1	Quantum Ring: A Unique Playground for the Quantum-Mechanical Paradigm	1
	Vladimir M. Fomin	
1.1	Prologue	1
1.2	At Dawn	2
1.3	Fundamentals of Topological Effects	3
1.4	Renaissance	6
1.5	Florescence	9
1.5.1	Self-assembly Through Partial Overgrowth	9
1.5.2	Characterization	10
1.5.3	Various Materials Systems	11
1.5.4	Droplet Epitaxy and Lithography	11
1.5.5	Novel Manifestations of the Aharonov-Bohm Effect	12
1.5.6	Advancements of Theory	14
1.6	Multi-Faceted Horizons	16
1.6.1	Novel Topological Structures	16
1.6.2	Graphene QRs	16
1.6.3	Ordering of QRs. Metamaterials	17
1.6.4	Photonic Sources and Detectors	18
1.6.5	Spintronics. Magnetic Memory	18
	References	19
Part I Fabrication, Characterization and Physical Properties		
2	Growth and Spectroscopy of Semiconductor Quantum Rings	27
	Wen Lei and Axel Lorke	
2.1	Introduction	28
2.2	Epitaxial Growth of III–V Semiconductor Quantum Rings	29
2.2.1	Partial Overgrowth	29
2.2.2	Droplet Epitaxy	41
2.3	Spectroscopy Study of InGaAs Quantum Rings	44

2.3.1	Interband Spectroscopy	44
2.3.2	Intraband Spectroscopy	51
2.4	Summary	57
	References	58
3	0D Band Gap Engineering by MBE Quantum Rings: Fabrication and Optical Properties	61
	Jorge M. García, Benito Alén, Juan Pedro Silveira, and Daniel Granados	
3.1	Introduction	63
3.2	Fabrication of Quantum Dots and Quantum Rings	64
3.2.1	Experimental Set Up	64
3.2.2	Segregation of Indium During Growth of One Monolayer of InAs on GaAs	66
3.2.3	Formation of Quantum Dots	68
3.2.4	Formation of Quantum Rings	69
3.3	Optical Properties	72
3.3.1	Shape Dependent PL and TRPL	73
3.3.2	Bias Dependent PL and TRPL	75
3.3.3	Single QR μ PL and μ PLE	77
	References	80
4	Self-organized Quantum Rings: Physical Characterization and Theoretical Modeling	83
	V.M. Fomin, V.N. Gladilin, J.T. Devreese, and P.M. Koenraad	
4.1	Introduction	84
4.2	X-STM Characterization	85
4.3	Modeling of Shape and Materials Properties	88
4.4	Theory of Electronic Properties of One-Electron Rings, Including Magnetization	89
4.5	Observation of the AB Effect Through Magnetization	93
4.6	Theory of Two-Electron Systems and Excitons in Quantum Rings	95
4.7	Experiments on Excitonic Properties of Quantum Rings	100
4.8	Applications of QRs	102
	References	104
5	Scanning Probe Electronic Imaging of Lithographically Patterned Quantum Rings	107
	F. Martins, H. Sellier, M.G. Pala, B. Hackens, V. Bayot, and S. Huant	
5.1	Introduction	108
5.2	A Brief Introduction to the Technique of Scanning-Gate Microscopy	109
5.3	Imaging of Quantum Rings in the Low-Field Aharonov-Bohm Regime	110
5.4	Imaging Quantum Rings in the Quantum Hall Regime	113
5.5	Revealing an Analog of the Braess Paradox in Branched-Out Rectangular Rings	117
5.6	Conclusion	119
	References	119

6	Self-organized Formation and XSTM-Characterization of GaSb/GaAs Quantum Rings	123
	Andrea Lenz and Holger Eisele	
6.1	Introduction	123
6.2	Characterization by XSTM	125
6.2.1	Methodology	126
6.2.2	Image Contrasts	126
6.2.3	Stoichiometry Determination	129
6.2.4	Statistical Analysis	131
6.3	GaSb/GaAs Quantum-Ring Structure	132
6.3.1	GaSb/GaAs Quantum-Ring Size and Shape	134
6.3.2	GaSb/GaAs Quantum-Ring Stoichiometry	135
6.3.3	GaSb/GaAs Quantum-Ring Electronic States	137
6.4	Formation Process of GaSb/GaAs Quantum Rings	137
6.5	General Conclusions on the Quantum Ring Evolution	139
	References	140
7	Fabrication of Ordered Quantum Rings by Molecular Beam Epitaxy	143
	Jiang Wu and Zhiming M. Wang	
7.1	Introduction	143
7.2	Fabrication of Laterally Ordered Quantum Rings on Quantum Dot Superlattice Template	144
7.2.1	Fabrication of Ordered Quantum Ring Chains on GaAs (100) Surface	144
7.2.2	Fabrication of Laterally Ordered Quantum Ring Arrays on GaAs High Index Surfaces	148
7.3	Fabrication of Quantum Rings on Pre-patterned Substrates	152
7.3.1	Simulations of Formation of Ordered Quantum Dots and Quantum Rings Through Pre-patterning	152
7.3.2	Fabrication of GeSi Nanorings on Patterned Si (100) Substrate	153
7.4	Perspectives and Future Work	157
	References	158
8	Self-assembled Semiconductor Quantum Ring Complexes by Droplet Epitaxy: Growth and Physical Properties	161
	Stefano Sanguinetti, Takaaki Mano, and Takashi Kuroda	
8.1	Introduction	161
8.2	The Droplet Epitaxy	162
8.2.1	Fabrication of Ring Structures	164
8.2.2	Growth Model	166
8.2.3	Ring Anisotropy	170
8.2.4	Ring vs. Disk Control	172
8.3	Electronic Properties	174
8.3.1	Theoretical Predictions	174
8.3.2	Beyond Effective Mass Approximation	176

8.4 Photoluminescence Emission 177

8.4.1 Broad Area Photoluminescence 177

8.4.2 Single Nanostructure Photoluminescence 182

8.5 Carrier Dynamics in Ring Structures 185

8.5.1 Ring Shape Disorder Effects 187

8.5.2 Magneto-Photoluminescence 187

8.5.3 Single Photon Emission 189

8.5.4 Fast Exciton Dynamics in Complex Nanostructures 191

8.6 Conclusions 192

References 193

Part II Aharonov-Bohm Effect for Excitons

9 New Versions of the Aharonov-Bohm Effect in Quantum Rings 199

A.V. Chaplik and V.M. Kovalev

9.1 Introduction 199

9.2 Electron-Electron Interaction and Persistent Current in a Quantum Ring [8] 200

9.3 Electronic Absorption of the Surface Acoustic Wave by QR in a Magnetic Field [15] 204

9.3.1 Noninteracting Electrons 204

9.3.2 Two-Electron Wigner Molecule 205

9.3.3 Discussion 209

9.4 Effect of Spin-Orbit Interaction on Persistent Currents in QR [20] 211

9.5 AB Effect for Composite Particles 214

9.5.1 Excitons in 1D Ring [22] 215

9.5.2 Accounting for the Finite Width [23] 216

9.5.3 Trion X^- and Multiply Charged Excitons 221

9.6 AB Effect for Plasmons [26] 223

9.7 Polaronic Effect in QRs [30] 228

9.7.1 Electron and Hole Polarons 228

9.7.2 Excitonic Polaron and Interband Optical Transitions 231

9.8 Vertical Transport Through QR (Longitudinal Magnetoresistance) [39] 234

9.8.1 Spectrum and Wave Functions of a QR 235

9.8.2 Tunnel Current in the Model of a δ -Shaped Solenoid 236

9.8.3 Uniform Magnetic Field 238

9.9 Ring Excitons Under External Electromagnetic Radiation [40] 240

9.9.1 Model and Hamiltonian 240

9.9.2 Perturbation Theory Calculations 241

9.9.3 Resonance Frequency of the External Field 242

9.9.4 Adiabatic Approximation 242
