1 Recent Investigations of Radiative Lifetimes and Transition Probabilities in Heavy Elements ($37 \leq Z \leq 92$) 1
Émile Biémont
1.1 Introduction 1
1.2 Experimental Techniques 3
1.2.1 Measurement of Lifetimes for Metastable States Using Heavy Ion Storage Rings 3
1.2.2 Allowed Transitions Investigated with Laser-Induced Fluorescence Spectroscopy 4
1.2.3 Study of Intermediate Charges with the Beam-Foil Spectroscopy 5
1.3 Theoretical Approaches 6
1.3.1 General Characteristics 6
1.3.2 The Relativistic Hartree-Fock Method 7
1.3.3 The Multiconfigurational Dirac-Fock Method 8
1.4 The Results 8
1.4.1 The Fifth Row of the Periodic Table 8
1.4.2 The Sixth Row of the Periodic Table 11
1.4.3 The Lanthanide Ions 15
1.4.4 The DESIRE and DREAM Databases 15
1.4.5 The Landé Factors 16
References 17

2 Atomic Structure Calculations Useful for Fusion and Astrophysics 23
Man Mohan, Jagjit Singh, Sunny Aggarwal, and Nupur Verma
2.1 Introduction 23
2.2 Correlation Effects 24
2.2.1 Type of Correlations 26
2.3 Radial Function 26
2.4 Optimization Process 27

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.5 Hamiltonian Matrix Elements . . . 28
2.6 Relativistic Atomic Structure Methods . . . 28
2.6.1 QED Corrections in Relativistic Codes . . . 32
2.7 Atomic Data Requirement in Sun and Other Astrophysical Objects . . . 32
2.7.1 Atomic Data for Fusion Plasma Diagnostics in ITER and Other Fusion Machines . . . 34
2.7.2 Atomic Data for Nano-technology . . . 35
2.8 Conclusions . . . 36
References . . . 36

3 Highly Charged Ions in Rare Earth Permanent Magnet Penning Traps . . . 39
Nicholas D. Guise, Samuel M. Brewer, and Joseph N. Tan
3.1 Background . . . 39
3.2 Experimental Apparatus . . . 41
3.2.1 Compact Penning Traps with Unitary Architecture . . . 41
3.2.2 Production and Extraction of Highly Charged Ions . . . 44
3.3 Experimental Results . . . 50
3.3.1 One-Magnet Penning Trap with Position-Sensitive MCP Detector . . . 50
3.3.2 Two-Magnet Penning Trap with Time-of-Flight (TOF) MCP Detector . . . 51
3.4 Summary and Outlook . . . 53
References . . . 54

4 Dominance of Higher-Order Contributions to Electronic Recombination . . . 57
P.H. Mokler, C. Beilmann, Z. Harman, C.H. Keitel, S. Bernitt, J. Ullrich, and J.R. Crespo López-Urrutia
4.1 Motivation and Introduction . . . 57
4.2 Experimental Technique and Overview Spectrum . . . 59
4.3 Results and Discussion . . . 61
4.4 Summary and Outlook . . . 65
References . . . 66

5 High Accuracy Non-LTE Modeling of X-Ray Radiation in Dense Matter . . . 67
Arati Dasgupta, Robert W. Clark, John L. Giuliani, Ward J. Thornhill, John P. Apruzese, Brent Jones, and Dave J. Ampleford
5.1 Introduction . . . 67
5.2 Theoretical Model . . . 71
5.2.1 Kinetic Models . . . 72
5.3 Radiation Transport and Hydrodynamics Simulation . . . 77
5.4 Spectral Line Intensities . . . 79

5.4.1 Energetics and Spectroscopic Simulated Data for Cu 79
5.4.2 X-Ray Stainless Steel Spectra 84
5.5 Summary and Conclusions 88
References 89

6 Dielectronic Satellites and Auger Electron Heating: Irradiation of Solids by Intense XUV-Free Electron Laser Radiation 91
F. Petitdemange and F.B. Rosmej
6.1 Introduction 91
6.2 Basic Principles of Dielectronic Satellite Emission 92
6.3 Dielectronic Capture in Dense Plasmas 96
6.4 Dielectronic Satellites Coupled to Excited States 98
6.5 Spectroscopic Precision and Spin-Orbit Split Arrays 102
6.6 Excited States Coupling Following Auger Electron Heating 105
6.6.1 Auger Electron Heating Driven by Intense XUV/X-Ray Free Electron Laser Radiation 105
6.6.2 Dielectronic Satellite Intensity Coupled to Ground and Excited States 106
6.7 Dielectronic Satellites Coupled to L-Shell Excited States 107
6.8 Collisional Redistribution Between Autoionizing States That Are Coupled to M-Shell Excited States 110
6.9 Conclusion 112
References 113

7 The Iron Project: Photoionization and Photoexcitation of Fe XVII in Solar Opacity 115
Sultana N. Nahar
7.1 Introduction 115
7.1.1 The Opacity Project and the Iron Project 116
7.2 High Temperature Plasmas in Solar Corona and Abundances . . . 117
7.3 Photoexcitation, Photoionization and Opacity 119
7.4 Theoretical Approach: Breit-Pauli R-Matrix Method 121
7.5 Results and Discussions 123
7.5.1 Energy Levels and Oscillator Strengths 123
7.5.2 High Energy Photoionization 125
7.5.3 Monochromatic Opacities 128
7.6 Conclusion 131
References 131

8 Hybrid Theory of Electron-Hydrogenic Systems Elastic Scattering 133
A.K. Bhatia
8.1 Introduction 133
8.2 Optical Potential with Polarization 136
8.3 Electron-He^+ Scattering 142
8.4 Electron-Li^{++} Scattering 143
8.5 Resonances 144

8.6 Conclusions . . . 146
References . . . 147

9 Relativistic Electron-Atom Collisions: Recent Progress and Applications . . . 149
Rajesh Srivastava and Lalita Sharma
9.1 Introduction . . . 149
9.2 Relativistic Distorted Wave Theory . . . 152
9.2.1 Scattering Amplitude . . . 152
9.2.2 Interaction Potential . . . 153
9.2.3 Bound State Wavefunction . . . 153
9.2.4 Distortion Potential . . . 154
9.2.5 Continuum Distorted Wavefunction . . . 154
9.3 Electron Excitation of Neutral Atoms . . . 156
9.4 Electron Excitation of Ions . . . 161
9.5 Application of RDW Cross Sections to CR Plasma Model . . . 162
9.6 Conclusions . . . 164
References . . . 164

10 Formation of a Narrow Group of Intense Lines in the Emission and Photoexcitation Spectra . . . 167
R. Karazija, S. Kučas, V. Jonauskas, and A. Momkauskaitė
10.1 Introduction . . . 167
10.2 Formation of a Narrow Group of Intense Lines by the Coulomb Interaction in the Single-Configuration Approximation . . . 169
10.3 Formation of a Narrow Group of Intense Lines by the Configuration Interaction . . . 174
10.3.1 Overlap of the Energy Level Spectra of the $nl^{4l+1}n(l+1)^{N+1}$ and $nl^{4l+2}n(l+1)^{N-1}n(l+2)$ Configurations. Validity of the Two-Configuration Model . . . 176
10.3.2 Formation of NGIL in the Spectra with the Intensities of Lines Proportional to the Line Strength . . . 178
10.3.3 SEOS CI Influence on the Spectra, Corresponding to the Excitation from the Ground Level of Ion . . . 181
10.4 Conclusions . . . 185
References . . . 187
