Preface to the second edition	VII
Preface to the first edition	IX
1 Overview	1
1.1 Where does the cosmic ray field belong?	1
1.2 Is progress in the cosmic ray field slow?	7
1.3 Main topics for future research	9
1.4 How this book is organized	11

Part I The Standard Model of Cosmic Rays

2 Cosmic ray interactions	17
2.1 Components and structure of matter	17
2.1.1 Strong, electromagnetic and weak interactions	19
2.1.2 Units of energy and interaction strength	19
2.2 Electromagnetic processes in matter	20
2.2.1 Coulomb scattering	20
2.2.2 Ionization loss	21
2.2.3 Cherenkov light	22
2.2.4 Compton scattering	23
2.2.5 Bremsstrahlung	24
2.2.6 Creation of electron-positron pairs	27
2.3 Electromagnetic collisions on magnetic and photon fields	28
2.3.1 Synchrotron radiation	28
2.3.2 Inverse Compton effect	30
2.4 Inelastic hadronic interactions below 1.000 GeV	31
2.4.1 Secondary particles spectra, average multiplicity and inelasticity	34

2.4.2	Kinematic variables and invariant cross-section	38
2.5	Nuclear fragmentation	39
3	The birth of cosmic rays	43
3.1	Stellar energetics. The pp chain	43
3.1.1	Solar neutrinos	45
3.1.2	Stellar evolution	51
3.1.3	Supernova explosions	54
3.1.4	Supernova neutrinos	55
3.1.5	Supernova remnants	59
3.2	Acceleration of cosmic rays	62
3.2.1	Stochastic acceleration of charged particles	62
3.2.2	Particle acceleration at astrophysical shocks	65
3.2.3	Acceleration with energy loss	70
4	Cosmic rays in the Galaxy	73
4.1	Interstellar matter and magnetic field	74
4.2	Basic principles of the propagation	78
4.2.1	Particle diffusion	79
4.3	Formation of the chemical composition	81
4.4	Diffuse galactic gamma rays	85
4.4.1	Relative importance of γ -ray production processes	86
4.4.2	More exact γ -ray yields	87
4.4.3	Energy spectrum of γ -rays from the central Galaxy	88
5	Cosmic rays at the top of the atmosphere	91
5.1	Cosmic ray detectors	92
5.2	Solar modulation	96
5.3	Geomagnetic field effects	99
5.4	Cosmic ray spectra and composition	102
5.4.1	Energy spectra of different cosmic ray components	107
5.4.2	Electron spectrum	116
5.4.3	Antiprotons	119
6	Cosmic rays in the atmosphere	121
6.1	Atmospheric structure	122
6.2	Analytic approximations	124
6.2.1	Muons from meson decay	126
6.3	Muon fluxes in the atmosphere	128
6.3.1	Experimental results on atmospheric muons	129
7	Cosmic rays underground	137
7.1	High energy muons underground	138
7.2	Atmospheric neutrinos	146
7.2.1	Upward-going muons	151

7.2.2	Flux calculations	155
7.2.3	Experimental data	159
7.3	Neutrino oscillations	162
7.3.1	Matter effects	164
7.3.2	Oscillation parameters	165

Part II Contemporary Challenges

8	Cosmic ray showers	175
8.1	Electromagnetic cascades	176
8.1.1	Electromagnetic cascade theory	177
8.1.2	Monte Carlo calculations	181
8.2	Hadronic showers	185
8.2.1	Air shower detection	192
8.2.2	Reconstruction of the shower parameters from the observations	194
8.3	Extension of the hadronic interaction models	205
8.3.1	The minijet model	206
8.3.2	Monte Carlo realization of QCD models	208
8.3.3	Contemporary models used for the analysis of air shower data	211
8.4	Energy spectrum and composition at the knee	214
9	The end of the cosmic ray spectrum	223
9.1	Cosmic microwave background	224
9.2	UHECR interactions on the microwave background	225
9.2.1	Propagation of UHE protons in the Universe	229
9.2.2	Propagation of UHE nuclei	233
9.3	Experimental results and implications	235
9.3.1	Giant air shower detectors	235
9.3.2	Spectrum and composition of UHECR	239
9.3.3	Possible astrophysical sources of UHECR	245
9.3.4	Exotic models	249
9.4	UHECR astronomy	253
9.4.1	Arrival directions of UHECR	254
9.4.2	UHECR and the cosmic magnetic fields	258
9.5	Current status of the field	262
9.6	Future detectors	264
10	High energy neutrino and gamma-ray astronomy	269
10.1	The neutrino cross-section at very high energy	271
10.2	Gamma-ray telescopes	272
10.2.1	Satellite gamma-ray telescopes	272
10.2.2	Ground-based gamma-ray telescopes	273

10.3 Galactic gamma-ray and neutrino fluxes	276
10.3.1 Galactic binary systems - Cygnus X-3 tales	277
10.3.2 Supernova remnants	279
10.3.3 Observational constraints	280
10.4 Extragalactic sources	284
10.4.1 Observations of GeV and TeV gamma-rays from extragalactic sources	285
10.4.2 Models of gamma-ray production in AGN	287
10.4.3 Models of neutrino production in AGN	291
10.4.4 Neutrino production in GRB	293
10.4.5 Diffuse extragalactic neutrinos	294
10.4.6 Summary of the expected neutrino fluxes	295
10.5 Neutrinos and UHE cosmic rays	298
10.5.1 Neutrinos from propagation of ultra high energy cosmic rays	300
10.6 Detection of high energy astrophysical neutrinos	303
10.6.1 Detection of neutrino-induced showers	304
10.6.2 Neutrino oscillations and neutrino telescopes	307
10.6.3 Neutrino telescopes	308
A Appendix	315
A.1 Physical constants	315
A.2 Astrophysical constants	316
A.3 Properties of particles discussed in the book	316
References	319
Index	331
