

# Contents

<b>1</b>	<b>Introduction</b>	<b>15</b>
1.1	The Weierstraß and Kronecker canonical form . . . . .	16
1.2	Controllability . . . . .	18
1.3	Zero dynamics . . . . .	19
1.4	High-gain and funnel control . . . . .	20
1.5	Electrical circuits . . . . .	21
1.6	Previously published results and joint work . . . . .	22
<b>2</b>	<b>Decomposition of matrix pencils</b>	<b>25</b>
2.1	Definitions . . . . .	27
2.2	Quasi-Weierstraß form . . . . .	31
2.2.1	Wong sequences and QWF . . . . .	31
2.2.2	Eigenvector chains and WCF . . . . .	40
2.3	Quasi-Kronecker form . . . . .	47
2.3.1	Main results . . . . .	48
2.3.2	Preliminaries and interim QKF . . . . .	51
2.3.3	Proofs of the main results . . . . .	70
2.3.4	KCF, elementary divisors and minimal indices . . . . .	73
2.4	Solution theory . . . . .	81
2.4.1	Solutions in terms of QKF . . . . .	81
2.4.2	Solutions in terms of KCF . . . . .	89
2.5	Notes and References . . . . .	93
<b>3</b>	<b>Controllability</b>	<b>95</b>
3.1	Controllability concepts . . . . .	97
3.2	Solutions, relations and decompositions . . . . .	106
3.2.1	System and feedback equivalence . . . . .	107
3.2.2	A decomposition under system equivalence . . . . .	111
3.2.3	A decomposition under feedback equivalence . . . . .	112

3.3	Criteria of Hautus type . . . . .	122
3.4	Feedback, stability and autonomous systems . . . . .	127
3.4.1	Stabilizability, autonomy and stability . . . . .	128
3.4.2	Stabilization by feedback . . . . .	132
3.4.3	Control in the behavioral sense . . . . .	136
3.5	Invariant subspaces . . . . .	140
3.6	Kalman decomposition . . . . .	145
3.7	Notes and References . . . . .	151
<b>4</b>	<b>Zero dynamics</b>	<b>159</b>
4.1	Autonomous zero dynamics . . . . .	161
4.2	System inversion . . . . .	177
4.3	Asymptotically stable zero dynamics . . . . .	185
4.3.1	Transmission zeros . . . . .	186
4.3.2	Detectability . . . . .	189
4.3.3	Characterization of stable zero dynamics . . . . .	190
4.4	Stabilization . . . . .	197
4.5	Notes and References . . . . .	208
<b>5</b>	<b>High-gain and funnel control</b>	<b>211</b>
5.1	High-gain control . . . . .	212
5.2	Funnel control . . . . .	219
5.2.1	Main result . . . . .	219
5.2.2	Simulations . . . . .	234
5.3	Regular systems and relative degree . . . . .	239
5.3.1	Vector relative degree . . . . .	242
5.3.2	Strict relative degree . . . . .	245
5.3.3	Simulations . . . . .	260
5.4	Notes and References . . . . .	262
<b>6</b>	<b>Electrical circuits</b>	<b>265</b>
6.1	Positive real rational functions . . . . .	266
6.2	Graph theoretical preliminaries . . . . .	269
6.3	Circuit equations . . . . .	272
6.4	Zero dynamics and invariant zeros . . . . .	278
6.5	High-gain stabilization . . . . .	281
6.6	Funnel control . . . . .	283
6.7	Simulation . . . . .	295
6.8	Notes and References . . . . .	298
