## II Physical Modelling 109

### 4 Applications to Musical Instruments 113

#### 5 Finite-Difference Simulation 117

|     |                                         |     |
|-----|-----------------------------------------|-----|
| 5.1 | Method . . . . .                        | 117 |
| 5.2 | Static Solution . . . . .               | 119 |
| 5.3 | Eigenvalue Solution . . . . .           | 120 |
| 5.4 | Time Dependent Solution . . . . .       | 122 |
| 5.5 | External and Internal Damping . . . . . | 124 |
| 5.6 | Example of a Horn Radiation . . . . .   | 125 |

#### 6 Finite-Element Simulation 133

|     |                                    |     |
|-----|------------------------------------|-----|
| 6.1 | Method . . . . .                   | 134 |
| 6.2 | Static Solution . . . . .          | 140 |
| 6.3 | Eigenvalue Analysis . . . . .      | 145 |
| 6.4 | Time-Dependent Solutions . . . . . | 146 |
| 6.5 | Moving Mesh . . . . .              | 147 |
| 6.6 | Contact Problems . . . . .         | 147 |
| 6.7 | Nonlinear Solver . . . . .         | 148 |

## III Musical Acoustics 155

### 7 Musical Instruments 157

|       |                                                          |     |
|-------|----------------------------------------------------------|-----|
| 7.1   | General . . . . .                                        | 157 |
| 7.1.1 | Pitch Winner of Coupled Oscillator . . . . .             | 158 |
| 7.1.2 | Damping as Cause of Self-organization . . . . .          | 158 |
| 7.1.3 | General Musical Instrument Models . . . . .              | 159 |
| 7.2   | Guitar . . . . .                                         | 164 |
| 7.2.1 | Initial Transient . . . . .                              | 164 |
| 7.2.2 | String/Body Coupling Higher Order Terms . . . . .        | 170 |
| 7.2.3 | Coupling of Body Bending to Longitudinal Waves . . . . . | 171 |
| 7.2.4 | Nonlinear Coupling between String Modes . . . . .        | 174 |
| 7.2.5 | Large String Displacement . . . . .                      | 179 |
| 7.2.6 | Radiation Patterns of Forced Oscillations . . . . .      | 181 |
| 7.2.7 | Fractal Dimensions of Guitar Tones . . . . .             | 189 |

|        |                                                                      |     |
|--------|----------------------------------------------------------------------|-----|
| 7.3    | Violin . . . . .                                                     | 198 |
| 7.3.1  | Bow – String Interaction . . . . .                                   | 198 |
| 7.3.2  | Initial Transient of Bowing . . . . .                                | 202 |
| 7.3.3  | Finite-Difference Violin String/Bow<br>and Body Model . . . . .      | 203 |
| 7.3.4  | Bow-String Finite-Difference Model . . . . .                         | 207 |
| 7.3.5  | Fractal Dimensions of Violin Tones . . . . .                         | 214 |
| 7.4    | Wind Instruments . . . . .                                           | 220 |
| 7.4.1  | Reed Instruments . . . . .                                           | 220 |
| 7.4.2  | Reed Characteristics . . . . .                                       | 223 |
| 7.4.3  | Multiphonics in Reed Instruments . . . . .                           | 226 |
| 7.4.4  | Fractal Dimensions of Multiphonics . . . . .                         | 227 |
| 7.4.5  | Mirlitons . . . . .                                                  | 227 |
| 7.4.6  | Fractal Dimensions of Saxophone Tones . . . . .                      | 229 |
| 7.4.7  | Tone Transition with a Clarinet . . . . .                            | 230 |
| 7.4.8  | Labium and Self-sustained Oscillation . . . . .                      | 237 |
| 7.4.9  | The Labium as a Raynolds-Averaged Navier-Stokes<br>Problem . . . . . | 243 |
| 7.4.10 | The $k - \epsilon$ Model . . . . .                                   | 244 |
| 7.4.11 | RANS Finite-Element Model of the Flute . . . . .                     | 247 |
| 7.4.12 | Self-organization Order Parameter . . . . .                          | 252 |
| 7.4.13 | Synchronization of Organ Pipes . . . . .                             | 253 |
| 7.4.14 | Shock Waves in Brass Instruments . . . . .                           | 254 |
| 7.5    | Piano . . . . .                                                      | 259 |
| 7.6    | Singing Voice . . . . .                                              | 261 |
| 7.6.1  | Onset Bifurcation . . . . .                                          | 261 |
| 7.6.2  | Vocal Folds Oscillation as Hopf Bifurcation . . . . .                | 263 |
| 7.6.3  | Two-Mass Model of Vocal Folds . . . . .                              | 265 |
| 7.6.4  | Asymmetric Vocal Folds: Rough Voice and<br>Subharmonics . . . . .    | 266 |
| 7.6.5  | Hysteresis Loop of Singing Onset and Offset . . . . .                | 267 |
| 7.6.6  | Global Fractal Dimensions of Vocal Fold<br>Vibrations . . . . .      | 270 |
| 7.7    | Percussion . . . . .                                                 | 274 |
| 7.7.1  | Mode Coupling in Gongs, Cymbals, or Genders . . . . .                | 274 |
| 7.7.2  | Subharmonics and Chaotic Motion in Gongs<br>and Cymbals . . . . .    | 276 |
| 7.7.3  | Pitch Glides with Gongs . . . . .                                    | 278 |
| 7.7.4  | Pitch Glides in Drums . . . . .                                      | 282 |
| 7.7.5  | Friction Instruments . . . . .                                       | 282 |
| 7.7.6  | Energy Transfer from Drum Membranes to Their<br>Shells . . . . .     | 283 |

|           |                                                 |            |
|-----------|-------------------------------------------------|------------|
| <b>8</b>  | <b>Impulse Pattern Formulation</b>              | <b>285</b> |
