Preface to the Second Edition	xv
Preface to the First Edition	xvi
List of figures	xx
List of tables	xxviii

Part I	Principle Ideas	1
1	Basic equations	4
1.1	Dry air	4
1.1.1	Equation of state and thermodynamic variables	4
1.1.2	Thermodynamic variables of the ideal gas	8
1.2	Conservation laws and basic equations	11
1.2.1	Conservation law and conservation of mass	11
1.2.2	Conservation of momentum	13
1.2.3	Conservation of energy	15
1.2.4	Entropy balance	18
1.2.5	Enthalpy balance and Bernoulli's theorem	19
1.3	Angular momentum, vorticity, and divergence	20
1.3.1	Conservation of angular momentum	20
1.3.2	The circulation theorem	22
1.3.3	Vorticity equations	24
1.3.4	Potential vorticity	26
1.3.5	Divergence equation	29
	References and suggested reading	31
2	Basic balances and stability	32
2.1	Hydrostatic balance	33
2.2	Geostrophic balance and thermal wind balance	36
2.3	Stability of hydrostatic balance	40
2.4	Stability of axisymmetric flows	43
2.5	Balances and stability of parallel flows on the f -plane	52
	References and suggested reading	54
3	Approximations of equations	55
3.1	Boussinesq approximation	56
3.2	Quasi-geostrophic approximation	59
3.2.1	Scaling	59

3.2.2	Synoptic-scale quasi-geostrophic equations	60
3.2.3	Planetary-scale quasi-geostrophic equations	64
3.3	Primitive equations	65
3.3.1	The equations in spherical coordinates	65
3.3.2	Transformation of the vertical coordinate	67
3.3.3	Pressure coordinates	70
3.3.4	Sigma coordinates	71
3.3.5	Isentropic coordinates	73
3.4	Shallow-water equations	76
3.5	Appendix: Derivation of a generalized pressure gradient	78
	References and suggested reading	79
4	Waves	80
4.1	Wave theory	80
4.2	Sound waves	84
4.3	Gravity waves	87
4.3.1	Dispersion relation	87
4.3.2	Gravity waves in the hydrostatic Boussinesq approximation	90
4.3.3	Group velocity and phase speed	92
4.3.4	The structure of gravity waves	93
4.4	Inertial waves	96
4.5	Inertio-gravity waves	97
4.5.1	Dispersion relation	97
4.5.2	Inertio-gravity waves in the hydrostatic Boussinesq approximation	101
4.5.3	Group velocity and phase speed	103
4.5.4	Structure of inertio-gravity waves	104
4.6	Rossby waves	107
4.6.1	Two-dimensional Rossby waves	108
4.6.2	Rossby waves in a stratified fluid	113
4.6.3	Propagation of Rossby waves	116
4.7	Waves on a sphere	118
4.7.1	Shallow-water equations and the equation of vertical structure	118
4.7.2	Spherical waves	121
4.7.3	Equatorial waves	127
	References and suggested reading	132
5	Instability	133
5.1	Linear stability analysis	133
5.2	Convective instability	135
5.2.1	Rayleigh-Bénard convection	136
5.2.2	Convective instability in a rotating frame	142
5.3	Inertial instability	145
5.4	Barotropic instability	146

5.4.1	Formulation	147
5.4.2	Integral theorems	148
5.4.3	Instability of the flow $U = \tanh y$	150
5.4.4	Interpretation of barotropic instability	151
5.5	Baroclinic instability	153
5.5.1	Eady problem	154
5.5.2	Charney problem	167
5.5.3	Energetics	174
5.5.4	Necessary condition for instability	175
5.5.5	Interpretation of baroclinic instability	182
	References and suggested reading	183
6	Forced motions	185
6.1	Geostrophic adjustment	185
6.2	Forced motions on the f -plane	190
6.3	Axisymmetric flows	195
6.4	Forced motions on the β -plane	198
6.5	Forced motions on the equatorial β -plane	199
6.6	Ekman transport	201
	References and suggested reading	206
7	Eddy transport	207
7.1	Transport due to finite amplitude waves	207
7.1.1	Generalized Lagrangian mean	207
7.1.2	Examples of finite amplitude waves	209
7.2	Diffusion in the meridional section	216
7.2.1	Governing equations and the Eulerian mean	216
7.2.2	Tracer transport	217
7.3	Residual circulation	221
7.4	Transformed Eulerian mean equations	224
7.4.1	Generalized transformed Eulerian mean equations	224
7.4.2	Quasi-geostrophic TEM equations	227
7.5	Eulerian mean equations in isentropic coordinates	230
7.6	Appendix: Derivation of the generalized Eliassen-Palm relation	233
	References and suggested reading	235
8	Thermodynamics of moist air	236
8.1	Formulation	236
8.1.1	Definition of moist air	236
8.1.2	Basic thermodynamic equations	237
8.1.3	Thermodynamic functions of a single component	240
8.1.4	Mixing of ideal gases	241
8.1.5	Thermodynamic variables of liquid phase	244
8.1.6	Thermodynamic variables of moist air	247
8.1.7	Moist adiabat	249

8.2	Expressions of thermodynamic variables	252
8.2.1	Constants	252
8.2.2	Mass concentrations and saturation condition	254
8.2.3	Thermodynamic functions	256
8.2.4	Moist adiabat	258
	References and suggested reading	261
9	Basic equations of moist air	262
9.1	Conservation of mass variables	262
9.2	Rain process	265
9.3	Conservation of momentum	267
9.4	Conservation of energy and entropy	268
9.5	Transport process	270
9.6	Approximate equations of moist air	272
	References and suggested reading	274
10	Radiation process	276
10.1	Blackbody radiation	276
10.2	Solar radiation and planetary radiation	278
10.3	Absorption bands	278
10.4	Radiative transfer equation	280
10.5	Infrared radiation in a plane-parallel atmosphere	283
10.6	Gray radiation	286
10.7	Radiative transfer equation of solar radiation	288
	References and suggested reading	292
11	Turbulence	293
11.1	Similarity theory	293
11.1.1	Three-dimensional turbulence	293
11.1.2	Two-dimensional turbulence	295
11.1.3	Tracer spectrum	299
11.2	Turbulence models	302
11.2.1	Basic equations	302
11.2.2	Eddy diffusion coefficients and turbulence models	304
11.2.3	The Mellor and Yamada model	307
11.3	Boundary layer	310
11.3.1	Structure of the planetary boundary layer	310
11.3.2	Surface layer	311
11.3.3	Bulk method	312
11.3.4	Boundary layer models	314
	References and suggested reading	321

Part II Atmospheric Structures 323

12 Global energy budget	326
12.1 Energy budget	326
12.1.1 Effective temperature and global radiative equilibrium . . .	326
12.1.2 Energy conversion	329
12.1.3 Total potential energy	334
12.1.4 Available potential energy	338
12.2 Energy budget of a moist atmosphere	340
12.3 Entropy budget and thermal efficiency	342
12.4 Similarity theory of general circulation	346
References and suggested reading	350
13 Latitudinal energy balance	353
13.1 Energy balance model	353
13.2 Latitudinal distribution of radiative balance	355
13.3 Latitudinal temperature difference	359
13.4 Ice albedo feedback	362
13.5 Water budget	366
References and suggested reading	368
14 Vertical structure	370
14.1 Vertically one-dimensional energy balance	371
14.2 Greenhouse effect	373
14.3 Radiative equilibrium	374
14.3.1 Gray radiative equilibrium	374
14.3.2 Static stability of gray radiative equilibrium	378
14.3.3 Approximations of radiative transfer	379
14.4 Radiative-convective equilibrium	381
14.4.1 Mixing length theory	382
14.4.2 Convective adjustment	385
14.5 Radiative-convective equilibrium in a moist atmosphere	388
14.5.1 Energy balance	388
14.5.2 Convective adjustment	389
14.6 Runaway greenhouse effect	391
References and suggested reading	393
15 Moist convection	395
15.1 Circulation structures of convection	396
15.2 Static stability of a moist atmosphere	401
15.2.1 Conditional instability	401
15.2.2 Convective available potential energy: CAPE	402
15.2.3 Saturation condition in the direction of vertical motion . . .	404
15.3 Circulation structure of moist convection	406
15.3.1 Thermal structure	406

15.3.2	Mass flux	411
15.3.3	Implications for improved cumulus models	413
15.4	Mixed layer	414
	References and suggested reading	418
16	Low-latitude circulations	420
16.1	Dynamics of Walker circulation	421
16.1.1	Large-scale circulation as organized moist convection	421
16.1.2	Large-scale circulation in a nonrotating frame	424
16.2	Dynamics of Hadley circulation	426
16.2.1	Cyclostrophic balance	427
16.2.2	Large-scale circulation in a rotating system	428
16.2.3	The Held and Hou model	434
	References and suggested reading	439
17	Circulations on a sphere	441
17.1	Shallow-water equations on a sphere	442
17.2	The Hadley cell model	445
17.3	Midlatitude circulations	450
17.3.1	Momentum balance of barotropic flow	451
17.3.2	Weak nonlinear theory of Rossby waves	453
17.3.3	Propagation of Rossby waves: WKB theory	455
17.3.4	Latitudinal propagation of Rossby waves	458
17.3.5	Angular momentum change	460
17.3.6	Barotropic instability	461
17.4	Turbulence on a sphere	463
17.4.1	Turbulence on a β -plane	463
17.4.2	Two-dimensional turbulence on a sphere	467
17.5	Appendix: Expressions of friction terms on a sphere	470
	References and suggested reading	472
18	Midlatitude circulations	474
18.1	Meridional circulation	474
18.1.1	Eulerian mean circulation	474
18.1.2	Angular momentum balance between the Hadley cell and the Ferrel cell	477
18.1.3	Transformed Eulerian mean circulation	481
18.1.4	Isentropic mean circulation	483
18.2	Meridional thermal structure	488
18.2.1	Stability of a zonal symmetric state	488
18.2.2	Baroclinic adjustment	490
18.2.3	Tropopause height	492
18.3	Life cycle experiments of extratropical cyclones	495
	References and suggested reading	503

19 Global mixing	505
19.1 Potential vorticity and potential temperature	505
19.2 Lagrangian circulation	508
19.3 Stratosphere troposphere exchange	511
References and suggested reading	514
 Part III General Circulation Modeling	 516
20 Basic equations of hydrostatic general circulation models	519
20.1 Overview	519
20.2 Basic equations	521
20.2.1 Primitive equations	521
20.2.2 Alternative forms of the equations of motion	523
20.2.3 The equation for sigma velocity	524
20.2.4 The thermodynamic equation	525
20.2.5 Vorticity and divergence equations	526
20.2.6 The moisture equation	528
20.2.7 Summary of governing equations	528
References and suggested reading	529
 21 Spectral method on a sphere	 531
21.1 The spectrum method	531
21.2 Spectral expansion on a sphere	533
21.2.1 Spherical harmonics	533
21.2.2 Spectral expansion by spherical harmonics	537
21.2.3 Truncation of spectral expansion	538
21.3 Quadrature on a sphere	540
21.3.1 Gauss-Legendre method	540
21.3.2 Gauss trapezoidal quadrature	543
21.4 Spectral integration method	544
21.4.1 Nondivergent barotropic equation	544
21.4.2 Interaction coefficients method	546
21.4.3 Transform method	546
21.4.4 Procedure of the transform method	549
21.4.5 Grid number of pentagonal truncation	551
21.4.6 Aliasing	553
21.5 Conservation laws of the nondivergent barotropic equation	553
21.5.1 Vorticity	554
21.5.2 Angular momentum	554
21.5.3 Kinetic energy	556
21.5.4 Enstrophy	557
21.6 Shallow-water spectral model	558
21.7 Primitive equation spectral model	561
21.7.1 Equations of spectral models	561

21.7.2	Horizontal diffusion and conservation	563
21.8	Appendix A: Associated Legendre functions	564
21.9	Appendix B: Gaussian weights	568
	References and suggested reading	571
22	Vertical discretization of hydrostatic models	572
22.1	Conservation of primitive equations	572
22.1.1	Conservation of mass	573
22.1.2	Constraint on the vertical integral of pressure gradient . . .	574
22.1.3	Conservation of total energy	574
22.1.4	Conservation of potential temperature	576
22.2	Conservation of vertically discretized equations	577
22.2.1	Conservation of mass	577
22.2.2	Transformation to the flux form	579
22.2.3	Constraint on the vertical integral of the pressure gradient .	581
22.2.4	Hydrostatic balance	583
22.2.5	The thermodynamic equation	588
22.3	Summary	589
	References and suggested reading	591
23	Time integration methods of the spectral model	592
23.1	Time integration scheme and stability	592
23.1.1	Wave equation	593
23.1.2	Damping equation	595
23.1.3	Time filter	596
23.2	The semi-implicit scheme	596
23.2.1	Stability analysis	597
23.2.2	The shallow-water model	598
23.3	The semi-implicit method for the primitive equation model	600
23.3.1	Introduction of the semi-implicit scheme	600
23.3.2	Matrix expression of vertical discretization	602
23.3.3	A method for solving the semi-implicit scheme	604
	References and suggested reading	607
24	Nonhydrostatic modeling	608
24.1	Introduction	608
24.2	Target of this nonhydrostatic scheme	610
24.3	Numerical scheme	612
24.3.1	The basic equations	612
24.3.2	The pressure equation	613
24.3.3	Time discretization	614
24.3.4	Stability analysis of the implicit scheme	618
24.3.5	Terrain-following coordinate	621
24.4	Energy budget	623
24.4.1	Transformation of energy	623

24.4.2	Integration of total energy	624
24.4.3	Integration of entropy	625
24.5	Some results with the nonhydrostatic model	626
24.5.1	Model	626
24.5.2	One-dimensional vertical propagation of sound waves	627
24.5.3	Horizontal propagation of gravity waves	627
24.5.4	Topographic waves	630
24.5.5	Cold-bubble simulation	631
	References and suggested reading	633
25	Icosahedral grids	636
25.1	Introduction	637
25.2	Icosahedral grids	640
25.3	Numerical discretization	643
25.4	Grid modification	644
25.5	Spherical shallow-water model	650
25.6	Numerical results	651
25.6.1	Test case 2: global steady state nonlinear zonal geostrophic flow	652
25.6.2	Test case 5: zonal flow over an isolated mountain	654
	References and suggested reading	656
26	Global nonhydrostatic models	661
26.1	Introduction	662
26.2	The basic equations	664
26.2.1	Operator notation	664
26.2.2	Continuity equations	666
26.2.3	Momentum equation	667
26.2.4	Energy equation	668
26.2.5	The conservation of total energy	670
26.2.6	Summary of the governing equations	671
26.3	Governing equations	671
26.4	Numerical methods	674
26.4.1	Overview of numerical methods	674
26.4.2	Icosahedral discretization	676
26.4.3	Time integration scheme	676
26.4.4	Numerical filters	679
26.4.5	Consistency with continuity	680
26.5	Numerical results	680
	References and suggested reading	683
27	Standard experiments of atmospheric general circulation models	689
27.1	Life cycle of extratropical cyclones experiment	690
27.2	Held and Suarez experiment	693
27.3	Aquaplanet experiment	697

27.4 Atmospheric Model Intercomparison Project (AMIP)	700
References and suggested reading	701
Appendix A1: Transformation of coordinates	703
A1.1 General transformation formulas	703
A1.2 Transformation of orthogonal coordinates	706
A1.3 Basic equations in orthogonal coordinates	710
A1.4 Cylindrical coordinates	711
A1.5 Spherical coordinates	714
References and suggested reading	718
Appendix A2: Physical constants	719
Appendix A3: Meridional structure	721
Index	726
