0. Introduction	15
1. Foundation	17
1. Hydrodynamics	19
1.1. Governing equations	19
1.1.1. Potential formulation	20
1.2. Linearized problems	21
1.2.1. Basic formulation	21
1.3. Diffraction problem	22
1.3.1. Periodical motions	22
1.3.2. Boundary value problem	23
1.3.3. Hydrodynamic parameters	25
1.3.4. Radiation problem	26
1.4. Quasi 2D formulations	26
1.4.1. Vertical cylindrical bodies	26
1.4.2. Vertical quasi-cylindrical bodies	28
1.4.3. Horizontal cylindrical bodies	28
1.4.4. Vertical axisymmetric bodies	29
1.5. Qualitative estimates	30
1.6. Additional relations	31
2. Integral transforms	33
2.1. Definitions and properties	33
2.1.1. Spectral problem	34
2.1.2. Expansion formula	35
2.1.3. Transformation of kernels	36
2.1.4. Hardy-Titchmarsh relation	36
2.2. Methods for solution of PDE	37
2.2.1. Separation of variables	37
2.2.2. Boundary Green Function	39
2.3. Transforms with continuous spectrum	39
2.3.1. Fourier transform, exponential kernels	39

2.3.2.	Laplace and Hilbert transforms	40
2.3.3.	Fourier transforms, trigonometric kernels	41
2.3.4.	Havelock transform	42
2.3.5.	Mellin transform	43
2.3.6.	Hankel transform	44
2.3.7.	Kontorovich-Lebedev transform	45
2.4.	Transforms with discrete spectrum	45
2.4.1.	Fourier transforms, trigonometric kernels	46
2.4.2.	Fourier transforms, periodical conditions	46
2.4.3.	Havelock transform	48
2.4.4.	Legendre transform	50
2.4.5.	Mathieu transform	51
3.	Fractional Integrals	53
3.1.	Abel fractional integrals	53
3.1.1.	The first version	53
3.1.2.	The second version	54
3.2.	Discontinuous integrals	55
3.2.1.	General relations	55
3.2.2.	Weber integrals	56
3.2.3.	Sonin integrals	56
4.	Examples of diffraction problems	59
4.1.	Vertical circular cylinder	59
4.1.1.	Formulation	59
4.1.2.	Expression for potential	59
4.2.	Wave-maker	60
4.2.1.	Fomulation of the BVP	61
4.2.2.	Expression for potential	61
4.2.3.	Boundary Green Function	62
4.3.	Barriers	62
4.3.1.	Partly submerged barrier	63
4.3.2.	Wholly immersed barrier	63
4.4.	Additional relations	64
II.	Sequential Integral Transforms	65
1.	Radiation of vertical cylindrical bodies	67
1.1.	Formulation of the problem	67
1.2.	Method of solution	68
1.2.1.	Spectral systems	68
1.2.2.	Potential	69
1.2.3.	Added masses	70
1.3.	Half-plane with a plunger	71

1.4. Circular cross-section	72
1.5. Elliptical cross-section	73
1.6. Conclusion	74
2. Plane sloping beach	75
2.1. Method of solution	76
2.2. Normal incidence	78
2.2.1. Dirichlet potential	78
2.2.2. Wave potential	79
2.2.3. Scattering by shoreline	83
2.3. Oblique incidence	83
2.3.1. Dirichlet potential	83
2.3.2. Wave potential	84
2.3.3. Scattering by shoreline	90
2.4. Conclusion	91
2.5. Additional relations	91
III. Double Integral Transforms	93
1. Axisymmetric bodies with vertical axis	95
1.1. Formulation of the problem	97
1.1.1. Curvilinear coordinates	97
1.2. Small body	98
1.2.1. Spectral systems	99
1.2.2. Potential and integral equation	100
1.2.3. Angle brackets	103
1.2.4. Boundary Green Function	103
1.3. Finite body	104
1.3.1. Spectral systems	104
1.3.2. Potential and integral equation	106
1.4. Scattered waves	107
1.5. Spherical coordinates	108
1.5.1. Submerged sphere, infinite depth	109
1.5.2. Submerged sphere, finite depth	110
1.5.3. Floating semi-sphere, infinite depth	111
1.6. Spheroidal coordinates	112
1.6.1. Prolate spheroid	112
1.6.2. Oblate spheroid	113
1.7. Conclusion	114
1.8. Additional relations	115

2. Cylindrical bodies with horizontal axis	117
2.1. Formulation of the problem	118
2.1.1. Curvilinear coordinates	118
2.2. Small body	120
2.2.1. Spectral systems	120
2.2.2. Potential and integral equation	121
2.2.3. Angle brackets	123
2.2.4. Boundary Green function	124
2.3. Finite body	125
2.3.1. Spectral systems	125
2.3.2. Potential and integral equation	127
2.4. Floating bodies	128
2.5. Scattered waves	129
2.6. Circular cylinder	131
2.6.1. Normal incidence, infinite depth	131
2.6.2. Oblique incidence, infinite depth	133
2.6.3. Normal incidence, finite depth	134
2.6.4. Oblique incidence, finite depth	135
2.6.5. Floating cylinder, infinite depth	136
2.7. Elliptical cylinder	137
2.8. Conclusion	138
2.9. Additional relations	138
IV. Triplets of Integral Transforms	141
1. Plates on free surface	143
1.1. Introduction	143
1.2. Formulation	144
1.3. Dual integral equations	146
1.3.1. Fredholm-2 equation	147
1.3.2. Reduction of kernel	148
1.3.3. A generalization	150
1.4. Circular plate	151
1.4.1. Formulation	151
1.4.2. Potential and DIE	151
1.4.3. Fredholm-2 equation	152
1.4.4. Asymptotical solution	156
1.4.5. Havelock representations	157
1.4.6. Scattered waves	158
1.5. Long plate	159
1.5.1. Formulation	159
1.5.2. Dual integral equations	160
1.5.3. Fredholm-2 equation	160
1.5.4. Deep water approximation	162

1.5.5.	Symmetrical component	163
1.5.6.	Asymmetrical component	164
1.6.	Conclusion	165
1.7.	Additional relations	165
1.7.1.	Product of the Bessel functions	165
1.7.2.	Contour integrals	166
2.	Immersed horizontal plates	169
2.1.	Introduction	169
2.2.	Potential	169
2.3.	Dual integral equations	171
2.4.	Circular plate	174
2.4.1.	Dual equations	174
2.4.2.	Reductions of kernels	176
2.4.3.	Zero-component	177
2.4.4.	Scattered waves	178
2.5.	Long plate	179
2.5.1.	Potential and DIE	179
2.5.2.	Fredholm IE	180
2.5.3.	Approximations	182
2.5.4.	Scattered waves	183
2.6.	Conclusion	184
2.7.	Additional relations	184
3.	Vertical ducts and barriers	187
3.1.	Introduction	187
3.2.	Formulation	188
3.3.	Circular duct	189
3.3.1.	Potential and dual equations	190
3.3.2.	A partly submerged duct, $k \ll 1$	193
3.3.3.	A wholly submerged duct, $k \gg 1$	196
3.3.4.	A partly submerged duct, $k \gg 1$	198
3.3.5.	A wholly submerged duct, $k \ll 1$	200
3.4.	Barriers	201
3.4.1.	Potential and DIE	201
3.4.2.	A partly submerged barrier, $\kappa \ll 1$	203
3.4.3.	A wholly immersed barrier, $\kappa \gg 1$	204
3.4.4.	A partly submerged barrier, $\kappa \gg 1$	205
3.4.5.	A wholly submerged barrier, $\kappa \ll 1$	206
3.5.	Conclusion	206
3.6.	Additional relations	207
3.6.1.	Discontinuous integrals-1	207
3.6.2.	Fractional integrals-1	207
3.6.3.	Discontinuous integrals-2	208
3.6.4.	Fractional integrals-2	209

V. Generalised Integral Transforms	211
1. Wave-current system	213
1.1. Generalized Havelock transforms	213
1.2. One-parameter transform. Half-infinite interval	214
1.2.1. Spectral system	214
1.2.2. Expansion theorem	218
1.2.3. Partial cases	219
1.3. Two-parameter transforms. Half-infinite interval	220
1.3.1. Spectral problem	220
1.3.2. Expansion theorem	221
1.3.3. Partial case	222
1.4. One-parameter transforms. Finite interval	222
1.4.1. Spectral system	222
1.4.2. Expansion theorem	223
1.5. Two-parameter transforms. Finite interval	224
1.5.1. Spectral problem	224
1.5.2. Expansion theorem	225
2. Green Functions	227
2.1. 2D problem. Normal incidence. Infinite depth.	227
2.2. 3D problems. Infinite depth	228
2.2.1. Quasi 2D problem	228
2.2.2. 3D problems	229
2.3. 3D problems. Finite depth	231
2.4. Channel	231
2.4.1. Formulation	232
2.4.2. Fourier transform	232
2.4.3. Havelock transform	232
2.4.4. Green Function	233
2.5. Table of Green Functions	233
2.5.1. 2D problems	233
2.5.2. 3D problems	235
2.5.3. Channel	237
2.6. Conclusion	239
2.7. Additional relations	239
VI. Appendix	241
A. Curvilinear coordinates	243
A.1. Orthogonal coordinate systems	243
A.2. Vector operations	244
A.2.1. Vector operations in curvilinear coordinates	244
A.3. Special coordinate systems	245

B. Special functions	247
B.1. Exponential integral	247
B.2. Sine and Cosine Integrals	248
B.3. Bessel and Struve functions	248
B.3.1. Bessel functions	248
B.3.2. Struve functions	250
B.4. Legendre polynomials and functions	251
B.4.1. Legendre polynomials	251
B.4.2. Complementary Legendre polynomials	251
B.4.3. Toroidal functions	251
B.4.4. Spheroidal functions	252
B.5. Confluent hyper-geometric function	253
B.5.1. The first branch	253
B.5.2. The second branch	254
B.5.3. Chebyshev polynomials and functions	255
B.6. Elliptic integrals	256
B.7. Mathieu functions	256
B.8. Havelock functions	257
B.9. Number sequences	258
B.10. Generalised functions	259
B.10.1. Delta function	259
B.10.2. Heaviside function	259
C. PDE. Separation of variables	261
C.1. Laplace equation	261
C.1.1. Axesymmetrical structures	261
C.2. Helmholtz equation	264
C.2.1. Cylindrical structures	264
C.3. Modified Helmholtz equation	266
C.3.1. Cylindrical structures	266
