

# Contents

<b>I</b>	<b>Balance Laws</b> .....	1
1.1	Formulation of the Balance Law .....	2
1.2	Reduction to Field Equations .....	3
1.3	Change of Coordinates and a Trace Theorem .....	7
1.4	Systems of Balance Laws .....	12
1.5	Companion Balance Laws .....	13
1.6	Weak and Shock Fronts .....	15
1.7	Survey of the Theory of <i>BV</i> Functions .....	17
1.8	<i>BV</i> Solutions of Systems of Balance Laws .....	21
1.9	Rapid Oscillations and the Stabilizing Effect of Companion Balance Laws .....	22
1.10	Notes .....	23
<b>II</b>	<b>Introduction to Continuum Physics</b> .....	25
2.1	Bodies and Motions .....	25
2.2	Balance Laws in Continuum Physics .....	28
2.3	The Balance Laws of Continuum Thermomechanics .....	31
2.4	Material Frame Indifference .....	35
2.5	Thermoelasticity .....	36
2.6	Thermoviscoelasticity .....	44
2.7	Incompressibility .....	47
2.8	Relaxation .....	48
2.9	Notes .....	49
<b>III</b>	<b>Hyperbolic Systems of Balance Laws</b> .....	53
3.1	Hyperbolicity .....	53
3.2	Entropy-Entropy Flux Pairs .....	54
3.3	Examples of Hyperbolic Systems of Balance Laws .....	56
3.4	Notes .....	72

<b>IV</b>	<b>The Cauchy Problem</b> .....	75
4.1	The Cauchy Problem: Classical Solutions .....	75
4.2	Breakdown of Classical Solutions .....	78
4.3	The Cauchy Problem: Weak Solutions .....	81
4.4	Nonuniqueness of Weak Solutions .....	82
4.5	Entropy Admissibility Condition .....	83
4.6	The Vanishing Viscosity Approach .....	87
4.7	Initial-Boundary Value Problems .....	91
4.8	Notes .....	95
<b>V</b>	<b>Entropy and the Stability of Classical Solutions</b> .....	97
5.1	Convex Entropy and the Existence of Classical Solutions .....	98
5.2	The Role of Damping and Relaxation .....	108
5.3	Convex Entropy and the Stability of Classical Solutions .....	116
5.4	Involutions .....	119
5.5	Contingent Entropies and Polyconvexity .....	129
5.6	Initial-Boundary Value Problems .....	138
5.7	Notes .....	141
<b>VI</b>	<b>The <math>L^1</math> Theory for Scalar Conservation Laws</b> .....	145
6.1	The Cauchy Problem: Perseverance and Demise of Classical Solutions .....	146
6.2	Admissible Weak Solutions and their Stability Properties .....	148
6.3	The Method of Vanishing Viscosity .....	153
6.4	Solutions as Trajectories of a Contraction Semigroup .....	158
6.5	The Layering Method .....	164
6.6	Relaxation .....	167
6.7	A Kinetic Formulation .....	174
6.8	Fine Structure of $L^\infty$ Solutions .....	180
6.9	Initial-Boundary Value Problems .....	183
6.10	The $L^1$ Theory for Systems of Conservation Laws .....	188
6.11	Notes .....	192
<b>VII</b>	<b>Hyperbolic Systems of Balance Laws in One-Space Dimension</b> .....	195
7.1	Balance Laws in One-Space Dimension .....	195
7.2	Hyperbolicity and Strict Hyperbolicity .....	203
7.3	Riemann Invariants .....	206
7.4	Entropy-Entropy Flux Pairs .....	211
7.5	Genuine Nonlinearity and Linear Degeneracy .....	214
7.6	Simple Waves .....	216
7.7	Explosion of Weak Fronts .....	220
7.8	Existence and Breakdown of Classical Solutions .....	221
7.9	Weak Solutions .....	225
7.10	Notes .....	226

<b>VIII</b>	<b>Admissible Shocks</b> .....	231
8.1	Strong Shocks, Weak Shocks, and Shocks of Moderate Strength	231
8.2	The Hugoniot Locus .....	234
8.3	The Lax Shock Admissibility Criterion; Compressive, Overcompressive and Undercompressive Shocks .	240
8.4	The Liu Shock Admissibility Criterion .....	246
8.5	The Entropy Shock Admissibility Criterion .....	248
8.6	Viscous Shock Profiles .....	252
8.7	Nonconservative Shocks .....	264
8.8	Notes .....	265
<b>IX</b>	<b>Admissible Wave Fans and the Riemann Problem</b> .....	271
9.1	Self-Similar Solutions and the Riemann Problem .....	271
9.2	Wave Fan Admissibility Criteria .....	274
9.3	Solution of the Riemann Problem via Wave Curves .....	275
9.4	Systems with Genuinely Nonlinear or Linearly Degenerate Characteristic Families .....	278
9.5	General Strictly Hyperbolic Systems .....	283
9.6	Failure of Existence or Uniqueness; Delta Shocks and Transitional Waves .....	287
9.7	The Entropy Rate Admissibility Criterion .....	290
9.8	Viscous Wave Fans .....	299
9.9	Interaction of Wave Fans .....	309
9.10	Breakdown of Weak Solutions .....	317
9.11	Notes .....	320
<b>X</b>	<b>Generalized Characteristics</b> .....	325
10.1	<i>BV</i> Solutions .....	325
10.2	Generalized Characteristics .....	326
10.3	Extremal Backward Characteristics .....	328
10.4	Notes .....	330
<b>XI</b>	<b>Genuinely Nonlinear Scalar Conservation Laws</b> .....	331
11.1	Admissible <i>BV</i> Solutions and Generalized Characteristics ....	332
11.2	The Spreading of Rarefaction Waves .....	335
11.3	Regularity of Solutions .....	336
11.4	Divides, Invariants and the Lax Formula .....	340
11.5	Decay of Solutions Induced by Entropy Dissipation .....	344
11.6	Spreading of Characteristics and Development of <i>N</i> -Waves ....	346
11.7	Confinement of Characteristics and Formation of Saw-toothed Profiles .....	348
11.8	Comparison Theorems and $L^1$ Stability .....	350
11.9	Genuinely Nonlinear Scalar Balance Laws .....	358
11.10	Balance Laws with Linear Excitation .....	362
11.11	An Inhomogeneous Conservation Law .....	365
11.12	Notes .....	370

<b>XII</b>	<b>Genuinely Nonlinear Systems of Two Conservation Laws</b>	373
12.1	Notation and Assumptions	373
12.2	Entropy-Entropy Flux Pairs and the Hodograph Transformation	375
12.3	Local Structure of Solutions	378
12.4	Propagation of Riemann Invariants Along Extremal Backward Characteristics	381
12.5	Bounds on Solutions	398
12.6	Spreading of Rarefaction Waves	410
12.7	Regularity of Solutions	415
12.8	Initial Data in $L^1$	417
12.9	Initial Data with Compact Support	421
12.10	Periodic Solutions	427
12.11	Notes	432
<b>XIII</b>	<b>The Random Choice Method</b>	435
13.1	The Construction Scheme	435
13.2	Compactness and Consistency	438
13.3	Wave Interactions, Approximate Conservation Laws and Approximate Characteristics in Genuinely Nonlinear Systems	444
13.4	The Glimm Functional for Genuinely Nonlinear Systems	448
13.5	Bounds on the Total Variation for Genuinely Nonlinear Systems	453
13.6	Bounds on the Supremum for Genuinely Nonlinear Systems	455
13.7	General Systems	457
13.8	Wave Tracing	460
13.9	Inhomogeneous Systems of Balance Laws	463
13.10	Notes	474
<b>XIV</b>	<b>The Front Tracking Method and Standard Riemann Semigroups</b>	477
14.1	Front Tracking for Scalar Conservation Laws	478
14.2	Front Tracking for Genuinely Nonlinear Systems of Conservation Laws	480
14.3	The Global Wave Pattern	485
14.4	Approximate Solutions	486
14.5	Bounds on the Total Variation	488
14.6	Bounds on the Combined Strength of Pseudoshocks	491
14.7	Compactness and Consistency	494
14.8	Continuous Dependence on Initial Data	496
14.9	The Standard Riemann Semigroup	500
14.10	Uniqueness of Solutions	501
14.11	Continuous Glimm Functionals, Spreading of Rarefaction Waves, and Structure of Solutions	507
14.12	Stability of Strong Waves	510
14.13	Notes	512

<b>XV</b>	<b>Construction of BV Solutions by the Vanishing Viscosity Method . .</b>	<b>517</b>
15.1	The Main Result . . . . .	517
15.2	Road Map to the Proof of Theorem 15.1.1 . . . . .	519
15.3	The Effects of Diffusion . . . . .	521
15.4	Decomposition into Viscous Traveling Waves . . . . .	524
15.5	Transversal Wave Interactions . . . . .	528
15.6	Interaction of Waves of the Same Family . . . . .	532
15.7	Energy Estimates . . . . .	536
15.8	Stability Estimates . . . . .	539
15.9	Notes . . . . .	542
<b>XVI</b>	<b>Compensated Compactness . . . . .</b>	<b>545</b>
16.1	The Young Measure . . . . .	546
16.2	Compensated Compactness and the div-curl Lemma . . . . .	547
16.3	Measure-Valued Solutions for Systems of Conservation Laws and Compensated Compactness . . . . .	548
16.4	Scalar Conservation Laws . . . . .	551
16.5	A Relaxation Scheme for Scalar Conservation Laws . . . . .	553
16.6	Genuinely Nonlinear Systems of Two Conservation Laws . . . . .	556
16.7	The System of Isentropic Elasticity . . . . .	559
16.8	The System of Isentropic Gas Dynamics . . . . .	564
16.9	Notes . . . . .	567
<b>XVII</b>	<b>Conservation Laws in Two Space Dimensions . . . . .</b>	<b>573</b>
17.1	Self-Similar Solutions for Multidimensional Scalar Conservation Laws . . . . .	573
17.2	Steady Planar Isentropic Gas Flow . . . . .	576
17.3	Self-Similar Planar Irrotational Isentropic Gas Flow . . . . .	580
17.4	Supersonic Isentropic Gas Flow Past a Ramp of Gentle Slope . .	583
17.5	Regular Shock Reflection on a Wall . . . . .	588
17.6	Shock Collision with a Steep Ramp . . . . .	591
17.7	Notes . . . . .	594
	<b>Bibliography . . . . .</b>	<b>597</b>
	<b>Author Index . . . . .</b>	<b>693</b>
	<b>Subject Index . . . . .</b>	<b>703</b>
