1	Introduction	1
2	Population balance equations for nanoparticulate systems	
	<i>A thematic overview</i>	3
2.1	Particle formation phenomena	5
2.2	Survey of synthesis processes	6
2.3	Population balance models	9
3	Precipitation reaction of barium sulfate	
	<i>A flatness based parameter estimation technique</i>	15
3.1	Batch crystallization process	15
3.1.1	Experimental setup	16
3.1.2	Modeling approach	17
3.1.3	Prior results	19
3.2	Parameter identification	22
3.2.1	Model reduction using the method of moments	23
3.2.2	Notion of orbital flatness	23
3.2.3	Estimation of the interfacial energy	25
3.3	Concluding remarks and restrictions	28
4	Synthesis of silicon nanoparticles	
	<i>Matching experimental data</i>	31
4.1	Pyrolysis of silane in a hot wall reactor	32
4.1.1	Experimental setup	33
4.1.2	Modeling approach	34
4.1.3	Prior results	38
4.2	Numerical challenges	39
4.2.1	Scales and stiffness	44
4.2.2	Preserving peaks - the dynamic memory cell approach	48
4.3	Conclusion	60
5	Process control strategies for the pyrolysis of monosilane	
	<i>Accomplishing narrow size distributions</i>	63
5.1	Derivative free optimization framework	65
5.2	Structural model uncertainties	67
5.3	Optimal process control strategies	72
5.4	Conclusion	76

6	Adjoint approach to process control	
	<i>Existence and regularity properties</i>	81
6.1	Nonlocality of the particle growth mechanism	81
6.2	Analysis of a nonlinear transport equation with nonlocal velocity	84
6.2.1	Adjoint based optimality conditions	86
6.2.2	Properties of the forward problem	91
6.2.3	Properties of the adjoint problem	101
6.3	Adjoint based optimization - the complex case	111
6.4	Conclusion	116
7	Flow control for the gas phase synthesis of titanium dioxide	
	<i>Structure exploiting monotone algorithm</i>	119
7.1	Experimental setup and model reduction	120
7.2	Theory of monotone algorithms	122
7.3	Approximate step-size control	127
7.4	Conclusion	131
8	Population balance model with agglomeration	
	<i>Mathematical analysis of a partial integro-differential equation</i>	133
8.1	A priori estimates	134
8.2	Existence result for the integro-differential equation	139
8.2.1	Analysis of an approximate problem	139
8.2.2	Existence of weak solutions	143
8.3	Conclusion	144
9	Ripening of zinc oxide quantum dots	
	<i>Establishing a structure-property relation</i>	147
9.1	Fully implicit method for Ostwald ripening	149
9.1.1	Modeling approach	149
9.1.2	Prior results	152
9.1.3	Numerical realization	156
9.2	Results and discussion	169
9.3	Reconstruction algorithm for UV-Vis spectra	172
9.4	Model-based design of customized optical properties	182
9.5	Conclusion	191
10	Conclusion and outlook	195
