

Architecture at the End of Moore	1
Stefanos Kaxiras	
 Part I Molecular Devices for Classical Logic	
Towards Post-CMOS Molecular Logic Devices	13
Roy Hakim, Elad. D. Mentovich, and Shachar Richter	
Quantum Interference Effects in Electron Transport: How to Select Suitable Molecules for Logic Gates and Thermoelectric Devices	25
Robert Stadler	
Mapping Electron Transport Pathways in Complex Systems	41
Gemma C. Solomon	
Switching Mechanisms for Single-Molecule Logic Gates	55
C. Toher, F. Moresco, and G. Cuniberti	
PTM Radicals for Molecular-Based Electronic Devices	71
Núria Crivillers, Marta Mas-Torrent, Cláudia Simão, Markos Paradinas, Carmen Munuera, Carmen Ocal, Stefan T. Bromley, Concepció Rovira, and Jaume Veciana	
Vibrational Heating in Single-Molecule Switches	87
Thomas Brumme, Rafael Gutiérrez, and Gianaurelio Cuniberti	
Heat Dissipation in Molecular Junctions: Linking Molecules to Macroscopic Contacts	97
Alessandro Pecchia	

Part II Molecule-Circuits

Classical Logic in a Single Molecule	109
Mohamed Hliwa and Christian Joachim	
Modeling and Simulation of Electron Transport at the Nanoscale: Illustrations in Low-Dimensional Carbon Nanostructures	123
Vincent Meunier, Eduardo Costa Girão, and Bobby G. Sumpter	

Part III Surface Dangling Bond Circuits

First-Principles Simulations of Electronic Transport in Dangling-Bond Wires	137
M. Kepenekian, R. Robles, and N. Lorente	
Dangling-Bond Logic: Designing Boolean Logic Gates on a Si(001)-(2x1):H Surface	149
Hiroyo Kawai, Francisco Ample, Christian Joachim, and Mark Saeys	
Dangling-Bond Wire Circuits on a Si(001)-(2x1):H Surface with Their Contacting Nanopads	163
Francisco Ample, Hiroyo Kawai, Kian Soon Yong, Mark Saeys, Kuan Eng Johnson Goh, and Christian Joachim	
Theory of Inelastic Transport Through Atomic Surface Wires	175
Serge Monturet and Christian Joachim	

Part IV Quantum Controlled Logic Gates

Single Molecule Can Calculate 1,000 Times Faster than Supercomputers	189
Kenji Ohmori	
Realization of Complex Logic Operations at the Nanoscale	195
R.D. Levine and F. Remacle	
Binary Full-Adder in a Single Quantum System	221
N. Renaud and C. Joachim	

Part V Molecular Qubits

A Controlled Quantum SWAP Logic Gate in a 4-center Metal Complex	237
Mohamed Hliwa, Jacques Bonvoisin, and Christian Joachim	

Artificial Molecular Nanomagnets as Spin-Based Quantum Logic Gates	249
Fernando Luis, Olivier Roubeau, and Guillem Aromí	
Toward a Molecular Ion Qubit	267
J. Mur-Petit, J. Pérez-Ríos, J. Campos-Martínez, M.I. Hernández, S. Willitsch, and J.J. García-Ripoll	
Implementing Quantum Gates and Algorithms in Ultracold Polar Molecules	279
S. Vranckx, A. Jaouadi, P. Pellegrini, L. Bomble, N. Vaeck, and M. Desouter-Lecomte
