1	Introduction/Definition	1
1.1	The Regulatory Environment (Laws, Standards, Guidelines)	2
1.2	Mock-up Study	4
1.3	Material Requirements and Construction	6
	References	7
2	Isolators for Personnel- and Environmental Protection	9
2.1	Personal Protection Isolators in the Pharmaceutical Industry	10
2.1.1	Single Use Isolator (Soft Wall)	11
2.1.2	Isolators for the Production of Highly Active Ingredients	12
2.1.3	Negative Pressure Glove Box for Pharmaceutical Applications	18
2.1.4	Blister Machine Isolator	20
2.1.5	Isolation of Tablet Manufacturing of High Active Pharmaceutical Ingredients	22
2.1.6	Bottle Filling Line for High Active Tablets	23
2.1.7	Glove Box with Pure Gas Atmosphere (Inert Gas)	25
2.1.8	Hot Cell/Isolator for Aseptic Work with Radioactive Substances/Radiopharmaceuticals	30
	References	32
3	Product Protection Isolators	33
3.1	Closed RABS	33
3.2	Investment and Operating Costs Comparison of Aseptic Isolators and RABS	37
3.3	Safety Isolator for Aseptic Operation	39
3.4	Isolator for Aseptic Production	43
3.5	Aseptic Operated Product and Personnel Protection Isolators	46
3.5.1	Cytotoxic Drug Preparation Isolator	46

3.5.2	Isolator System for Aseptic Filling of Hazardous Products in Small Batches	49
3.5.3	Isolator for the Aseptic Production of Hazardous Finished Products	52
3.6	Isolators and RABS in the Food Industry	53
3.7	Isolator for Laboratory Animal Housing	56
	References	58
4	Safe Change Filter Systems for Isolators, Containments, and RABS	61
4.1	Push–Push Filter	62
4.2	Bag-in, Bag-out Filter	64
4.3	The Filter Box (FiBo)	67
4.4	Filter Cartridge (FiPa)	68
	References	71
5	Access Devices	73
5.1	Requirements for Gloves Used in Isolators	73
5.1.1	Application	74
5.1.2	Glove Systems for the Work with Dangerous Substances	76
5.1.3	Aseptically Replaceable Glove System	76
5.1.4	Stretching Device for Isolator Gloves	78
5.2	Half Suit	78
5.3	Manipulator	79
	References	80
6	Aseptic Transfer Systems Into and Out of Barrier Isolators and RABS	81
6.1	Aseptic Transfer Systems Solids	81
6.1.1	E-beam Decontamination Tunnel	82
6.1.2	Hot Air Sterilization and Depyrogenation Tunnel	84
6.1.3	Decontamination Airlock	85
6.1.4	Transfer Isolator	86
6.1.5	Rapid Transfer Port	88
6.1.6	Biosafe Transfer System (Sartorius Stedim)	92
6.1.7	The Mouse Hole	93
6.1.8	Liner Transfer System	94
6.1.9	Transfer System Stoppers and Caps	95
6.2	Aseptic Transfer Systems (Liquid)	97
6.2.1	Sartorius Aseptic Liquid Transfer System	97
6.2.2	DPTE Liquid Transfer System	98
6.2.3	Drainage Systems	99
6.3	Transfer Systems Containment Solid	100

6.3.1	RTP	100
6.3.2	Vacuum Airlock	100
6.3.3	Split Butterfly Valve	102
	References	103
7	Cleaning	105
7.1	Dry Cleaning (Vacuum Cleaner with HEPA Filter)	105
7.2	Wet Cleaning, CIP	106
	References	107
8	Decontamination of Aseptically Operated Isolators	109
8.1	Evaporator Systems	110
8.1.1	Integrated Evaporator Systems	110
8.1.2	External and Mobile Hydrogen Peroxide Gas Generators	113
8.2	Other Gases and Vapours for the Isolator Decontamination	115
8.2.1	Peracetic Acid	115
8.2.2	Ethylene Oxide	115
8.2.3	Chlorine Dioxide	115
8.2.4	Formaldehyde	116
8.2.5	The Steam–Air Ozone (DOL) Process	116
8.2.6	H ₂ O ₂ Fogging	117
	References	119
9	Monitoring of the Process Environment	121
9.1	Physical Monitoring	122
9.1.1	Temperature	122
9.1.2	Pressure	122
9.1.3	Particles in the Containment Air	123
9.1.4	Measurement of the H ₂ O ₂ Concentration in an Aseptic Isolator	124
9.1.5	Air Velocity	127
9.1.6	Relative Humidity	128
9.1.7	The Oxygen Measurement	129
9.1.8	Leakage Test of the Containment	129
9.1.9	Glove Leak Test	131
9.2	Microbiological Monitoring	135
9.2.1	Surfaces Sampling	135
9.2.2	Airborne Viable	136
	References	138
10	System Validation	139
10.1	The Validation of Isolators	141
10.1.1	The Validation Master Plan (VMP)	141

10.1.2	Risk Assessment: Requirements of Directive 2006/42/EC on Machinery	141
10.1.3	Risk Assessment: Requirements in Accordance with Good Manufacturing Practice (GMP).	142
10.1.4	Factory Acceptance Test	143
10.2	Design Qualification (DQ).	143
10.3	Installation Qualification (IQ)	143
10.4	Operation Qualification (OQ).	144
10.4.1	Isolator Integrity Test	145
10.4.2	Air Velocity Test	145
10.4.3	HEPA Filter Integrity Test.	145
10.4.4	Isolator/RABS Cleanliness Class	147
10.4.5	Airflow Pattern	147
10.4.6	Training	147
10.5	The Development of a Plant-Specific Decontamination Cycle	148
10.5.1	Temperature, Humidity and H ₂ O ₂ -Distribution (Mapping)	148
10.5.2	Initial Examination of the Biological Indicators (BI)	149
10.5.3	The Determination of the D-value	150
10.5.4	Determination of the Positions with Unfavorable Surface	152
10.5.5	Determining the Endpoint of the Aeration	153
10.5.6	The Microbiological Qualification	154
10.6	Cleaning Validation of Isolators	156
10.6.1	Swab Test	156
10.6.2	Dust Collection in the Vicinity of the Isolator	156
10.7	Performance Qualification (PQ)	157
10.7.1	Growth Promotion Test of Nutrient Media	157
10.7.2	Gas Tightness Testing of Primary Packaging Material.	158
10.7.3	Worst-Case Scenario.	159
