Preface — vii

1 The Poisson integral and Hardy spaces — 1

- 1.1 The Poisson integral — 5
 - 1.1.1 Borel measures and the space h^1 — 6
 - 1.2 Spaces h^p and $L^p(\mathbb{T})$ ($p > 1$) — 10
 - 1.3 Space h^p ($p < 1$) — 12
 - 1.4 Harmonic conjugates — 18
 - 1.4.1 Privalov–Plessner’s theorem and the Hilbert operator — 19
 - 1.5 Hardy spaces: basic properties — 22
 - 1.5.1 Radial limits and mean convergence — 24
 - 1.5.2 Space H^1 — 27
 - 1.6 Riesz projection theorem — 29
 - 1.6.1 Aleksandrov’s theorem — 33
- Further notes and results — 35

2 Subharmonic functions and Hardy spaces — 40

- 2.1 Basic properties of subharmonic functions — 40
 - 2.1.1 Maximum principle — 42
 - 2.2 Properties of the mean values — 42
 - 2.3 Riesz measure — 45
 - 2.3.1 Riesz’ representation formula — 47
 - 2.4 Factorization theorems — 49
 - 2.4.1 Inner–outer factorization — 50
 - 2.5 Some sharp inequalities — 52
 - 2.6 Hardy–Stein identities — 58
 - 2.6.1 Lacunary series — 60
 - 2.7 Subordination principle — 61
 - 2.7.1 Composition with inner functions — 64
 - 2.7.2 Approximation with inner functions — 68
- Further notes and results — 69

3 Subharmonic behavior and mixed norm spaces — 74

- 3.1 Quasi-nearly subharmonic functions — 74
- 3.2 Regularly oscillating functions — 75
- 3.3 Mixed norm spaces: definition and basic properties — 83
- 3.4 Embedding theorems — 92
- 3.5 Fractional integration — 95

3.6	Weighted mixed norm spaces —	99
3.6.1	Lacunary series in mixed norm spaces —	102
3.6.2	Bergman spaces with rapidly decreasing weights —	102
3.6.3	Mixed norm spaces with subnormal weights —	105
3.7	L^q -integrability of lacunary power series —	109
3.7.1	Lacunary series in $C[0, 1]$ —	112
	Further notes and results —	114
4	Taylor coefficients with applications —	118
4.1	Using interpolation of operators on H^p —	118
4.1.1	An embedding theorem —	121
4.1.2	The case of monotone coefficients —	126
4.2	Strong convergence in H^1 —	129
4.2.1	Generalization to (C, α) -convergence —	131
4.3	A (C, α) -maximal theorem —	132
	Further notes and results —	135
5	Besov spaces —	138
5.1	Decomposition of Besov spaces: case $1 < p < \infty$ —	138
5.2	Maximal function —	140
5.3	Decomposition of Besov spaces: case $0 < p \leq \infty$ —	143
5.3.1	Radial limits of Hardy–Bloch functions —	145
5.4	Duality in the case $0 < p \leq \infty$ —	149
5.5	Embeddings between Hardy and Besov spaces —	155
5.6	Best approximation by polynomials —	160
5.7	Normal Besov spaces —	162
5.8	Inner functions in Besov and Hardy–Sobolev spaces —	164
5.8.1	Approximation of a singular inner function —	164
5.8.2	Hardy–Sobolev space $S^p_{1/p}$ —	170
5.8.3	f-property and K-property —	171
	Further notes and results —	172
6	The dual of H^1 and some related spaces —	175
6.1	Norms on BMOA —	175
6.2	Garsia’s and Fefferman’s theorems —	179
6.2.1	Fefferman’s duality theorem —	183
6.3	Vanishing mean oscillation —	183
6.4	BMOA and $\mathfrak{B}^p_{1/p}$ —	185
6.4.1	Tauberian nature of $\mathfrak{B}^p_{1/p}$ —	188
6.5	Coefficients of BMOA functions —	189
6.6	Bloch space —	189

6.7	Mean growth of H^p -Bloch functions —	192
6.8	Composition operators on $\mathfrak{B}$ and BMOA —	194
6.8.1	Weighted Bloch spaces —	197
6.9	Proof of the bi-Bloch lemma —	202
	Further notes and results —	206

7	Littlewood–Paley theory —	211
7.1	Vector maximal theorems and Calderon's area theorem —	211
7.2	Littlewood–Paley g -theorem —	213
7.3	Applications of the (C, m) -maximal theorem —	217
7.4	Generalization of the g -theorem —	222
7.5	Proof of Calderón's theorem —	224
7.6	Littlewood–Paley inequalities —	229
7.7	Hyperbolic Hardy classes —	235
	Further notes and results —	238

8	Lipschitz spaces of first order —	241
8.1	Definitions and basic properties —	241
8.1.1	Lipschitz spaces of analytic functions —	246
8.1.2	Mean Lipschitz spaces —	247
8.2	Lipschitz condition for the modulus —	249
8.3	Composition operators —	251
8.4	Composition operators into $H\Lambda_\omega^p$ —	254
8.5	Inner functions —	260
	Further notes and results —	261

9	Lipschitz spaces of higher order —	264
9.1	Moduli of smoothness and related spaces —	264
9.2	Lipschitz spaces and spaces of harmonic functions —	267
9.3	Conjugate functions —	275
9.4	Integrated mean Lipschitz spaces —	278
9.4.1	Generalized Lipschitz spaces —	280
9.5	Invariant Besov spaces —	284
9.6	BMO-type characterizations of Lipschitz spaces —	286
9.6.1	Division and multiplication by inner functions —	290
	Further notes and results —	291

10	One-to-one mappings —	294
10.1	Integral means of univalent functions —	294
10.1.1	Distortion theorems —	295
10.2	Membership of univalent functions in some function classes —	298

10.3	Quasiconformal harmonic mappings —	304
10.3.1	Boundary behavior of QCH homeomorphisms of the disk —	304
10.4	H^p -classes of quasiconformal mappings —	312
	Further notes and results —	315

11 Coefficients multipliers — 318

11.1	Multipliers on abstract spaces —	318
11.1.1	Compact multipliers —	323
11.2	Multipliers for Hardy and Bergman spaces —	324
11.2.1	Multipliers from H^1 to BMOA —	327
11.3	Solid spaces —	329
11.3.1	Solid hull of Hardy spaces ($0 < p < 1$) —	331
11.4	Multipliers between Besov spaces —	332
11.4.1	Monotone multipliers —	335
11.5	Multipliers of spaces with subnormal weights —	337
11.6	Some applications to composition operators —	348
	Further notes and results —	349

12 Toward a theory of vector-valued spaces — 352

12.1	Some properties of admissible spaces —	352
12.2	Subharmonic behavior of $\ F(z)\ _X$ —	359
12.2.1	Banach envelope of $H^p(X)$, $0 < p < 1$ —	362
12.3	Linear operators on Hardy and Bergman spaces —	364
12.4	Proof of the Coifman–Rochberg theorem —	369
	Further notes and results —	374

A Quasi-Banach spaces — 375

A.1	Quasi-Banach spaces —	375
A.2	q -Banach envelopes —	376
A.3	Closed graph theorem —	379
A.4	F -spaces —	382
A.4.1	Nevanlinna class —	382
A.5	Spaces ℓ^p —	383
A.6	Lacunary series in quasi-Banach spaces —	384
A.6.1	L^p -integrability of lacunary series on $(0, 1)$ —	385
	Further notes and results —	395

B Interpolation and maximal functions — 397

B.1	Riesz–Thorin theorem —	397
B.2	Weak L^p -spaces and Marcinkiewicz’s theorem —	399
B.3	Classical maximal functions —	403
B.4	Rademacher functions and Khintchin’s inequality —	409

B.5	Nikishin's theorem —	410
B.6	Nikishin–Stein's theorem —	412
B.7	Banach's principle and the theorem on a.e. convergence —	415
B.8	Vector-valued maximal theorem —	417
Further notes and results —		418
