
Table of Contents

1	Introduction	1
1.1	Motivation	1
1.2	Problem statements.....	2
1.3	Goals.....	2
1.4	Research scope	3
1.5	Approach	4
1.6	Contributions	5
1.7	Hypotheses	6
1.8	Thesis structure	7
2	State of the practice	9
2.1	Evolution stage 1: Unplanned adaptation.....	9
2.2	Evolution stage 2: Planned adaptation	9
2.3	Evolution stage 3: Unsystematic manual adaptation op- timization.....	10
2.4	Evolution stage 4: Systematic adaptation optimization	11
3	State of the art.....	13
3.1	Safety engineering	13
3.1.1	Approach	13
3.1.2	Evaluation.....	15
3.2	Product line engineering	15
3.2.1	Approach	15
3.2.2	Evaluation.....	16
3.3	Adaptive system engineering.....	17
3.3.1	Engineering approach	17
3.3.2	Requirements.....	18
3.3.3	Decentralized adaptation.....	19
3.3.4	Time-variant adaptation	20
3.3.5	Software product line based adaptation	20
3.3.6	Goal-based adaptation.....	21
3.3.7	Rule-based adaptation	22

4	Previous work and Definitions	25
4.1	Adaptive system specification	25
4.2	Modeling language	26
4.2.1	Syntax	26
4.2.2	Semantics	28
4.3	Model construction	28
4.4	Model optimization	31
4.4.1	Verification approach	31
4.4.2	Simulation approach	31
4.5	Model implementation	32
4.6	Summary	33
5	Engineering approach	35
5.1	Overview	35
5.2	MARS model construction	35
5.2.1	Construction approach	36
5.2.2	Construction process	37
5.2.3	Supporting approaches	47
5.3	MARS model optimization	48
5.3.1	Optimization problem and approach	48
5.3.2	Optimization process	53
5.3.3	Supporting approaches	55
5.4	MARS model implementation	57
6	Modeling language	59
6.1	Syntax	59
6.1.1	Overview	59
6.1.2	Quality type system	61
6.1.3	Functional specification	63
6.1.4	Functional realization	65
6.1.5	Adaptation specification	66
6.1.6	Adaptation realization	68
6.2	Semantics	70
6.2.1	Model structure	70
6.2.2	Overview	72
6.2.3	High-level adaptation semantics	74
6.2.4	Low-level adaptation semantics	75
6.2.5	Synchronous functional semantics	80

7	Analysis for identifying reasonable system configurations	85
7.1	Overview.....	85
7.2	Identification of stable configurations.....	86
7.3	Identification of stateless configurations	90
7.4	Classification of stateless configurations	91
7.5	Identification of reasonable configuration classes.....	92
7.6	Generation of hierarchical abstraction	94
8	Approaches for selecting system configurations and identifying transitions	95
8.1	Context modeling approach	95
8.1.1	Overview	96
8.1.2	Markov models	97
8.1.3	Impact models.....	97
8.1.4	Device models.....	98
8.1.5	Context model	99
8.2	Utility analysis.....	101
8.2.1	Overview	101
8.2.2	Determination of quality constraints	102
8.2.3	Determination of Markov constraints.....	103
8.2.4	Determination of utility probabilities	103
8.2.5	Aggregation of utility probabilities.....	104
8.3	Hardware cost analysis.....	104
8.3.1	Overview	104
8.3.2	Determination of the possible device combinations	106
8.3.3	Determination of maximal adaptation specifications	107
8.3.4	Determination of the utility-hardware cost Pareto front	108
8.4	Software cost analysis.....	109
8.4.1	Overview	109
8.4.2	Reliable analysis.....	110
8.4.3	Unreliable reliable analysis	110
8.5	Realization analysis.....	113
8.5.1	Reliable analysis.....	113
8.5.2	Unreliable analysis	114

8.6	Verification approach.....	115
8.6.1	Well-definedness	116
8.6.2	Verification of well-definedness.....	116
8.7	Simulation approach.....	117
8.7.1	Modeling of adaptation trigger scenarios	117
8.7.2	Simulation of adaptation trigger scenarios.....	118
8.7.3	Visualization of adaptation action scenarios.....	119
8.8	Monte-Carlo simulation approach	119
8.8.1	Overview	120
8.8.2	Adaptation trigger scenario generation	121
8.8.3	Determination of the scenario length	122
8.8.4	Determination of the scenario numbers.....	123
9	Approach for implementing adaptation	125
9.1	Overview.....	125
9.2	Adaptation subsystem	127
9.2.1	Functional subsystem	129
10	Tool support	131
10.1	Adaptation modeling approach	131
10.2	Context modeling approach	131
10.3	Utility analysis	132
10.4	Simulation approach.....	132
10.5	Monte-Carlo simulation approach	132
10.6	Construction and exploration analyses.....	133
10.7	Verification approach.....	133
10.8	Implementation approach	133
11	Evaluation	135
11.1	Case Studies	135
11.1.1	Electronic stability control system.....	135
11.1.2	Vehicle stability control system	135
11.1.3	Emergency call system.....	136
11.2	Evaluation of the goals	136
11.2.1	Identification of all optimal system configurations ..	136
11.2.2	Utility-cost optimized selection of system configurations.....	139
11.2.3	Implementation of system configurations	140

11.3	Reflection on the Solutions.....	141
11.3.1	Identification of all optimal system configurations ..	141
11.3.2	Utility-cost optimized selection of system configurations.....	142
11.3.3	Implementation of system configurations	142
12	Related work.....	143
12.1	ROSES	143
12.2	ARDEA.....	144
12.3	Assured reconfiguration for survivability.....	144
12.4	Mechatronic UML	145
12.5	Chameleon	146
12.6	EVAS	147
13	Conclusions and future work.....	149
13.1	Conclusion	149
13.2	Future Work	150
