1	Introduction to 4D Motion Modeling and 4D Radiotherapy	1
1.1	Introduction	1
1.2	Brief History of 4D CT	2
1.3	Respiratory Motion Statistics	3
1.4	Methods for 4D Thoracic CT Imaging	4
1.5	Respiratory Motion Estimation and Analysis.	7
1.6	4D CT Artifacts	8
1.6.1	Quantification of Artifact Frequency and Magnitude	8
1.6.2	Artifact Reduction Methods	10
1.7	4D CT Applications 1: Radiation Therapy	11
1.8	4D CT Applications 2: Ventilation Imaging	14
1.8.1	Rationale	14
1.8.2	Ventilation Imaging Methods	14
1.8.3	Validation of 4D CT Ventilation Imaging	15
1.9	Summary	16
	References	16

Part I 4D Image Acquisition

2	Helical 4D CT and Comparison with Cine 4D CT.	25
2.1	Introduction	25
2.2	Helical 4D CT Data Acquisition	27
2.2.1	Data Sufficiency Condition (DSC)	28
2.2.2	Data Acquisition Modes.	29
2.2.3	Image Location, Slice Thickness, and Scan Time	31
2.3	Workflow and Phase Selection Accuracy	33
2.4	Commercial Helical 4D CT Systems	35
2.5	Respiratory Monitoring Devices	37

2.6	Image Artifacts	39
2.7	Conclusions and Future Directions.	39
	References	40
3	Acquiring 4D Thoracic CT Scans Using Ciné CT Acquisition	43
3.1	Introduction	43
3.2	Benefits of Ciné CT.	44
3.3	Development of Volumetric CT Using Ciné CT Scans.	46
3.3.1	Amplitude and Phase-Angle Sorting	48
3.4	Challenges with Ciné CT	52
3.4.1	Cone-Beam Artefacts in Ciné CT	52
3.4.2	Abutment Challenges.	55
3.5	Future of Respiratory Sorting	56
	References	58
 Part II Motion Estimation and Modeling		
4	Biophysical Modeling of Respiratory Organ Motion	61
4.1	Introduction	61
4.2	Single Organ Motion as a Problem of Elasticity Theory.	63
4.2.1	Modeling Macroscopic Lung Motion.	63
4.2.2	Liver Motion	75
4.3	Multi-Organ Modeling Approaches	77
4.3.1	Straight-Forward Extension of Single- to Multi-Organ Models	77
4.3.2	Going Further Towards Realistic Biomechanics: Incorporation of Rib Cage and Diaphragm Kinematics. . .	78
4.4	Comparison to Image Registration: The Benefit of Biophysical Modeling	79
4.4.1	Comparison Studies.	79
4.4.2	Combining Both Worlds	80
	References	80
5	Feature-Based Registration Techniques.	85
5.1	Introduction	85
5.2	Feature Types	87
5.2.1	Anatomical Features	88
5.2.2	Gray Value Structure Features	89
5.3	Feature Correspondence	90
5.3.1	Iterative Closest Point and Modifications.	90
5.3.2	Shape-Based Descriptors	90
5.3.3	Gray Value Descriptors	91
5.3.4	Shape Context	93

5.3.5	Shape Constrained Deformation	93
5.3.6	Currents-Based Registration	97
5.4	Interpolation	98
5.4.1	B-Splines	98
5.4.2	Radial Basis Functions	99
5.4.3	Nearest Neighbour Interpolation	100
	References	100
6	Intensity-Based Deformable Registration: Introduction and Overview	103
6.1	Principles of Intensity-Based Deformable Registration	103
6.1.1	Introduction	103
6.1.2	General Framework	105
6.1.3	Transformation	105
6.1.4	Similarity Measure	106
6.1.5	Regularization	110
6.1.6	Optimization	112
6.2	Popular Algorithms of Deformable Image Registration	114
6.2.1	Free-Form Deformations Using Cubic B-Splines	114
6.2.2	The Demons Algorithm	115
6.3	Overview of Respiratory Motion Estimation Based on IB-DIR	116
6.4	Open-Source Software and Data Sets	117
	References	120
7	Intensity-Based Registration for Lung Motion Estimation	125
7.1	Introduction	125
7.2	Intensity-Based Registration	127
7.2.1	Preprocessing	128
7.2.2	Similarity Criteria	129
7.2.3	Transformation Constraints	134
7.2.4	Parameterization, Optimization and Multi-Resolution Scheme	136
7.3	Registration Accuracy Assessment	138
7.3.1	Evaluation Methods Used in the EMPIRE10 Challenge	138
7.3.2	Validation Using Additional Information	142
7.4	Application: Assessment of Lung Biomechanics	143
7.4.1	Displacement Vector Field	144
7.4.2	Specific Volume Change	145
7.4.3	Specific Ventilation	146
7.4.4	Strain Tensors	147
7.4.5	Anisotropy Analysis	149
7.4.6	Quantification of Lobar Sliding	151
7.5	Summary	152
	References	153

8 Validation and Comparison of Approaches to Respiratory Motion Estimation 159

8.1 Lack of a Gold-Standard in Non-Rigid Image Registration 159

8.2 Morphological Validation Criteria 162

8.2.1 Landmarks 162

8.2.2 Line-Like Anatomical Structures 166

8.2.3 Surface Structures and Volumes 168

8.3 Functional Validation Criteria 173

8.3.1 Trajectory Analysis 173

8.3.2 Deformation Vector Field Analysis 175

8.3.3 Beyond Pure Deformation 178

References 181

Part III Modeling of Motion Variability

9 Estimating Internal Respiratory Motion from Respiratory Surrogate Signals Using Correspondence Models 187

9.1 Introduction 187

9.2 Respiratory Surrogate Signals 190

9.3 Internal Motion Data 192

9.3.1 Imaging the Internal Motion 192

9.3.2 Representing the Internal Motion Data 194

9.4 Correspondence Models 195

9.4.1 Types of Model 195

9.4.2 Fitting the Correspondence Models 200

9.4.3 Indirect Correspondence Models 205

9.5 Discussion and Conclusions 206

9.5.1 Intra-Fraction Variation 207

9.5.2 Inter-Fraction Variation 207

9.5.3 Reducing Variations 208

9.5.4 Amount of Data Used to Build and Validate Models 208

9.5.5 Computation Time 209

9.5.6 Conclusion 209

References 210

10 Computational Motion Phantoms and Statistical Models of Respiratory Motion 215

10.1 Introduction 216

10.2 Computational Motion Phantoms in Radiation Therapy 217

10.2.1 Characterization of Computational Motion Phantoms 218

10.2.2 Applications of Computational Motion Phantoms in Radiation Therapy 220

10.2.3 Limitations of Computational Motion Phantoms 221

- 10.3 Generation of Population-Based Motion Models 223
 - 10.3.1 Variability of Respiratory Motion 223
 - 10.3.2 Estimation of Motion Fields 225
 - 10.3.3 The Correspondence Problem 226
 - 10.3.4 Model Computation. 230
- 10.4 Applications of Population-Based Models. 232
 - 10.4.1 Statistical Modeling of Organ Motion Using Surface-Based Registration. 232
 - 10.4.2 Statistical Modeling of Organ Motion Using Diffeomorphic Image Registration. 235
 - 10.4.3 Applications of Statistical Motion Models 238
 - 10.4.4 Summary and Discussion 240
