

Contents

1	Introduction	1
1.1	Terminology	1
1.2	Three Levels	1
1.3	Structure of the Book	4
2	Performance Theory	7
2.1	System Performance	7
2.1.1	Hardware Parameters	8
2.1.2	CPU	12
2.1.3	Main Memory	17
2.1.4	Disks	21
2.1.5	I/O	23
2.1.6	Operating System Parameters	25
2.2	Application Performance	26
2.2.1	Application Parameters	26
2.2.2	Data Management Concepts	28
2.2.3	Application Environment	33
3	Performance Measurement	35
3.1	General	35
3.2	Measurement	35
3.2.1	Dynamic Data	35
3.2.2	Static Data	37
3.3	Preconditions	37
3.3.1	Examples from Performance Measurements	39
3.4	Data Collection Proper	39
3.4.1	Test Data	39
3.4.2	Other Important Statistics and Indicators	40
3.4.3	Monitoring	42
3.5	Special Case Cloud Applications	45
3.5.1	Introduction	45
3.5.2	Cloud Applications	45
3.5.3	Procedure	46

3.5.4	Response Time Behaviour	46
3.5.5	End-User Response Times	48
3.5.6	Test Scripts	49
3.5.7	Conducting Measurements	49
3.5.8	Analysis of Cloud Measurements	51
3.5.9	Conclusion.	51
3.5.10	Checklist	52
3.6	Automation	52
4	Analysis	55
4.1	General	55
4.2	Data Reduction.	56
4.3	Findings	57
4.4	Evaluation	62
4.4.1	Average CPU Usage	62
4.4.2	Time-Dependent CPU Usage	63
4.4.3	Relative CPU Usage	63
4.4.4	Average Disk Accesses	63
4.4.5	Time-Dependent I/O Waits	63
4.4.6	Memory Management	64
4.4.7	Average Memory Management Activities	64
4.4.8	Time-Dependent Memory Management Activities	64
4.4.9	Paging I/Os	64
4.4.10	Conclusions	65
5	Optimisation	67
5.1	System Tuning	68
5.1.1	File Distribution	68
5.1.2	File Clean-Up	69
5.1.3	File Reorganisation.	69
5.1.4	System Disk.	69
5.1.5	Paging Areas	69
5.1.6	Virtual Memory	70
5.1.7	Spool Area	70
5.1.8	System Tables	70
5.1.9	Buffers	70
5.1.10	Priorities	71
5.1.11	File Sharing and Code Sharing.	71
5.1.12	Versions	72
5.1.13	Drivers and Protocols	72
5.1.14	Registries.	72
5.2	Application Tuning.	73
5.2.1	Application Architecture	73
5.2.2	Sub-Systems	74

5.2.3	Function Calls	74
5.2.4	Program Structure.	75
5.2.5	Frequent Calls and Opens	75
5.2.6	File Sizes.	75
5.2.7	File Handling	76
5.2.8	Sorts	76
5.2.9	Copying	76
5.2.10	GUI	76
5.2.11	Production Schedule	77
5.2.12	Training	77
5.3	Investments	77
5.3.1	Utilisation of Disks.	78
5.3.2	Data Management.	78
5.3.3	Conclusions	79
6	Network Performance.	83
6.1	Introduction	83
6.2	Peculiarities	83
6.3	Evaluation	84
6.4	Tools	84
6.5	Networks.	84
6.5.1	LAN	86
6.5.2	WLAN	87
7	Process Performance	101
7.1	Starting Position	101
7.2	Identifying Critical Business Processes	101
7.2.1	Processes Relevant to Performance	101
7.3	Process Documentation	109
7.3.1	Types of Documentation	109
7.3.2	Integrity and Relevance.	110
7.3.3	Responsibilities	111
7.3.4	Versioning and Approval.	111
7.4	Process Tests for New Applications	112
7.4.1	Availability of Partner Systems	114
7.4.2	Test Scripts and Test Data.	114
7.4.3	Organisation of Tests	116
8	Best Practise Examples.	119
8.1	Hewlett&Packard: LoadRunner	119
8.1.1	Operating Load	119
8.1.2	Comprehensive Coverage of Technical Environments	120
8.1.3	Implementation	120

8.1.4	Service-Level Objectives	120
8.1.5	Monitoring	120
8.1.6	Analysis	121
8.1.7	Interface to HP Diagnostics	122
8.1.8	Scalability	122
8.2	Microsoft: SQL Server 2008	122
8.2.1	General	122
8.2.2	The Profiler	123
8.2.3	Performance Indicators	123
8.2.4	Other Monitoring and Reports	124
8.3	UNIX Systems	125
8.3.1	Overview	125
8.3.2	Average System Load	125
8.3.3	Process Overview	126
8.3.4	Other Reports	126
8.4	Windows: TuneUp	128
8.4.1	Overview of All Modules	128
8.4.2	Selected Improvement Tools	130
8.4.3	Problem Solving	132
8.4.4	System Maintenance	133
8.4.5	Other Tools	135
8.4.6	Customising Windows©	135
8.4.7	TuneUp Utilities	136
9	Limits and Overall Application Context	139
10	Checklists	143
11	Appendixes	149
11.1	Project Management	149
11.1.1	Technical and Organisational Tools	149
11.1.2	Objectives and Tasks	150
11.1.3	PMS Functions	151
11.2	Project Controlling	155
11.2.1	Peculiarities	155
11.2.2	Objects	155
11.2.3	Process Approach	156
11.2.4	Reporting	158
11.2.5	Controlling	159
