scales	303
1.6 The musical intervals as ratios of areas	307
2. Star-figures	309
2.1 The pentagram	309
2.2 The 10-pointed star	313
2.3 The 12-pointed star	319
2.4 Kepler's stellar solids	321

3. Astronomical calculations	325
3.1 General	325
3.2 Kepler's Third Law	327
3.3 Velocities and distances; angles according to Johannes Kepler	328
3.4 Synodic periods, mean orbital periods, basic data	330
3.5 Cycle-resonance, calculation, evaluation	335
3.6 Planetary programs used	339
3.7 Accuracy and validity	340
4. Probability calculations	343
4.1 Ascertaining the harmonic probability	343
4.2 The t-test	344
4.3 The probability of the star-figures	346
4.4 Probability calculations in Chapter 11	348
4.5 Probability calculations in Chapter 13	349
5. Planetary scales	353
5.1 Musical scale derived from the distances of the planets according to Hans Kayser	353
5.2 Musical scale from the synodic periods according to Thomas M. Schmidt	354
6. Astronomical data	356
6.1 Basic data	356
6.2 Resonances of the orbital periods	357
6.3 Conjunction periods/synodic periods	358
6.4 Velocity intervals	359
6.5 Intervals of the semi-minor axes	360
6.6 Intervals of the aphelion and perihelion distances	361
6.7 Positions for Venus, Earth and Venus rotation at Venus-Earth-View	361
6.8 Data pertaining to Sun/Mercury/Venus rotation	363
6.9 Elementary particles	364
Glossary	367
Bibliography	373
Notes	377
Picture sources	385
Index	387
