

Table of Contents

Regular Papers

On the Use of the Moment Equations for Parameter Inference, Control and Experimental Design in Stochastic Biochemical Reaction Networks	1
<i>Jakob Ruess and John Lygeros</i>	
Numerical Approximation of Rare Event Probabilities in Biochemically Reacting Systems	5
<i>Linar Mikeev, Werner Sandmann, and Verena Wolf</i>	
An Approximate Execution of Rule-Based Multi-level Models	19
<i>Tobias Helms, Martin Luboschik, Heidrun Schumann, and Adeline M. Uhrmacher</i>	
Computing Cumulative Rewards Using Fast Adaptive Uniformisation . . .	33
<i>Frits Dannenberg, Ernst Moritz Hahn, and Marta Kwiatkowska</i>	
Linking Discrete and Stochastic Models: The Chemical Master Equation as a Bridge between Process Hitting and Proper Generalized Decomposition	50
<i>Courtney Chancellor, Amine Ammar, Francisco Chinesta, Morgan Magnin, and Olivier Roux</i>	
Coarse-Grained Brownian Dynamics Simulation of Rule-Based Models	64
<i>Michael Klann, Loïc Paulevé, Tatjana Petrov, and Heinz Koepl</i>	
Modelling and Analysis of Phase Variation in Bacterial Colony Growth	78
<i>Ovidiu Pârvu, David Gilbert, Monika Heiner, Fei Liu, and Nigel Saunders</i>	
Using Probabilistic Strategies to Formalize and Compare α -Synuclein Aggregation and Propagation under Different Scenarios	92
<i>Lucian Bentea, Peter Csaba Ölveczky, and Eduard Bentea</i>	
Dynamic Image-Based Modelling of Kidney Branching Morphogenesis	106
<i>Srivathsan Adivarahan, Denis Menshykau, Odyssé Michos, and Dagmar Iber</i>	

Statistical Model Checking Based Calibration and Analysis
of Bio-pathway Models 120
*Succheendra K. Palaniappan, Benjamin M. Gyori, Bing Liu,
David Hsu, and P.S. Thiagarajan*

Constraint Programming in Community-Based Gene Regulatory
Network Inference 135
Ferdinando Fioretto and Enrico Pontelli

ABC–Fun: A Probabilistic Programming Language for Biology 150
Anastasis Georgoulas, Jane Hillston, and Guido Sanguinetti

A Temporal Logic Approach to Modular Design of Synthetic Biological
Circuits 164
Ezio Bartocci, Luca Bortolussi, and Laura Nenzi

A Lattice-Theoretic Framework for Metabolic Pathway Analysis 178
Yaron A.B. Goldstein and Alexander Bockmayr

On the Hybrid Composition and Simulation of Heterogeneous
Biochemical Models 192
*Katherine Chiang, François Fages, Jie-Hong Jiang, and
Sylvain Soliman*

On the Verification and Correction of Large-Scale Kinetic Models
in Systems Biology 206
*Attila Gábor, Katalin M. Hangos, Gábor Szederkényi, and
Julio R. Banga*

Context-Sensitive Flow Analyses: A Hierarchy of Model Reductions 220
Ferdinanda Camporesi, Jérôme Feret, and Jonathan Hayman

Posters

ARNI: Abductive Inference of Complex Regulatory Network
Structures 235
*Nataly Maimari, Calin-Rares Turliuc, Krysia Broda,
Antonis Kakas, Rob Krams, and Alessandra Russo*

A Systems Biology and Ecology Framework for POPs Bioaccumulation
in Marine Ecosystems 238
*Marianna Taffi, Nicola Paoletti, Pietro Liò, Luca Tesei,
Emanuela Merelli, and Mauro Marini*

A Symbolic Approach Based on Model Checking and Constraint
Solving Techniques for Reverse Engineering of Thomas Networks
Parameters 240
*Emmanuelle Gallet, Matthieu Manceny, Pascale Le Gall, and
Paolo Ballarini*

Compositionality Results for Cardiac Cell Dynamics	242
<i>Md. Ariful Islam, Abhishek Murthy, Ezio Bartocci, Antoine Girard, Scott A. Smolka, and Radu Grosu</i>	
Quantification of Biological Network Perturbations: Impact Assessment Using Causal Biological Networks	245
<i>Florian Martin, Alain Sewer, Marja Talikka, Yang Xiang, Julia Hoeng, and Manuel C. Peitsch</i>	
Deciphering the Transcriptional Landscape of <i>Caulobacter crescentus</i> at Base Pair Resolution	247
<i>Bo Zhou, Jared Schrader, Beat Christen, Harley McAdams, and Lucy Shapiro</i>	
Identifiability Analysis and Improved Parameter Estimation of a Human Blood Glucose Control System Model	248
<i>Eszter Lakatos, Domokos Mészéna, and Gábor Szederkényi</i>	
RNA Interference in Cancer and Cell Cycle Networks: A Case Study of E2F Proteins	250
<i>Jesús Miró-Bueno</i>	
A Balancing Act: Parameter Estimation for Biological Models with Steady-State Measurements	253
<i>Andrzej Mizera, Jun Pang, Thomas Sauter, and Panuwat Trairatphisan</i>	
A Fusion Approach Linking Signaling Logic and Metabolic Mass-Flow Kinetics in Hepatocytes	255
<i>Anke Ryll, Joachim Bucher, Jens Niklas, and Steffen Klamt</i>	
Esther: Introducing an Online Platform for Parameter Identification of Boolean Networks	257
<i>Adam Streck, Juraj Kolčák, Heike Siebert, and David Šafránek</i>	
Identifying Latent Dynamic Components in Biological Systems	259
<i>Ivan Kondofersky, Christiane Fuchs, and Fabian J. Theis</i>	
Next-Newtomics: The Next Generation Repository for Bioinformatical Interpreted Omics Datasets from the Newt <i>Notophthalmus</i> <i>viridescens</i>	261
<i>Marc Bruckskotten, Mario Looso, and Thomas Braun</i>	
miRNA Expression Analysis during Heart Regeneration of <i>N.</i> <i>viridescens</i>	263
<i>Mario Herzog, Stefan Günther, Thomas Braun, and Mario Looso</i>	

Algorithm to Predict G-Quadruplex Folding through Score Computing	264
<i>Bedrat Amina, Guédin Aurore, Amrane Samir, Renaud de la Faverie Amandine, and Mergny Jean-Louis</i>	
Optimization Based Inference of Metabolic Networks from Metabolome Data	266
<i>Melik Öksüz, Hasan Sadıkoğlu, and Tunahan Çakır</i>	
PHISTO: A New Web Platform for Pathogen-Human Interactions	268
<i>Saliha Durmuş Tekir, Tunahan Çakır, Emre Ardiç, İlknur Karadeniz, Arzucan Özgür, Fatih Erdoğan Sevilgen, and Kutlu Ö. Ülgen</i>	
Frameshift Correction in De Novo Assembled Transcriptome Data Using Peptide Data, Blast Sequence Alignments and Hidden Markov Models	270
<i>Stephan Neese and Mario Looso</i>	
From Prokaryote Genome Sequencing to Pan-Genomic Modeling	271
<i>Carsten Künne</i>	
A Simulation Approach to Detect Oscillating Behaviour in Stochastic Population Models	273
<i>Jorge Júlvez</i>	
On Bistability Causing Structures in <i>Escherichia Coli</i> 's Metabolism	276
<i>Bernhard Kramer and Carsten Conradi</i>	
Mathematical Modelling of the Function of Ubiquitylation in TNFR1-MediatedNF- κ B Signalling	278
<i>Leonie Amstein, Nadine Schöne, Simone Fulda, and Ina Koch</i>	
Organizing SIV Gene Network Modules into Graph Database	280
<i>Raquel L. Costa, Jean-Marc Schwartz, David L. Robertson, and Fábio Porto</i>	
Author Index	283
