1	Introduction	1
1.1	Why Do We Want Machines to Learn	1
1.2	Pattern Classification	5
1.2.1	Pattern Recognition Stages	5
1.2.2	Classification	7
1.2.3	Canonical Model of Classifier	10
1.2.4	Learning Information	11
1.2.5	Uncertainty Representation	14
1.3	Supervised Learning	20
1.3.1	Learning Task	20
1.3.2	Modes	21
1.3.3	Overfitting	23
1.3.4	Bias and Variance	25
1.4	Chosen Classifiers	27
1.4.1	Bayesian Classifiers	27
1.4.2	Minimal Distance Classifiers	31
1.4.3	Rule-Based Classifiers	33
1.4.4	Neural Networks	40
1.4.5	Support Vector Machines	44
1.5	Methods of Classifier Evaluation	45
1.5.1	Initial Remarks	45
1.5.2	Preparing Datasets	47
1.5.3	Evaluation of Binary Classifiers	48
1.5.4	ROC Curve	50
1.5.5	Assessing Classifier Error	51
1.5.6	Comparing Classifiers	52
1.6	Hybrid Classifiers	55
2	Data and Knowledge Hybridization	59
2.1	Motivation	59
2.2	Data and Knowledge Quality	60

2.3	Consistency	62
2.3.1	Knowledge Consistency	62
2.3.2	Data Consistency	64
2.3.3	Data and Knowledge Consistency	64
2.4	Unification	64
2.4.1	Unification a Learning Set into a Rules	65
2.4.2	Unification Rules into a Learning Set	67
2.4.3	Unification Using Hyperrectangles	68
2.5	Cost-Sensitive Classifier	75
2.5.1	Cost Sensitive Decision Tree Induction	76
2.5.2	Cost Sensitive Decision Tree Induction with Cost Limit	76
2.5.3	Experiments on the Cost-Sensitive Decision Tree	78
2.6	Data Privacy	80
2.6.1	Privacy Taxonomy	82
2.6.2	Dataset Partitioning	84
2.6.3	Privacy Preserving Minimal Distance Algorithms	86
2.6.4	Experiments on Privacy Preserving Minimal Distance Algorithms	88
3	Classifier Hybridization	95
3.1	Motivation	95
3.2	Topology	98
3.3	Classifier Ensemble	99
3.3.1	Diversity Measure	100
3.3.2	Diversity Assurance	104
3.3.3	Ensemble Pruning	110
3.4	Combination Rule	112
3.4.1	Taxonomy	113
3.4.2	Fuser Based on Classifier Responses	113
3.4.3	Fusers Based on Discriminants	121
3.5	Hybrid Classifier Learning for Parametric Case	133
4	Chosen Applications of Hybrid Classifiers	141
4.1	Feature Space Splitting	141
4.1.1	Classifier Model	143
4.1.2	Clustering and Selection Algorithm	143
4.1.3	Adaptive Splitting and Selection	145
4.2	Hybrid One-Class Classification	155
4.2.1	One-Class Classification	156
4.2.2	Combining One-Class Classifiers	158
4.2.3	Assuring Diversity of One-Class Classifier Ensembles	164
4.3	Imbalanced Classification	166
4.4	Hybrid Classifiers for Non-stationary Environment	168

4.4.1	Concept Drift	169
4.4.2	Online Learners	170
4.4.3	Sliding Windows	170
4.4.4	Ensemble Approach	171
4.4.5	Drift Detection	172
4.4.6	Weighted Aging Classifier Ensemble	174
5	Conclusions	179
A	Appendix	181
A.1	Hypothesis Testing	181
A.2	Dataset Description	184
