I'm writing a book. I've got the page numbers done.
Unknown author.

Preface — v

Notation — ix

0 Introduction — 1

- 0.1 Definition and a (very brief) historical overview — 1
- 0.2 Continuous vs. discrete time — 3
- 0.3 The dynamical systems point of view — 7
- 0.4 Examples — 9

1 Basic notions — 17

- 1.1 Invariant and periodic points — 17
- 1.2 Invariant sets — 23
- 1.3 Transitivity — 28
- 1.4 Limit sets — 33
- 1.5 Topological conjugacy and factor mappings — 35
- 1.6 Equicontinuity and weak mixing — 44
- 1.7 Miscellaneous examples — 57

2 Dynamical systems on the real line — 73

- 2.1 Graphical iteration — 73
- 2.2 Existence of periodic orbits — 80
- 2.3 The truncated tent map — 84
- 2.4 The double of a mapping — 87
- 2.5 The Markov graph of a periodic orbit in an interval — 91
- 2.6 Transitivity of mappings of an interval — 101

3 Limit behaviour — 117

- 3.1 Limit sets and attraction — 117
- 3.2 Stability — 126
- 3.3 Stability and attraction for periodic orbits — 132
- 3.4 Asymptotic stability in locally compact spaces — 143
- 3.5 The structure of (asymptotically) stable sets — 153

4 Recurrent behaviour — 165

- 4.1 Recurrent points — 165

4.2	Almost periodic points and minimal orbit closures —	169
4.3	Non-wandering points —	175
4.4	Chain-recurrence —	182
4.5	Asymptotic stability and basic sets —	197
5	Shift systems —	218
5.1	Notation and terminology —	218
5.2	The shift mapping —	223
5.3	Shift spaces —	226
5.4	Factor maps —	236
5.5	Subshifts and graphs —	244
5.6	Recurrence, almost periodicity and mixing —	253
6	Symbolic representations —	282
6.1	Topological partitions —	282
6.2	Expansive systems —	293
6.3	Applications —	302
7	Erratic behaviour —	325
7.1	Stability revisited —	325
7.2	Chaos(1): sensitive systems —	336
7.3	Chaos(2): scrambled sets —	342
7.4	Horseshoes for interval maps —	355
7.5	Existence of a horseshoe —	365
8	Topological entropy —	378
8.1	The definition —	378
8.2	Independence of the metric; factor maps —	387
8.3	Maps on intervals and circles —	391
8.4	The definition with covers —	394
8.5	Miscellaneous results —	402
8.6	Positive entropy and horseshoes for interval maps —	406
A	Topology —	423
A.1	Elementary notions —	423
A.2	Compactness —	426
A.3	Continuous mappings —	428
A.4	Convergence —	430
A.5	Subspaces, products and quotients —	432
A.6	Connectedness —	434
A.7	Metric spaces —	437
A.8	Baire category —	444

A.9	Irreducible mappings —	446
A.10	Miscellaneous results —	449
B	The Cantor set —	453
B.1	The construction —	453
B.2	Proof of Brouwer's Theorem —	456
B.3	Cantor spaces —	461
C	Hints to the Exercises —	465
Literature — 481		
Index — 485
