

CONTENTS

INTRODUCTION	7
THEORY: Transport across quantum-dots	13
1 Generalised fourth order quantum master equation	15
1.1 Model and generalised master equation	15
1.2 Derivation of the fourth order quantum master equation	18
1.3 The role of coherences	22
2 Diagrammatic analysis	25
2.1 Kernel components and diagrammatic representation	25
2.2 Intermezzo: Gain and loss relations	31
2.3 Grouping of diagrams	33
2.4 Relation to a T-matrix based rate approach	48
2.5 Conclusion	53
APPLICATION:	
Transport phenomena in interacting quantum-dots	57
3 Minimal model systems	59
3.1 Quantum single-dots	59
3.2 Quantum double-dots	63
3.3 Conclusion	73
4 Carbon armchair nanoribbons	77
4.1 Charge carriers in the graphene honeycomb lattice	78
4.2 The low energy theory of ACNRs	80
4.3 The spectrum of ACNRs	94
4.4 Transport across quantum-dot ACNRs	101
4.5 Conclusion	108
5 Single wall carbon armchair nanotubes	111
5.1 The low energy theory of SWCNTs	112
5.2 Low energy spectrum	115
5.3 Transport across quantum-dot SWCNTs	118
5.4 Conclusion	130

ACKNOWLEDGEMENT	133
------------------------	------------

APPENDIX	135
-----------------	------------

APPENDIX A: Transport theory	135
-------------------------------------	------------

A.1 Derivation of the quantum master equation	135
---	-----

A.2 Contributions to the kernel	139
---	-----

A.3 Diagram grouping	175
--------------------------------	-----

APPENDIX B: Carbon armchair nanoribbons	181
--	------------

B.1 Matrix elements of the non-diagonal bulk-bulk interaction	181
---	-----

B.2 Matrix elements of the non-diagonal end-bulk interaction	185
--	-----
