

Contents

1	Introduction	1
1.1	Background	1
1.2	Previous Studies	2
1.2.1	A Brief History of Ionospheric Measurement	2
1.2.2	Evolution from Long-Term HF Planning to Nowcasting and Space Weather Applications	4
1.3	Layout of the Book	5
	Suggested Readings	9
2	The General Structure of the Ionosphere	11
2.1	Introduction	11
2.2	Main Sources of Ionization of the Earth's Upper Atmosphere	12
2.2.1	Sun and Solar Interactions	12
2.2.2	The Solar Wind, the Geomagnetic Field, and the Magnetosphere	18
2.2.3	Solar and Geomagnetic Indices	25
2.3	General Atmosphere	29
2.3.1	General Description of the Atmospheric Regions, Composition, and Temperature	29
2.3.2	Formation of the Earth's Ionosphere	33
2.3.3	General Electron Density Profile	37
2.4	Ionospheric Regions	39
2.4.1	Regular Ionospheric Regions	39
2.4.2	Sporadic Ionospheric Layer Es	44
2.5	Ionospheric Irregularities	44
2.5.1	Travelling Ionospheric Disturbances	45
2.5.2	Spread-F	46
	Suggested Readings	47

3	Ionospheric Measurements and Characteristics	49
3.1	Introduction	49
3.2	Basic Physical Principles of the Magneto-Ionic Theory	50
3.2.1	Basic Equations of an Electromagnetic Wave	50
3.2.2	The Appleton–Hartree Formula	54
3.3	Vertical and Oblique Incidence Sounding in the Ionosphere	58
3.3.1	Vertical Incidence Sounding	58
3.3.2	Oblique and Backscatter Sounding	60
3.3.3	Ionosondes	62
3.3.4	Ionograms and Their Interpretation	66
3.4	Ionospheric Scattering	70
3.4.1	Incoherent Scatter Radar: EISCAT	71
3.4.2	Coherent Scatter Radar: SuperDARN	72
3.5	In-Situ Measurements and Trans-Ionospheric Propagation	73
3.5.1	Topside Measurements	73
3.5.2	Ionospheric Sounding with GNSS Signals	76
	Suggested Readings	78
4	Ionospheric Spatial and Temporal Variations	81
4.1	Introduction	81
4.2	Geographic and Geomagnetic Variations	82
4.2.1	High-Latitude Ionosphere	84
4.2.2	Equatorial Ionosphere	84
4.3	Daily and Seasonal Variations at Mid-Latitudes	87
4.3.1	D Region	87
4.3.2	E and F1 Layers	88
4.3.3	F2 Layer	89
4.4	Solar Cycle Variations at Mid-Latitude	96
	Suggested Readings	99
5	Ionospheric Models for Prediction and Forecasting	101
5.1	Introduction	101
5.2	The Ionospheric Inverse Problem	102
5.3	Theoretical and Parameterised Ionospheric Models	102
5.4	Models of the Electron Density Profile in the Ionosphere	105
5.4.1	True Height of Peak Density: The Shimazaki Formula and Subsequent Improvements	106
5.4.2	Bradley and Dudeney Model	108
5.4.3	International Reference Ionosphere (IRI): Basic Principles and Equations for the Electron Density Profile	109
5.4.4	The NeQuick Model	114
5.5	Assimilation Models in the Ionosphere	116
	Suggested Readings	119

6	Ionospheric Prediction for Radio Propagation Purposes	123
6.1	Introduction	123
6.2	Long-Term Prediction Maps	124
6.2.1	Global Prediction Maps	124
6.2.2	Regional Prediction Maps	130
6.2.3	Local Single Station Models	135
6.3	Instantaneous Mapping	136
6.3.1	Contouring Techniques	137
6.3.2	Instantaneous Mapping Based on Additional Screen-Point Values	138
6.4	Nowcasting: Real-Time Ionospheric Specification	140
6.4.1	IPS Global and Regional Nowcasting Maps	140
6.4.2	SIRMUP	141
6.5	Testing Procedures	143
	Suggested Readings	144
7	Total Electron Content Modelling and Mapping	147
7.1	Introduction	147
7.2	TEC Evaluation Technique from RINEX Files	148
7.3	Total Electron Content Modelling	149
7.4	Global Total Electron Content Mapping	155
7.5	Regional Total Electron Content Mapping	156
7.6	Total Electron Content and Ionospheric Tomography	159
	Suggested Readings	160
8	Ionospheric Forecasting	161
8.1	Introduction	161
8.2	Ionospheric Disturbances	162
8.2.1	Sudden Ionospheric Disturbance (SID)	162
8.2.2	Polar Cap Absorption	163
8.2.3	Ionospheric Storm	163
8.3	Ionospheric Forecasting Techniques	166
8.3.1	Statistical Methods	167
8.3.2	Neural Network Methods	170
8.3.3	Forecasting Maps	175
	Suggested Readings	181
9	Prediction and Nowcasting for HF Applications and Radio Links	183
9.1	Introduction	183
9.2	HF Ionospheric Performance Predictions	185
9.2.1	Geometrical Aspects or Basic Principles of an HF Radio Link: The Secant Law and Martyn Theorem	185
9.2.2	MUF Definition and Calculation	187
9.2.3	Determination of the Path of an Electromagnetic Wave in the Ionosphere	189

9.2.4	Definition and Calculation of Attenuation and LUF	191
9.2.5	Point-to-Point HF Prediction and Nowcasting.	196
9.2.6	HF Area Prediction and Nowcasting	201
9.3	Existing Prediction and Nowcasting Propagation Procedures	202
9.3.1	IONCAP, VOACAP, and ICECAP.	203
9.3.2	The IPS Advanced Stand Alone Prediction System.	203
9.3.3	France Telecom Method.	204
9.4	What Purpose Do Ionospheric Prediction, Nowcasting, and Forecasting Serve?.	205
	Suggested Readings.	206
10	Current and Future Trends in Ionospheric Prediction and Forecasting	209
10.1	Introduction	209
10.2	Ionospheric Prediction and Forecasting in Radio Wave Propagation as an Important Contribution to Space Weather	210
10.3	Mitigation of Disturbances and Signal Errors in GNSS and Other Systems	211
10.3.1	Navigation Systems	211
10.3.2	Communication Systems	214
10.3.3	Surveillance	216
10.4	Lithosphere and Ionosphere Coupling	217
10.5	Conclusions	219
	Suggested Readings.	220
	Appendix A	223
	Appendix B	227
	Bibliography	231
	About the Authors.	233
	Index.	235
