1	Variational Formulations and Finite Element Methods	1
1.1	Classical Methods	1
1.2	Model Problems and Elementary Properties of Some Functional Spaces	3
1.2.1	Eigenvalue Problems	15
1.3	Duality Methods	16
1.3.1	Generalities	16
1.3.2	Examples for Symmetric Problems	19
1.3.3	Duality Methods for Non Symmetric Bilinear Forms	28
1.3.4	Mixed Eigenvalue Problems	29
1.4	Domain Decomposition Methods, Hybrid Methods	31
1.5	Modified Variational Formulations	37
1.5.1	Augmented Formulations	38
1.5.2	Perturbed Formulations	45
1.6	Bibliographical Remarks	46
2	Function Spaces and Finite Element Approximations	47
2.1	Properties of the Spaces $H^m(\Omega)$, $H(\text{div}; \Omega)$, and $H(\text{curl}; \Omega)$	47
2.1.1	Basic Properties	47
2.1.2	Properties Relative to a Partition of Ω	55
2.1.3	Properties Relative to a Change of Variables	58
2.1.4	De Rham Diagram	64
2.2	Finite Element Approximations of $H^1(\Omega)$ and $H^2(\Omega)$	65
2.2.1	Conforming Methods	65
2.2.2	Explicit Basis Functions on Triangles and Tetrahedra	73
2.2.3	Nonconforming Methods	74
2.2.4	Quadrilateral Finite Elements on Non Affine Meshes	77
2.2.5	Quadrilateral Approximation of Scalar Functions	79
2.2.6	Non Polynomial Approximations	80
2.2.7	Scaling Arguments	82

2.3	Simplicial Approximations of $H(\text{div}; \Omega)$ and $H(\text{curl}; \Omega)$	84
2.3.1	Simplicial Approximations of $H(\text{div}; \Omega)$	84
2.3.2	Simplicial Approximation of $H(\text{curl}; \Omega)$	92
2.4	Approximations of $H(\text{div}; K)$ on Rectangles and Cubes	96
2.4.1	Raviart-Thomas Elements on Rectangles and Cubes	97
2.4.2	Other Approximations of $H(\text{div}; K)$ on Rectangles	98
2.4.3	Other Approximations of $H(\text{div}; K)$ on cubes	101
2.4.4	Approximations of $H(\text{curl}; K)$ on Cubes	101
2.5	Interpolation Operator and Error Estimates	103
2.5.1	Approximations of $H(\text{div}; K)$	103
2.5.2	Approximation Spaces for $H(\text{div}; \Omega)$	109
2.5.3	Approximations of $H(\text{curl}; \Omega)$	110
2.5.4	Approximation Spaces for $H(\text{curl}; \Omega)$	113
2.5.5	Quadrilateral and Hexahedral Approximation of Vector-Valued Functions in $H(\text{div}; \Omega)$ and $H(\text{curl}; \Omega)$	114
2.5.6	Discrete Exact Sequences	115
2.6	Explicit Basis Functions for $H(\text{div}; K)$ and $H(\text{curl}; K)$ on Triangles and Tetrahedra	116
2.6.1	Basis Functions for $H(\text{div}; K)$: The Two-Dimensional Case	117
2.6.2	Basis Functions for $H(\text{div}; K)$: The Three-Dimensional Case	119
2.6.3	Basis Functions for $H(\text{curl}; K)$: The Two-Dimensional Case	120
2.6.4	Basis Functions for $H(\text{curl}; K)$: The Three-Dimensional Case	120
2.7	Concluding Remarks	121
3	Algebraic Aspects of Saddle Point Problems	123
3.1	Notation, and Basic Results in Linear Algebra	126
3.1.1	Basic Definitions	126
3.1.2	Subspaces	127
3.1.3	Orthogonal Subspaces	129
3.1.4	Orthogonal Projections	130
3.1.5	Basic Results	132
3.1.6	Restrictions of Operators	136
3.2	Existence and Uniqueness of Solutions: The Solvability Problem	140
3.2.1	A Preliminary Discussion	141
3.2.2	The Necessary and Sufficient Condition	142
3.2.3	Sufficient Conditions	144
3.2.4	Examples	146
3.2.5	Composite Matrices	148

3.3	The Solvability Problem for Perturbed Matrices	151
3.3.1	Preliminary Results	151
3.3.2	Main Results	153
3.3.3	Examples	154
3.4	Stability	155
3.4.1	Assumptions on the Norms	157
3.4.2	The <i>inf-sup</i> Condition for the Matrix B : An Elementary Discussion	161
3.4.3	The <i>inf-sup</i> Condition and the Singular Values	164
3.4.4	The Case of A Elliptic on the Whole Space	166
3.4.5	The Case of A Elliptic on the Kernel of B	172
3.4.6	The Case of A Satisfying an <i>inf-sup</i> on the Kernel of B	174
3.5	Additional Results	176
3.5.1	Some Necessary Conditions	176
3.5.2	The Case of B Not Surjective. Modification of the Problem	177
3.5.3	Some Special Cases	178
3.5.4	Composite Matrices	181
3.6	Stability of Perturbed Matrices	183
3.6.1	The Basic Estimate	183
3.6.2	The Symmetric Case for Perturbed Matrices	190
4	Saddle Point Problems in Hilbert Spaces	197
4.1	Reminders on Hilbert Spaces	197
4.1.1	Scalar Products, Norms, Completeness	198
4.1.2	Closed Subspaces and Dense Subspaces	201
4.1.3	Orthogonality	202
4.1.4	Continuous Linear Operators, Dual spaces, Polar Spaces	205
4.1.5	Bilinear Forms and Associated Operators; Transposed Operators	210
4.1.6	Dual Spaces of Linear Subspaces	215
4.1.7	Identification of a Space with its Dual Space	218
4.1.8	Restrictions of Operators to Closed Subspaces	219
4.1.9	Quotient Spaces	221
4.2	Existence and Uniqueness of Solutions	223
4.2.1	Mixed Formulations in Hilbert Spaces	223
4.2.2	Stability Constants and <i>inf-sup</i> Conditions	226
4.2.3	The Main Result	228
4.2.4	The Case of $\text{Im} B \neq Q'$	230
4.2.5	Examples	232
4.3	Existence and Uniqueness for Perturbed Problems	238
4.3.1	Regular Perturbations	238
4.3.2	Singular Perturbations	257

5	Approximation of Saddle Point Problems	265
5.1	Basic Results	266
5.1.1	The Basic Assumptions	266
5.1.2	The Discrete Operators	269
5.2	Error Estimates for Finite Dimensional Approximations	273
5.2.1	Discrete Stability and Error Estimates	273
5.2.2	Additional Error Estimates for the Basic Problem	276
5.2.3	Variants of Error Estimates	279
5.2.4	A Simple Example	285
5.2.5	An Important Example: The Pressure in the Homogeneous Stokes Problem	293
5.3	The Case of $\text{Ker} B_h' \neq \{0\}$	295
5.3.1	The Case of $\text{Ker} B_h' \subseteq \text{Ker} B'$	295
5.3.2	The Case of $\text{Ker} B_h' \not\subseteq \text{Ker} B'$	297
5.3.3	The Case of β_h or $\tilde{\beta}_h$ going to zero	299
5.4	The <i>inf-sup</i> Condition: Criteria	301
5.4.1	Some Linguistic Considerations	301
5.4.2	General Considerations	302
5.4.3	The <i>inf-sup</i> Condition and the <i>B</i> -Compatible Interpolation Operator Π_h	303
5.4.4	Construction of Π_h	305
5.4.5	An Alternative Strategy: Switching Norms	306
5.5	Extensions of Error Estimates	309
5.5.1	Perturbed Problems	309
5.5.2	Penalty Methods	312
5.5.3	Singular Perturbations	315
5.5.4	Nonconforming Methods	317
5.5.5	Dual Error Estimates	323
5.6	Numerical Properties of the Discrete Problem	326
5.6.1	The Matrix Form of the Discrete Problem	327
5.6.2	And if the <i>inf-sup</i> Condition Does Not Hold?	329
5.6.3	Solution Methods	331
5.7	Concluding Remarks	335
6	Complements: Stabilisation Methods, Eigenvalue Problems	337
6.1	Augmented Formulations	337
6.1.1	An Abstract Framework for Stabilised Methods	337
6.1.2	Stabilising Terms	339
6.1.3	Stability Conditions for Augmented Formulations	342
6.1.4	Discretisations of Augmented Formulations	346
6.1.5	Stabilising with the “Element-Wise Equations”	350
6.2	Other Stabilisations	355
6.2.1	General Stability Conditions	355
6.2.2	Stability of Discretised Formulations	358

6.3	Minimal Stabilisations	360
6.3.1	Another Form of Minimal Stabilisation	374
6.4	Enhanced Strain Methods	379
6.5	Eigenvalue Problems	381
6.5.1	Some Classical Results	384
6.5.2	Eigenvalue Problems in Mixed Form	385
6.5.3	Special Results for Problems of Type $(f, 0)$ and $(0, g)$	387
6.5.4	Eigenvalue Problems of the Type $(f, 0)$	389
6.5.5	Eigenvalue Problems of the Form $(0, g)$	392
7	Mixed Methods for Elliptic Problems	401
7.1	Non-standard Methods for Dirichlet's Problem	401
7.1.1	Description of the Problem	401
7.1.2	Mixed Finite Element Methods for Dirichlet's Problem	403
7.1.3	Eigenvalue Problem for the Mixed Formulation	408
7.1.4	Primal Hybrid Methods	410
7.1.5	Primal Macro-hybrid Methods and Domain Decompositions	419
7.1.6	Dual Hybrid Methods	420
7.2	Numerical Solutions	426
7.2.1	Preliminaries	426
7.2.2	Inter-element Multipliers	426
7.3	A Brief Analysis of the Computational Effort	430
7.4	Error Analysis for the Multiplier	432
7.5	Error Estimates in Other Norms	437
7.6	Application to an Equation Arising from Semiconductor Theory	439
7.7	Using Anisotropic Meshes	441
7.8	Relations with Finite Volume Methods	445
7.8.1	The One and Two-Dimensional Cases	446
7.8.2	The Two-Dimensional Case	447
7.8.3	The Three-Dimensional Case	452
7.9	Nonconforming Methods: A Trap to Avoid	453
7.10	Augmented Formulations (Galerkin Least Squares Methods)	455
7.11	A Posteriori Error Estimates	457
8	Incompressible Materials and Flow Problems	459
8.1	Introduction	460
8.2	The Stokes Problem as a Mixed Problem	462
8.2.1	Mixed Formulation	462
8.3	Some Examples of Failure and Empirical Cures	466
8.3.1	Continuous Pressure: The $\underline{P}_1 - P_1$ Element	466
8.3.2	Discontinuous Pressure: The $\underline{P}_1 - P_0$ Approximation	467

8.4	Building a B-Compatible Operator: The Simplest Stable Elements	468
8.4.1	Building a B-Compatible Operator	469
8.4.2	A Stable Case: The MINI Element	470
8.4.3	Another Stable Approximation: The Bi-dimensional $\underline{P}_2 - P_0$ Element	471
8.4.4	The Nonconforming $\underline{P}_1 - P_0$ Approximation	475
8.5	Other Techniques for Checking the <i>inf-sup</i> Condition	477
8.5.1	Projection onto Constants	477
8.5.2	Verfürth's Trick	478
8.5.3	Space and Domain Decomposition Techniques	480
8.5.4	Macro-element Technique.....	482
8.5.5	Making Use of the Internal Degrees of Freedom	484
8.6	Two-Dimensional Stable Elements	486
8.6.1	Continuous Pressure Elements	487
8.6.2	Discontinuous Pressure Elements.....	488
8.6.3	Quadrilateral Elements, $\underline{Q}_k - P_{k-1}$ Elements	489
8.7	Three-Dimensional Stable Elements	491
8.7.1	Continuous Pressure 3-D Elements	491
8.7.2	Discontinuous Pressure 3-D Elements.....	491
8.8	$\underline{P}_k - P_{k-1}$ Schemes and Generalised Hood-Taylor Elements	494
8.8.1	Discontinuous Pressure $\underline{P}_k - P_{k-1}$ Elements	494
8.8.2	Generalised Hood-Taylor Elements	496
8.9	Other Developments for Divergence-Free Stokes Approximation and Mass Conservation	504
