1.15	Differentiation and Integration in Tensor Field	44

<b>2 Motion and Strain (Rate) .....</b>	49
2.1 Motion of Material Point .....	49
2.2 Time-Derivatives .....	51
2.3 Material-Time Derivative of Volume Integration .....	52
2.4 Deformation Gradient and Deformation Tensors .....	53
2.5 Strain Tensors .....	58
2.6 Strain Rate and Spin Tensors .....	63
2.7 Logarithmic and Nominal Strains .....	72
2.8 Surface Element, Volume Element and Their Rates .....	74
<b>3 Conservation Laws and Stress Tensors .....</b>	77
3.1 Conservation Law of Mass .....	77
3.2 Conservation Law of Linear Momentum .....	77
3.3 Conservation Law of Angular Momentum .....	78
3.4 Stress Tensor .....	78
3.5 Equilibrium Equation .....	83
3.6 Equilibrium Equation of Moment .....	85
3.7 Virtual Work Principle .....	85
3.8 Various Simple Deformations .....	86
3.8.1 Uniaxial Loading .....	86
3.8.2 Simple Shear .....	88
3.8.3 Combination of Tension and Distortion .....	97
<b>4 Objectivity, and Objective and Corotational Rate Tensors .....</b>	101
4.1 Objectivity .....	101
4.2 Influence of Rigid-Body Rotation on Various Mechanical Quantities .....	102
4.3 Material-Time Derivative of Tensor .....	105
4.4 Convected Time-Derivative of Tensor .....	106
4.5 Various Stress Rate Tensors .....	115
4.6 Time Derivative of Scalar-Valued Tensor Function .....	117
4.7 Work Conjugacy .....	120
<b>5 Elastic Constitutive Equations .....</b>	123
5.1 Hyperelasticity .....	123
5.2 Cauchy Elasticity .....	126
5.3 Hypoelasticity .....	127
<b>6 Basic Formulations for Elastoplastic Constitutive Equations .....</b>	131
6.1 Multiplicative Decomposition of Deformation Gradient and Additive Decomposition of Strain Rate .....	131
6.2 Conventional Elastoplastic Constitutive Equations .....	139
6.3 Loading Criterion .....	144
6.4 Physical Backgrounds of Associated Flow Rule .....	147

6.4.1	Positiveness of Second-Order Plastic Work Rate: Prager's Interpretation .....	147
6.4.2	Positiveness of Work Done during Stress Cycle: Drucker's Postulate .....	147
6.4.3	Positiveness of Second-Order Plastic Relaxation Work Rate .....	150
6.4.4	Comparison of Interpretations for Associated Flow Rule .....	150
6.5	Anisotropy .....	152
6.5.1	Definition of Isotropy .....	152
6.5.2	Anisotropic Plastic Constitutive Equation .....	153
6.5.3	Kinematic Hardening Rules .....	154
6.5.4	Interpretation of Kinematic Hardening Rule: Rheological Model .....	158
6.6	Incorporation of Tangential-Inelastic Strain Rate .....	160
6.7	Limitations of Conventional Elastoplasticity .....	165
<b>7</b>	<b>Unconventional Elastoplasticity Model: Subloading Surface Model .....</b>	<b>167</b>
7.1	Mechanical Requirements .....	167
7.1.1	Continuity Condition .....	167
7.1.2	Smoothness Condition .....	169
7.2	Subloading Surface Model .....	170
7.3	Salient Features of Subloading Surface Model .....	177
7.4	On Bounding Surface and Bounding Surface Model .....	179
7.5	Incorporation of Kinematic Hardening .....	182
7.6	Incorporation of Tangential Inelastic Strain Rate .....	183
<b>8</b>	<b>Cyclic Plasticity Models: Critical Reviews and Assessments .....</b>	<b>187</b>
