

Table of Contents

1	Introduction	1
1.1	Phenomenological Models of Attached Viscous Flow	2
1.2	Three Kinds of Interaction and the Locality Principle	4
1.3	Short Survey of the Development of the Field	7
1.4	Scope and Content of the Book	15
	References	18
2	Properties of Three-Dimensional Attached Viscous Flow	23
2.1	Characterization of the Flow	23
2.2	Coordinate Systems and Velocity Profiles	29
2.2.1	Cartesian Coordinates	30
2.2.2	External Inviscid Streamline-Oriented Coordinates	30
2.2.3	Surface-Oriented Non-Orthogonal Curvilinear Coordinates	32
2.3	Influencing Attached Viscous Flow and Flow Three-Dimensionality	35
2.3.1	Surface Suction	36
2.3.2	Surface-Normal Injection (Blowing)	38
2.3.3	Thermal Surface Effects	40
2.4	Problems	47
	References	48
3	Equations of Motion	51
3.1	Material and Transport Properties of Air	51
3.1.1	Equation of State and Specific Heat at Constant Pressure	51
3.1.2	Transport Properties	52
3.2	Equations of Motion for Steady Laminar Flow in Cartesian Coordinates	57
3.2.1	Transport of Mass: The Continuity Equation	57
3.2.2	Transport of Momentum: The Navier-Stokes Equations	57
3.2.3	Transport of Energy: The Energy Equation	59
3.3	Initial and Boundary Conditions	59
3.4	Similarity Parameters, Boundary-Layer Thicknesses	61

3.5	Equations of Motion for Steady Turbulent Flow	67
3.6	Problems	72
	References	73
4	Boundary-Layer Equations for Three-Dimensional Flow . .	75
4.1	Preliminary Notes	75
4.1.1	Coordinate Convention	75
4.1.2	The Boundary-Layer Criteria	75
4.2	First-Order Boundary-Layer Equations for Steady Laminar Flow	76
4.3	Boundary-Layer Equations for Steady Turbulent Flow	80
4.3.1	Averaged Navier-Stokes Equations	80
4.3.2	Scales	81
4.3.3	Structure of the Flow	82
4.3.4	Boundary-Layer Equations	86
4.4	Characteristic Properties of Attached Viscous Flow	87
4.5	Wall Compatibility Conditions	91
4.6	Problems	95
	References	97
5	Boundary-Layer Integral Parameters	99
5.1	General Considerations	99
5.2	Mass-Flow Displacement Thickness and Equivalent Inviscid Source Distribution	100
5.3	Momentum-Flow Displacement Thickness	101
5.4	Energy-Flow Displacement Thickness	102
5.5	Problems	102
	References	104
6	Viscous Flow and Inviscid Flow—Connections and Interactions	107
6.1	Introductory Remarks The Displacement Effect	107
6.2	Interaction Theory	110
6.2.1	About the Beginnings	110
6.2.2	Weak Interaction	111
6.2.3	Strong Interaction	116
6.3	Viscous-Inviscid Interaction Methods	117
6.4	Examples	120
6.4.1	Second-Order Boundary-Layer Effects	120
6.4.2	Viscous-Inviscid Interaction Effects	123
6.5	Problems	125
	References	128

7	Topology of Skin-Friction Fields	131
7.1	Introduction	131
7.1.1	General Remarks	131
7.1.2	The Concept of Limiting Streamlines	132
7.1.3	General Issues of Three-Dimensional Attachment	133
7.1.4	General Issues of Three-Dimensional Separation	134
7.1.5	Detachment Points and Lines	136
7.2	Singular Points	138
7.2.1	Introduction	138
7.2.2	Flow-Field Continuation around a Surface Point	139
7.2.3	Singular Points on Body Surfaces	141
7.3	Topological Rules	144
7.4	Singular Lines	147
7.4.1	Introduction	147
7.4.2	Attachment Lines	150
7.4.3	Separation Lines	165
7.5	Attachment and Separation of Three-Dimensional Viscous Flow - More Results and Indicators	172
7.6	Problems	175
	References	175
8	Quasi-One-Dimensional and Quasi-Two-Dimensional Flows	179
8.1	Stagnation Point Flow	179
8.2	Flow in Symmetry Planes	183
8.3	The Infinite Swept Wing	187
8.4	The Locally Infinite Swept Wing	191
8.5	Initial Data for Infinite-Swept-Wing Solutions	193
8.6	Two-Dimensional and Axisymmetric Flow	195
8.7	The Mangler Effect	195
8.8	Problems	196
	References	198
9	Laminar-Turbulent Transition and Turbulence	201
9.1	Laminar-Turbulent Transition - An Introduction	201
9.2	Instability/Transition Phenomena and Criteria	203
9.2.1	Some Basic Observations	204
9.2.2	Outline of Stability Theory	207
9.2.3	Inviscid Stability Theory and the Point-of-Inflexion Criterion	210
9.2.4	The Thermal State of the Surface, Compressible Flow	212
9.3	Real Flight-Vehicle Effects	213
9.3.1	Attachment-Line Instability	214
9.3.2	Leading-Edge Contamination	215

9.3.3	Cross-Flow Instability	217
9.3.4	Görtler Instability	219
9.3.5	Relaminarization	220
9.4	Receptivity Issues	221
9.4.1	Surface Irregularities and Transition	222
9.4.2	Free-Stream Fluctuations and Transition	223
9.5	Prediction of Stability/Instability and Transition	225
9.5.1	Stability/Instability Theory and Methods	226
9.5.2	Transition Models and Criteria	227
9.6	Turbulence Phenomena and Models	231
9.7	Boundary-Layer Control	232
9.8	Problems	233
	References	237
10	Illustrating Examples	245
10.1	The Locality Principle: Flow Past a Helicopter Fuselage and Past Finite-Span Wings	246
10.2	Flow Patterns Upstream of and at Trailing Edges of Lifting Wings with Large Aspect Ratio	251
10.3	Aspects of Skin-Friction Line Topology: Flow Past an Airplane Configuration	259
10.4	Extrema of the Thermal State of the Surface: Flow Past a Blunt Delta Wing	273
10.5	The Location of Laminar-Turbulent Transition: Flow Past an Ellipsoid at Angle of Attack	278
	References	284
11	Solutions of the Problems	287
Appendix A:	Equations of Motion in General Formulations ..	319
A.1	Navier-Stokes/RANS Equations in General Coordinates	319
A.2	Boundary-Layer Equations in General Coordinates	321
A.2.1	First-Order Equations in Non-orthogonal Curvilinear Coordinates	322
A.2.2	Small Cross-Flow Equations	325
A.2.3	The Geodesic as Prerequisite for the Plane-of- Symmetry Flow	328
A.2.4	Equations in Contravariant Formulation	329
A.2.5	Higher-Order Equations—The SOBOL Method	332
A.3	A Note on Computation Methods	332
A.3.1	Navier-Stokes/RANS Methods	332
A.3.2	Boundary-Layer Methods	333
A.3.3	Similarity Solutions	334
	References	334

Appendix B: Approximate Relations for Boundary-Layer

Properties	337
B.1 Introduction	337
B.2 The Reference-Temperature Concept	337
B.3 Generalized Reference-Temperature Relations	339
B.3.1 Flat Plate	339
B.3.2 Stagnation Point	343
B.3.3 Attachment-Line at a Swept Cylinder	344
B.4 Virtual Origin of Boundary Layers at Junctions	346
References	349

Appendix C: Boundary-Layer Coordinates: Metric

Properties, Transformations, Examples	351
C.1 Metric Properties of Surface Coordinates	351
C.2 Transformations	354
C.3 Example 1: Fuselage Cross-Section Coordinate System	356
C.4 Example 2: Wing Percent-Line Coordinate System	360
References	365

Appendix D: Constants, Atmosphere Data, Units, and

Conversions	367
D.1 Constants and Air Properties	367
D.2 Atmosphere Data	368
D.3 Units and Conversions	368
References	370

Appendix E: Symbols, Abbreviations, and Acronyms 371

E.1 Latin Letters	371
E.2 Greek Letters	373
E.3 Indices	374
E.3.1 Upper Indices	374
E.3.2 Lower Indices	374
E.4 Other Symbols	375
E.5 Abbreviations, Acronyms	375
