

Contents

1. Introduction	5
2. Fundamentals and theory	9
2.1. Optical properties of GaAs	9
2.1.1. Magneto-optic Kerr effect	10
2.2. Spin relaxation in n-GaAs	12
2.2.1. D'yakonov-Perel' mechanism	14
2.3. Spin drift and diffusion	15
2.4. Spin injection into GaAs	18
2.4.1. Conductivity mismatch	18
2.4.2. Tunnel barrier	20
2.4.3. Spin accumulation	21
2.5. Fe/n-GaAs Schottky contact	22
2.5.1. Schottky contact under applied bias	23
2.5.2. Spin-dependent tunneling	25
2.6. (Ga,Mn)As/n-GaAs Esaki diode	27
2.6.1. Spin-dependent tunneling	28
3. Methods	31
3.1. Film growth	31
3.1.1. Fe/GaAs	32
3.1.2. (Ga,Mn)As/GaAs	32
3.1.3. Optical access to the cleaved edge plane	33
3.2. Experimental setup	34
3.3. Depth of pMOKE detection	37
3.4. Absorbed laser power	38
3.5. Hanle effect	40
3.5.1. Magnetic anisotropy	41
3.5.2. Influences on Hanle lineshape	43
4. Experimental results	45
4.1. Fe and (Ga,Mn)As as injector materials	45
4.1.1. Sample preparation	45
4.1.2. Spin density distribution	46
4.1.3. Bias dependence	50

4.1.4. Hanle effect measurements	52
4.2. Nonuniform current density	55
4.2.1. Spin density distribution	56
4.2.2. Hanle measurements	58
4.2.3. Two-dimensional simulation	58
4.3. Spin solar cell and spin photodiode effect	64
4.3.1. Spin solar cell	67
4.3.2. Electrical detection	73
4.3.3. Spin photodiode	79
4.3.4. Towards spintronic application	82
4.4. Alternative spin injection methods from Fe into n-GaAs	83
4.4.1. Electrical spin injection	84
4.4.2. Thermal spin injection	86
4.4.3. Spin pumping	93
4.5. Spin injection into a two-dimensional electron gas	98
4.5.1. Spin density distribution	100
4.5.2. Spin lifetime	102
5. Summary and outlook	105
A. Appendix	109
A.1. MBE picture	109
A.2. Optical setup picture	110
