

Table of Contents

Introduction: Nano- (and micro-)materials and human wellbeing — 1

1	Coating antibacterial nanoparticles on textiles: Towards the future hospital in which all textiles will be antibacterial — 3
1.1	Introduction: Application of nanotechnology for “smart” textiles — 3
1.2	Sonochemical method for the synthesis of nanostructured materials and their adherence to solid substrates — 6
1.3	Ultrasound assisted deposition of metal nano-oxides on textiles and their antibacterial properties — 8
1.3.1	Synthesis and deposition of CuO nanoparticles — 8
1.3.2	Finishing of textiles with crystalline TiO ₂ nanoparticles via a one-step process — 10
1.3.3	Synthesis and deposition of ZnO — 16
1.3.4	Enzymatic pretreatment as a means of enhancing antibacterial activity and stability of ZnO nanoparticles sonochemically coated on cotton fabrics — 22
1.3.5	Size dependence of the antibacterial activity of ZnO NPs — 28
1.4	Conclusion — 28
	Bibliography — 29
2	Automated solutions for high-throughput experimentation in heterogeneous catalyst research — 35
2.1	Introduction — 35
2.2	The preparation of solid catalysts — 37
2.3	Automation challenges examples — 37
2.3.1	Integration of commercially available devices — 38
2.4	A fully-automated solution — 39
2.4.1	SOPHAS-CAT HT — 39
2.4.2	The loading — 39
2.4.3	The synthesizer — 40
2.4.4	Extrudate preparation — 41
2.4.5	Impregnation and drying — 41
2.4.6	Calcination — 42
2.4.7	Scraping and pelletizing — 42
2.4.8	Grinding — 43
2.4.9	Sieving — 43
2.5	Conclusion — 44
	Bibliography — 45

3	Insights from XPS on nanosized inorganic materials — 47
3.1	Introduction — 47
3.2	XPS in the nanodomain — 47
3.3	Conclusions — 53
	Bibliography — 55
4	Single crystal and powder XRD techniques: An overview — 57
4.1	The single crystal XRD technique — 57
4.1.1	Basics of the radiation-matter interaction — 58
4.1.2	Basics of crystallography and X-ray diffraction by crystal — 61
4.1.3	Solving the phase problem by direct methods — 69
4.2	The powder XRD technique — 74
4.2.1	Indexation — 74
4.2.2	Space group determination — 76
4.2.3	Profile decomposition and intensity extraction — 77
4.2.4	Structure solution — 79
4.2.5	Rietveld refinement — 84
4.2.6	Examples — 85
4.3	Conclusions — 88
	Bibliography — 89
5	Structural and electronic characterization of nanosized inorganic materials by X-ray absorption spectroscopies — 93
5.1	Introduction — 93
5.2	XAS spectroscopy: Basic background — 93
5.2.1	Theoretical background of XAS spectroscopy — 94
5.2.2	The XANES region — 96
5.2.3	The EXAFS region — 96
5.2.4	Advantages and drawbacks of the technique — 99
5.3	CuCl ₂ /Al ₂ O ₃ -based catalysts for ethylene oxychlorination — 100
5.3.1	Industrial relevance of the CuCl ₂ /Al ₂ O ₃ system — 100
5.3.2	Preliminary <i>in situ</i> XAFS experiments — 101
5.3.2.1	The determination of the Cu-aluminate phase: How to avoid possible pitfalls in the EXAFS data analysis — 101
5.3.2.2	Catalyst reactivity with the separate reactants: <i>In situ</i> XAFS experiments — 103
5.3.3	Operando experiments and criteria used to face the presence of more than one phase in the sample — 105
5.4	Structural and electronic configuration of Cp ₂ Cr molecules encapsulated in PS and Na-Y zeolite and their reactivity towards CO — 109
5.4.1	Structure of Cp ₂ Cr encapsulated in PS and Na-Y zeolite matrices — 109

5.4.2	Determination of the electronic structure of Cp_2Cr by combined UV-Vis and XANES spectroscopies —	111
5.4.3	Reactivity of Cp_2Cr hosted in PS and in Na-Y zeolite towards CO: IR and XAFS results —	114
5.5	Transition metal complexes in solution: The $[\text{cis-Ru}(\text{bpy})_2(\text{py})_2]^{2+}$ case study —	117
5.5.1	Structure refinement of $\text{cis-}[\text{Ru}(\text{bpy})_2(\text{py})_2]^{2+}$ in aqueous solution by EXAFS spectroscopy —	118
5.5.2	Advanced details of the EXAFS structure refinement of $\text{cis-}[\text{Ru}(\text{bpy})_2(\text{py})_2]^{2+}$ complex —	120
5.6	EXAFS study on MOFs of the UiO-66/UiO-67 family: comparison with XRPD and ab initio investigations —	122
5.7	Applications of X-ray micro beams: Electroabsorption modulated laser for optoelectronic devices —	127
	Bibliography —	129
6	Lens-less scanning X-ray microscopy with SAXS and WAXS contrast —	137
6.1	Introduction —	137
6.2	X-ray microscopes —	138
6.3	Small-angle and wide-angle scattering contrast (SAXS and WAXS) —	143
6.4	Applications —	149
	Bibliography —	154
7	Characterization of inorganic nanostructured materials by electron microscopy —	157
7.1	Introduction —	157
7.2	Electron microscopy —	158
7.2.1	Working principles —	159
7.3	Scanning electron microscopy —	161
7.3.1	Magnification and resolution of SEM —	163
7.3.2	Interaction of the electron beam with the sample: elastic and inelastic scattering —	163
7.3.2.1	Secondary electrons and their detection —	164
7.3.2.2	Backscattered electrons and their detection —	166
7.3.2.3	Energy loss —	167
7.4	Transmission electron microscopy —	167
7.4.1	The instrument —	168
7.4.2	Image formation process —	169
7.5	Sample preparation for electron microscopy —	174
7.5.1	SEM sample preparation —	174
7.5.1.1	Casting —	174

7.5.1.2	Ion sputtering —	175
7.5.2	Sample preparation for TEM —	175
7.6	Inorganic nanocrystal investigation by SEM —	177
7.7	Inorganic nanocrystal investigation by TEM —	186
7.7.1	Bright field mode —	186
7.7.2	Dark field contrast mode —	189
7.7.3	Diffraction mode – electron diffraction —	190
7.7.3.1	Selected area diffraction —	191
7.7.3.2	Convergent beam electron diffraction —	191
7.7.3.3	Investigating crystalline structure: High-resolution TEM —	192
7.8	Chemical analysis by electron microscopy —	193
7.8.1	Energy dispersion spectroscopy (EDS) —	193
7.8.2	Electron energy loss spectroscopy (EELS) —	194
7.8.3	Energy-filtered transmission electron microscopy (EFTEM) —	195
7.8.4	Some examples of chemical analysis in electron microscopy —	195
7.9	Conclusions —	197
	Bibliography —	197
8	Nanosized particles: questioned for their potential toxicity, but some are applied in biomedicine —	199
8.1	Introduction —	199
8.2	Nanoparticles classification —	199
8.3	Nanoparticles and biosystems —	201
8.4	Stability and toxicity —	202
8.5	Fields of application of engineered nanoparticles —	203
8.6	Access to bio-organisms and toxicity to organisms —	204
8.7	Applications of nanoparticles in biomedicine —	205
8.8	Measurement of the concentration —	206
8.9	Conclusions —	206
	Bibliography —	207
	Index —	211
