Preface *XI*

Units *XV*

1	Clusters in Nature	1
1.1	Atoms, Molecules and Bulk	3
1.1.1	Scales of Matter Down to Atoms	4
1.1.2	More on Time Scales	5
1.1.3	Binding in Atoms, Molecules and Bulk	7
1.2	A New State of Matter?	12
1.2.1	From Atom to Bulk, Small and Large Clusters	12
1.2.2	Cluster Types	15
1.2.3	Cluster Science	18
2	Measuring Clusters	21
2.1	Cluster Production	22
2.1.1	Cluster Sources	23
2.1.2	Sizes and Temperatures	27
2.2	Excitations of a Cluster	30
2.2.1	Collisions with Projectiles	31
2.2.2	Laser Fields	32
2.2.3	Coupling to Light and Optical Response	34
2.3	Measuring Cluster Properties	36
2.3.1	Mass Distributions	37
2.3.2	Magnetic Moments	38
2.3.3	Photon Signals	40
2.3.4	Electron Signals	43
3	How to Describe Clusters	47
3.1	Approximations for the Ions	48
3.1.1	The Adiabatic, or Born–Oppenheimer, Approximation	48
3.1.2	Born–Oppenheimer Dynamics	49
3.1.3	Beyond the Born–Oppenheimer Approximation	50
3.1.4	Structure Optimization	51
3.1.5	Approaches Eliminating Electrons	52

3.2	Approximation Chain for Electrons	53
3.2.1	Overview of Approaches for the Electronic Subsystem	54
3.2.2	Ab initio Methods	55
3.2.3	Phenomenological Electronic Shell Models	58
3.2.4	Density Functional Theory	59
3.2.5	Semiclassical Approaches	64
3.3	Approximation Chain for the Ion–Electron Coupling	64
3.3.1	Pseudopotentials	65
3.3.2	Jellium Approach to the Ionic Background	67
3.4	Observables	70
3.4.1	Energies	70
3.4.2	Shapes	70
3.4.3	Stationary Response: Polarizability and Conductivity	71
3.4.4	Linear Response: Optical Absorption Spectra	72
3.4.5	Electron Emission	74
4	Some Properties of Free Clusters	77
4.1	Ionic and Electronic Structure	77
4.1.1	Magic Numbers	77
4.1.2	Shell Structure and Deformation	80
4.2	Optical Response	82
4.2.1	Basic Features	82
4.2.2	Impact of Deformation	84
4.2.3	Thermal Shape Fluctuations	86
4.2.4	The Width of the Mie Plasmon Resonance	87
4.3	Photoinduced Electron Emission	88
4.3.1	Total Ionization	88
4.3.2	Photoelectron Spectra (PES)	89
4.3.3	Photoelectron Angular Distributions (PAD)	91
4.4	Cluster Nonlinear Dynamics	93
4.4.1	Tunability of Lasers	94
4.4.2	On Ionization Mechanisms	95
4.4.3	Production of Energetic Ions and High Charge States	97
4.4.4	Variation of Pulse Profile	99
5	Clusters in Contact with Other Materials	101
5.1	Embedded and/or Deposited Clusters	101
5.1.1	On the Relevance of Embedded or Deposited Clusters	101
5.1.2	The Impact of Contact with Another Material	102
5.1.3	From Observation to Manipulation	107
5.2	On the Description of Embedded/Deposited Clusters	111
5.2.1	Brief Review of Methods	111
5.2.2	An Example of QM/MM for Modeling of Deposited/Embedded Clusters	114
5.2.3	A Few Typical Results	117
5.3	Clusters and Nanosystems	119

5.3.1	Towards More Miniaturization	120
5.3.2	On Catalysis	121
5.3.3	Metal Clusters as Optical Tools	124
5.3.4	Composite Clusters and Nanomaterials	125
6	Links to Other Areas of Science	127
6.1	Clusters in the Family of Finite Fermion Systems	127
6.2	Clusters in Astrophysics	133
6.3	Clusters in Climate	137
6.3.1	Impact of Clusters in Climate Science	137
6.3.2	From Aerosols to Water Droplets	138
6.3.3	Formation Mechanisms of Aerosols	139
6.3.4	Clusters as Seeds for Cloud Condensation Nuclei	140
6.4	Clusters in Biological Systems	143
6.4.1	Tailoring Clusters	144
6.4.2	Clusters for Medical Imaging	146
6.4.3	Clusters for Therapies	150
6.4.4	Nanotoxicity	156
7	Conclusion	159
	Further Reading	161
	References	163
	Index	169
