Contents

Part I Introduction

1 Introduction 3
1.1 Book Structure 6

Part II Modeling of Complex Systems for Predictive Control

2 Hybrid Dynamics 11
2.1 General Mathematical Formulation 11
2.1.1 Dynamical System 11
2.1.2 General Hybrid Dynamical System 12
2.1.3 Controlled General Hybrid Dynamical System 13
2.2 Interlacing of the Continuous and the Discrete Dynamics 14
2.2.1 Autonomous Switching 15
2.2.2 Autonomous Jumps 15
2.2.3 Controlled Switching 16
2.2.4 Controlled Jumps 16
2.3 Modeling Contributions for Hybrid Systems 17
2.3.1 Witsenhausen's Model 18
2.4 Modeling of Hybrid Systems for Predictive Control in a Discrete-Time Setting 20
References 21

3 Piecewise Affine and Equivalent Models 23
3.1 Formulations of Hybrid Systems That Are Equivalent to Piecewise Affine Systems 23
3.1.1 Piecewise Affine Systems 24
3.1.2 Mixed Logical-Dynamical Systems 25
3.1.3 Linear Complementarity Systems 26
3.1.4 Extended Linear Complementarity Systems 27
3.1.5 Max-Min-Plus-Scaling Systems 28

Bibliografische Informationen
http://d-nb.info/102565174X

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.1.6 Transformations among Formulations of Models 28
3.2 Usability of Piecewise Affine and Equivalent Models 30
3.3 Limitations of Piecewise Affine and Equivalent Models 30
References 31

4 Hybrid Fuzzy Model 33
4.1 Nonlinearity and Fuzzy Models 33
4.1.1 Takagi-Sugeno Fuzzy Models 33
4.2 Modeling of a Hybrid Fuzzy Model 35
4.2.1 Hierarchy of a Hybrid Fuzzy Model 35
4.2.2 Extension of the Takagi-Sugeno Fuzzy Model Formulation to Nonlinear Hybrid Systems 36
4.2.3 Formulation of a Hybrid Fuzzy Model 38
4.2.4 Generalization of a the Hybrid Fuzzy Model 39
4.3 Identification of a Hybrid Fuzzy Model 40
4.3.1 Fuzzy Clustering 40
4.3.2 Projections of the Fuzzy Clusters into the Input Space of the Hybrid Fuzzy Model 42
4.3.3 Global Linear Model 45
4.3.4 Preparation of the Data for Estimation of the Parameters of the Hybrid Fuzzy Model 45
4.3.5 Estimation of the Parameters of the Hybrid Fuzzy Model by Means of a Modified Least-Squares Method 46
References 47

5 Unsupervised Learning Methods for Identification of Complex Systems 49
5.1 Introduction to Unsupervised Learning Methods 51
5.2 Principal Component Analysis 51
5.2.1 Inverting a Matrix with Collinear Data 55
5.3 Fields of Use of Principal Component Analysis and Regression 60
5.3.1 Structure Identification Using Principal Component Analysis 60
5.3.2 Parameter Estimation Using Principal Component Analysis 61
5.3.3 Case Study: Structure Identification Using of a Second-Order System Using Principal Component Analysis 62
5.3.4 Online Process Supervision 64
5.4 Fuzzy Clustering with Cluster Center Points 75
5.4.1 Fuzzy c-Means Clustering Algorithm 75
5.4.2 Gustafson-Kessel Clustering 84
5.4.3 Clustering Algorithm Based on Fuzzy Maximum Likelihood Estimates 89
5.5 Clustering Algorithm Using Linear Prototypes – A Generalized Clustering Method 91

5.5.1 Fuzzy c-Varieties Clustering Algorithm 93
5.5.2 Clustering Algorithm Based on Fuzzy Ellipsoids 97
References 98

Part III Modeling an Identification of a Batch Reactor

6 Batch Reactor 101
6.1 Structure of the Batch Reactor 101
6.2 Basic Mathematical Model of the Batch Reactor Using Differential Equations 102
6.2.1 The Law of Conservation of Energy for the Core of the Batch Reactor 104
6.2.2 The Law of Conservation of Energy for the Water Jacket of the Batch Reactor 104
Reference 104

7 Modeling and Identification of the Batch Reactor: The PWA Approach 105
7.1 Identification Data 105
7.2 Partitioning of the System 107
7.3 Temperature in the Core of the Batch Reactor 108
7.3.1 Model Structure 108
7.3.2 Model Parameters 109
7.4 Temperature in the Water Jacket of the Batch Reactor 110
7.4.1 PWA Model – Approach 1 110
7.4.2 PWA Model – Approach 2 113
7.4.3 PWA Model – Approach 3 114
7.4.4 PWA Model – Approach 4 120
7.5 Validation 121
7.5.1 Validation Data 122
7.5.2 Experiments 122
7.5.3 Discussion 128

8 Modeling and Identification of the Batch Reactor: The HFM Approach 131
8.1 Identification Data 131
8.2 Partitioning of the System 131
8.3 Temperature in the Core of the Batch Reactor 132
8.4 Temperature in the Water Jacket of the Batch Reactor 132
8.4.1 HFM – Approach 1 133
8.4.2 HFM – Approach 2: Fuzzy Clustering 135
8.5 Validation 138
8.5.1 Validation Data 138
8.5.2 Experiments 139
8.5.3 Discussion 142

Part IV Predictive Control of Complex Systems

9 Introduction to Predictive Control of Complex Systems 147
9.1 Optimal Control 148
9.1.1 Hamilton-Jacobi-Bellman Equation 149
9.1.2 Optimal Control of Linear Systems 150
9.2 Predictive Control as a Simplification of a General Optimal-Control Problem 150
9.3 Use of Discrete-Time Models 151
9.4 Mechanism of the Predictive-Control Algorithms 151
9.5 Cost Function 152
9.6 Computational Complexity of the Predictive-Control Problem 153
9.7 Predictive Control of Complex Systems 154
References 154

10 Solving Mixed-Integer Optimization Problems 157
10.1 Piecewise Affine or Equivalent Models 157
10.2 Online and Offline Solving of the Optimization Problem 157
10.3 Mechanism of the Predictive-Control Algorithm 158
10.3.1 Polytopes 158
10.3.2 Mixed-Integer Optimization Problems 159
10.4 The Curse of Dimensionality 163
10.5 Case Study: Implementation on the Batch Reactor 164
10.5.1 Mathematical Model of the Batch Reactor 165
10.5.2 Limiting the Set of the Possible Input Vector Values 165
10.5.3 Control 166
10.5.4 Cost Function 166
10.5.5 Discussion 166
References 167

11 Predictive Control Based on a Reachability Analysis 169
11.1 Tree of Evolution 169
11.1.1 Development of the Tree of Evolution 169
11.1.2 Conditions That Are Checked in Every Node during the Exploration of the Tree of Evolution 171
11.1.3 Conditions That Are Checked in Every Node during the Exploration of the Tree of Evolution after a Condition Is Met 172
11.2 Reachability Analysis 173
11.3 Cost Function 173
11.3.1 Condition for Cost-Function Suitability 174
11.3.2 Cost-Function Form 174
11.4 Computational Complexity 176
11.4.1 Decreasing the Computational Complexity by Applying Reachability Analysis 177

11.4.2 Decreasing the Computational Complexity by Limiting the Number of Possible Input Vectors ... 177
11.4.3 Decreasing the Computational Complexity by Holding the Inputs through a Number of Time-Steps ... 178
11.5 Case Study: Implementation on the Batch Reactor ... 181
11.5.1 Mathematical Model of the Batch Reactor ... 181
11.5.2 Limiting the Number of Possible Input Vectors ... 181
11.5.3 Control ... 182
11.5.4 Cost Function ... 182
11.5.5 Results – Approach 1 ... 182
11.5.6 Results – Approach 2 ... 184
11.5.7 Comparison between Predictive Control Employing a Hybrid Fuzzy Model and a Hybrid Linear Model ... 186
11.5.8 Discussion ... 189
References ... 191

12 Predictive Control Based on a Genetic Algorithm ... 193
12.1 Use of a Genetic Algorithm for Optimization Problems with Discrete Variables ... 193
12.2 Optimization Mechanism Based on a Genetic Algorithm ... 194
12.3 Genetic Operators ... 194
12.3.1 Crossover ... 195
12.3.2 Mutation ... 196
12.4 Suboptimality of the Approach ... 196
12.5 Cost Function ... 197
12.6 Computational Complexity ... 197
12.6.1 Decreasing the Computational Complexity by Limiting the Number of Possible Input Vectors ... 199
12.6.2 Decreasing the Computational Complexity by Holding the Inputs through a Number of Time-Steps ... 200
12.7 Case Study: Implementation on the Batch Reactor ... 202
12.7.1 Mathematical Model of the Batch Reactor ... 202
12.7.2 Limiting the Number of Possible Input Vectors ... 202
12.7.3 Control ... 203
12.7.4 Cost Function ... 204
12.7.5 Results ... 204
12.7.6 Comparison of Predictive Control Algorithms Based on a Genetic Algorithm, a Reachability Analysis and an Explicit Enumeration ... 208
12.7.7 Discussion ... 212
References ... 213

13 Self-adaptive Predictive Control with an Online Local-Linear-Model Identification ... 215
13.1 Time-Varying Dynamical Characteristics ... 215

13.2 Self-adaptive Predictive Control Mechanism 216
13.2.1 Lienarized Model Formulation 216
13.2.2 Parameter Estimation 217
13.2.3 Predictive Functional Control Algorithm 219
13.3 Case Study: Implementation on the Batch Reactor 224
13.3.1 Modified Mathematical Model of the Batch Reactor 224
13.3.2 Kinetic Model of the Exothermic Chemical Reactions 225
13.3.3 Parameter Estimation 227
13.3.4 Predictive Functional Control Algorithm 229
13.3.5 Results 229
13.3.6 Discussion 232
References 234

14 Control Using an Inverse Hybrid Fuzzy Model 235
14.1 The Control Scheme 235
14.2 Inverse Hybrid Fuzzy Model 236
14.3 The Feedforward Part of the Control Algorithm 238
14.3.1 Reachability Matrix of the Hybrid Fuzzy Model 238
14.3.2 Adjustment of the Reference Signal 239
14.3.3 Determination of the Discrete Part of the Feedforward-Control Signal 240
14.3.4 Determination of the Continuous Part of the Feedforward-Control Signal 241
14.4 The Feedback Part of the Control Algorithm 243
14.4.1 Linearization of the Hibrid Fuzzy Model 243
14.4.2 H-Step Prediction of the Linearized Model 244
14.4.3 Incremental Model 244
14.4.4 Determination of the Feedback-Control Signal 246
14.5 Case Study: Implementation on the Batch Reactor 248
14.5.1 Mathematical Model of the Batch Reactor 248
14.5.2 Control 248
14.5.3 Results 249
14.5.4 Discussion 250
References 252

Part V Conclusion

15 Conclusion 255

A Model Parameters and Control Parameters 257
