Part I IEEE 802.15.4 and ZigBee Protocols and Implementations

1	Snapshot of the IEEE 802.15.4 and ZigBee Protocols	3
1.1	General Aspects	3
1.2	IEEE 802.15.4	7
1.2.1	Physical Layer	8
1.2.2	Medium Access Control Sub-Layer	9
1.3	ZigBee	19
1.3.1	Short Address Assignment	20
1.3.2	ZigBee Routing	21
1.3.3	Routing Schemes	21
1.4	Problems, Gaps and Open Issues	23
	References	24
2	Protocol Implementations	27
2.1	IEEE 802.15.4 MAC Implementation in TinyOS 2	27
2.1.1	TinyOS 2	28
2.1.2	MAC Decomposition	29
2.1.3	Radio Arbitration in Beacon-Enabled PANs	31
2.1.4	Interface Definitions	35
2.2	ZigBee Cluster-Tree Network Layer Implementation in TinyOS	38
2.2.1	Software Architecture	38
2.2.2	Joining a ZigBee Network	38
2.2.3	Tree Routing	41
	References	42
3	Models and Tools	45
3.1	Worst-Case Analysis and Dimensioning	45
3.1.1	Guaranteed Bandwidth of a GTS	46
3.1.2	Characterization of the Service Curve	47
3.1.3	IEEE 802.15.4/ZigBee Cluster-Tree WSN Setup	49

3.2	Simulation Models	50
3.2.1	OPNET	51
3.2.2	CASTALIA	55
3.3	Network/Protocol Analyzer (Z-Monitor)	60
	References	62
4	Performance Analysis and Network Dimensioning	65
4.1	Performance Analysis of the IEEE 802.15.4 GTS Mechanism	65
4.1.1	Simulation Setup	65
4.1.2	Simulation Versus Analytical Models	66
4.1.3	Performance Analysis	66
4.2	Performance Analysis of the IEEE 802.15.4 CSMA/CA Mechanism	71
4.2.1	Experimental and Simulation Testbeds	72
4.2.2	Performance Analysis	74
4.3	Performance Analysis and Worst-Case Dimensioning of ZigBee Cluster-Tree Networks	77
4.3.1	Network Setup	77
4.3.2	Network Planning	78
	References	82
 Part II Quality of Service Amendments		
5	Amendments to the IEEE 802.15.4 Protocol	85
5.1	Implicit GTS Allocation Mechanism	85
5.1.1	i-GAME Implementation Guidelines	87
5.1.2	Experimental Evaluation	88
5.2	Hidden Node Avoidance Mechanism	90
5.2.1	H-NAME in IEEE 802.15.4/ZigBee	92
5.2.2	Experimental Evaluation	93
5.3	Traffic Differentiation Mechanism for CSMA/CA	96
5.3.1	Traffic Differentiation Strategy	96
5.3.2	Implementation Approach	98
5.3.3	Experimental Evaluation	98
5.4	Security Services	102
5.4.1	Security Modes	103
5.4.2	Security-Related PAN Information	105
5.4.3	Key Identifier Modes	106
5.4.4	Security Functional Description	106
5.4.5	Impact of Security on Performance	110
	References	111

6	Amendments to the ZigBee Protocol	113
6.1	Time Division Cluster Scheduling for ZigBee Cluster-Tree Networks	113
6.1.1	Motivation	113
6.1.2	Problem Statement	114
6.1.3	Implementation Details of the TDCS Approach	115
6.2	Geographical and Multicast Routing for ZigBee Cluster-Tree Networks	117
6.2.1	Z-Cast: ZigBee Multicast Routing	118
6.2.2	Geographical Routing	122
6.3	Security Services	125
6.3.1	ZigBee NWK Frames Protection	127
6.3.2	ZigBee APS Frames Protection	127
6.3.3	ZigBee Security Modes	128
6.3.4	ZigBee Application Profiles	128
6.3.5	Deficiencies in ZigBee Security	131
6.3.6	Key Revocation and Renewal	131
6.3.7	Certificates Management	132
	References	133

Part III System Architectures and Applications

7	Structural Health Monitoring	137
7.1	System Scalability	137
7.2	Network Model	138
7.3	Synchronization Mechanism	139
7.4	Theoretical Analysis of the Scalability	140
7.5	Experimental Analysis of the Scalability	141
	References	142
8	Environmental Monitoring	143
8.1	Design Guidelines	143
8.2	EMMON System Architecture	144
8.3	Communication Protocol Architecture	146
8.3.1	Design Choices	146
8.3.2	Multi-Tiered Architecture	147
8.4	EMW: EMMON Middleware	148
8.4.1	High-Level API	148
8.4.2	EMW Architecture	148
8.4.3	Spatial Aggregation	150
8.5	Command and Control	151
8.6	System Planning, Simulation, Analysis Toolset	152
8.7	EMMON Demonstrator	154
	References	157

9 Energy-Efficiency in Data Centers. 159

9.1 Architecture Overview 160

9.1.1 Environment and Power Data Collection 160

9.2 Data Center Radio Environment. 162

9.2.1 Background Noise 162

9.2.2 WSN Connectivity 162

9.3 Remarks 164

References 164

10 Conclusions 167

About the Authors. 169
