1	Introduction to Magnetism	1
	W. Weber	
1.1	Introduction	1
1.1.1	Definition of the Magnetic Moment	1
1.1.2	Energy of the Moment in an External Magnetic Field	2
1.1.3	Further Definitions	3
1.2	Magnetism of Free Atoms and Electrons	4
1.2.1	Diamagnetism of Free Atoms	4
1.2.2	Paramagnetism of Free Atoms	5
1.2.3	Pauli Paramagnetism of Free Electrons (in Metals)	9
1.3	Ferromagnetism	10
1.3.1	Molecular Field	11
1.3.2	Exchange Interaction as Origin of the Molecular Field	12
1.3.3	Mean Field Approximation (MFA)	14
1.3.4	Spin Waves	18
1.3.5	Itinerant Ferromagnetism	21
1.4	Magnetization Curves $M(H)$	22
1.4.1	Magnetostatic Energy or Shape Anisotropy	23
1.4.2	Magneto-Crystalline Anisotropy	24
1.4.3	Magnetization Curves in the "Uniform Rotation" Model	26
1.4.4	Domains and Domain Walls	28
1.5	Thin Film Magnetism	35
1.5.1	Surface Anisotropy	35
1.5.2	Indirect Exchange Coupling in Multilayers	36
1.5.3	Giant Magnetoresistance	39
	References	40

2	Spintronics: Conceptual Building Blocks	43

3	Interaction of Polarized Light with Matter	77
	Y. Joly	
3.1	Introduction	77
3.2	Experimental Observations of X-Ray Interaction with Matter	78
3.2.1	Absorption	78
3.2.2	Dependence on Energy	78
3.2.3	Dependence on the Atomic Environment	80
3.2.4	Dependence on the Light Polarization	80
3.2.5	Diffraction Around Edges	81
3.3	The Light	83
3.3.1	Definitions and Notations	83
3.3.2	Stokes Parameters	84
3.3.3	Quantization of the Electromagnetic Field	85
3.4	Interaction of Light with an Electron in an Atom	85
3.4.1	Linear and Nonlinear Interactions	86
3.4.2	Interaction Hamiltonian	86
3.4.3	Absorption and Emission	88
3.4.4	Scattering	88
3.4.5	Transition Matrix	93
3.4.6	Selection Rules	94

3.5	Dielectric Function or Macroscopic Point of View.....	98
3.5.1	Complex Permittivity	99
3.5.2	Complex Refractive Index	101
3.6	X-Ray Spectroscopies	102
3.6.1	Characteristic Times	103
3.6.2	The Different Spectroscopies.....	104
3.6.3	Fluorescence and Auger Spectroscopies.....	106
3.6.4	XANES and RXS Formula	107
3.6.5	Multipole Analysis.....	112
3.6.6	X-Ray Magnetic Circular Dichroism	118
3.7	Monoelectronic Simulations.....	120
3.7.1	The Potential	120
3.7.2	The Multiple Scattering Theory	121
3.7.3	Available Codes	123
3.8	Conclusion	123
	References.....	124
4	Synchrotron Radiation Sources and Optical Devices.....	127
