

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Conventional Approach to the Design of Digital Filters	1
1.2	Optimal Filters	9
1.2.1	Wiener Filter	9
1.2.2	Kalman Filter	16
1.3	Adaptive Filters	27
<b>2</b>	<b>Adaptive Filtering</b>	<b>31</b>
2.1	Introduction	31
2.2	Structures of Digital Filters	31
2.2.1	Filters with Infinite Impulse Response (IIR Filters)	32
2.2.2	Filters with Finite Impulse Response (FIR Filters)	34
2.3	Criterion Function for the Estimation of FIR Filter Parameters	36
2.3.1	Mean Square Error (Risk) Criterion: MSE Criterion	37
2.3.2	Minimization of the Criterion of Mean Square Error (Risk)	39
2.4	Adaptive Algorithms for the Estimation of Parameters of FIR Filters	45
2.4.1	Least Mean Square (LMS) Algorithm	46
2.4.2	Least Squares Algorithm (LS Algorithm)	49
2.4.3	Recursive Least Squares (RLS) Algorithm	51
2.4.4	Weighted Recursive Least Squares (WRLS) Algorithm with Exponential Forgetting Factor	53
2.5	Adaptive Algorithms for the Estimation of the Parameters of IIR Filters	59
2.5.1	Recursive Prediction Error Algorithm (RPE Algorithm)	67
2.5.2	Pseudo-Linear Regression (PLR) Algorithm	72

<b>3</b>	<b>Finite Impulse Response Adaptive Filters with Variable Forgetting Factor</b>	<b>75</b>
3.1	Choice of Variable Forgetting Factor	75
3.1.1	Choice of Forgetting Factor Based on the Extended Prediction Error	76
3.1.2	Fortescue–Kershenbaum–Ydstie Algorithm	78
3.1.3	Parallel Adaptation Algorithm (PA-RLS Algorithm)	86
3.1.4	Generalized Weighted Least Squares Algorithm with Variable Forgetting Factor	93
3.1.5	Modified Generalized Likelihood Ratio: MGLR Algorithm	96
3.2	Experimental Analysis	101
3.2.1	Comparative Analysis of Recursive Algorithms for the Estimation of Variable Forgetting Factor (Analysis of RLS Algorithm with EGP, FKY and PA Strategy for the Calculation of Variable Forgetting Factor)	101
<b>4</b>	<b>Finite Impulse Response Adaptive Filters with Increased Convergence Speed</b>	<b>109</b>
4.1	Definition of the Parameter Identification Problem	110
4.2	Finite Impulse Response Adaptive Filters with Optimal Input	112
4.3	Convergence Analysis of Adaptive Algorithms	115
4.4	Application of Recursive Least Squares Algorithm with Optimal Input for Local Echo Cancellation in Scrambling Systems	131
4.4.1	Definition of the Local Echo Cancellation Problem in Scrambling Systems	133
4.4.2	Experimental Analysis	134
4.5	Application of Variable Forgetting Factor to Finite Impulse Response Adaptive Filter with Optimal Input	139
<b>5</b>	<b>Robustification of Finite Impulse Response Adaptive Filters</b>	<b>147</b>
5.1	Robust Least Mean Square Algorithm	149
5.1.1	Robustification of Least Mean Square Algorithm: Robust LMS Algorithm	152
5.1.2	Stability Analysis of Robust Estimators	155
5.1.3	Simulation-Based Experimental Analysis	158
5.2	Robust Recursive Least Squares Algorithm with Optimal Output	162
5.2.1	Experimental Analysis	168
5.3	Adaptive Estimation of the Scaling Factor in Robust Algorithms	170
5.3.1	Experimental Analysis	177

5.4	Robust Recursive Least Squares Algorithm with Variable Forgetting Factor and with Detection of Impulse Noise . . . . .	180
5.4.1	Experimental Analysis . . . . .	184
6	<b>Application of Adaptive Digital Filters for Echo Cancellation in Telecommunication Networks . . . . .</b>	<b>187</b>
6.1	Echo: Causes and Origins . . . . .	189
6.1.1	Echo in Speech Transmission . . . . .	189
6.1.2	Acoustic Echo . . . . .	191
6.1.3	Echo in Data Transfer . . . . .	192
6.1.4	Basic Principles of Adaptive Echo Cancellation . . . . .	193
6.2	Mathematical Model of an Echo Cancellation System . . . . .	196
6.3	Analysis of the Influence of Excitation Signal to the Performance of Echo Cancellation System for Speech Signal Transmission . . . . .	197
	<b>References . . . . .</b>	<b>205</b>
	<b>Index . . . . .</b>	<b>209</b>
