

Contents

1	Mathematical Part	1
1.1	Introduction	1
1.2	Elements From the Theory of Linear Spaces	2
1.2.1	Coordinate Transformations	2
1.3	Inner Product – Metric	6
1.4	Tensors	10
1.4.1	Operations of Tensors	13
1.5	The Case of Euclidean Geometry	14
1.6	The Lorentz Geometry	17
1.6.1	Lorentz Transformations	18
1.7	Algebraic Determination of the General Vector Lorentz Transformation	26
1.8	The Kinematic Interpretation of the General Lorentz Transformation	40
1.8.1	Relativistic Parallelism of Space Axes	40
1.8.2	The Kinematic Interpretation of Lorentz Transformation	42
1.9	The Geometry of the Boost	43
1.10	Characteristic Frames of Four-Vectors	48
1.10.1	Proper Frame of a Timelike Four-Vector	48
1.10.2	Characteristic Frame of a Spacelike Four-Vector	49
1.11	Particle Four-Vectors	50
1.12	The Center System (CS) of a System of Particle Four-Vectors	52
2	The Structure of the Theories of Physics	55
2.1	Introduction	55
2.2	The Role of Physics	56
2.3	The Structure of a Theory of Physics	59
2.4	Physical Quantities and Reality of a Theory of Physics	60
2.5	Inertial Observers	62
2.6	Geometrization of the Principle of Relativity	63
2.6.1	Principle of Inertia	63
2.6.2	The Covariance Principle	64
2.7	Relativity and the Predictions of a Theory	66

3	Newtonian Physics	67
3.1	Introduction	67
3.2	Newtonian Kinematics	68
3.2.1	Mass Point	68
3.2.2	Space	69
3.2.3	Time	71
3.3	Newtonian Inertial Observers	74
3.3.1	Determination of Newtonian Inertial Observers	75
3.3.2	Measurement of the Position Vector	77
3.4	Galileo Principle of Relativity	78
3.5	Galileo Transformations for Space and Time – Newtonian Physical Quantities	79
3.5.1	Galileo Covariant Principle: Part I	79
3.5.2	Galileo Principle of Communication	80
3.6	Newtonian Physical Quantities. The Covariance Principle	81
3.6.1	Galileo Covariance Principle: Part II	81
3.7	Newtonian Composition Law of Vectors	82
3.8	Newtonian Dynamics	83
3.8.1	Law of Conservation of Linear Momentum	84
4	The Foundation of Special Relativity	87
4.1	Introduction	87
4.2	Light and the Galileo Principle of Relativity	88
4.2.1	The Existence of Non-Newtonian Physical Quantities..	88
4.2.2	The Limit of Special Relativity to Newtonian Physics..	89
4.3	The Physical Role of the Speed of Light	92
4.4	The Physical Definition of Spacetime	93
4.4.1	The Events	94
4.4.2	The Geometry of Spacetime	94
4.5	Structures in Minkowski Space	96
4.5.1	The Light Cone	96
4.5.2	World Lines	97
4.5.3	Curves in Minkowski Space	98
4.5.4	Geometric Definition of Relativistic Inertial Observers (RIO)	99
4.5.5	Proper Time	99
4.5.6	The Proper Frame of a RIO	100
4.5.7	Proper or Rest Space	101
4.6	Spacetime Description of Motion	102
4.6.1	The Physical Definition of a RIO	103
4.6.2	Relativistic Measurement of the Position Vector	104
4.6.3	The Physical Definition of an LRIO	105
4.7	The Einstein Principle of Relativity	105
4.7.1	The Equation of Lorentz Isometry	106

4.8	The Lorentz Covariance Principle	108
4.8.1	Rules for Constructing Lorentz Tensors	109
4.8.2	Potential Relativistic Physical Quantities	110
4.9	Universal Speeds and the Lorentz Transformation	110
5	The Physics of the Position Four-Vector	117
5.1	Introduction	117
5.2	The Concepts of Space and Time in Special Relativity	117
5.3	Measurement of Spatial and Temporal Distance in Special Relativity	118
5.4	Relativistic Definition of Spatial and Temporal Distances	120
5.5	Timelike Position Four-Vector – Measurement of Temporal Distance	121
5.6	Spacelike Position Four-Vector – Measurement of Spatial Distance	126
5.7	The General Case	129
5.8	The Reality of Length Contraction and Time Dilation	130
5.9	The Rigid Rod	132
5.10	Optical Images in Special Relativity	134
5.11	How to Solve Problems Involving Spatial and Temporal Distance	141
5.11.1	A Brief Summary of the Lorentz Transformation	141
5.11.2	Parallel and Normal Decomposition of Lorentz Transformation	142
5.11.3	Methodologies of Solving Problems Involving Boosts	143
5.11.4	The Algebraic Method	146
5.11.5	The Geometric Method	150
6	Relativistic Kinematics	155
6.1	Introduction	155
6.2	Relativistic Mass Point	155
6.3	Relativistic Composition of Three-Vectors	159
6.4	Relative Four-Vectors	166
6.5	The three-Velocity Space	174
6.6	Thomas Precession	177
7	Four-Acceleration	185
7.1	Introduction	185
7.2	The Four-Acceleration	186
7.3	Calculating Accelerated Motions	193
7.4	Hyperbolic Motion of a Relativistic Mass Particle	197
7.4.1	Geometric Representation of Hyperbolic Motion	200
7.5	Synchronization	204
7.5.1	Einstein Synchronization	204
7.6	Rigid Motion of Many Relativistic Mass Points	205

7.7	Rigid Motion and Hyperbolic Motion	206
7.7.1	The Synchronization of LRIO	208
7.7.2	Synchronization of Chronometry	209
7.7.3	The Kinematics in the LCF Σ	211
7.7.4	The Case of the Gravitational Field	214
7.8	General One-Dimensional Rigid Motion	216
7.8.1	The Case of Hyperbolic Motion	217
7.9	Rotational Rigid Motion	219
7.9.1	The Transitive Property of the Rigid Rotational Motion	222
7.10	The Rotating Disk	224
7.10.1	The Kinematics of Relativistic Observers	224
7.10.2	Chronometry and the Spatial Line Element	225
7.10.3	The Rotating Disk	228
7.10.4	Definition of the Rotating Disk for a RIO	229
7.10.5	The Locally Relativistic Inertial Observer (LRIO)	230
7.10.6	The Accelerated Observer	235
7.11	The Generalization of Lorentz Transformation and the Accelerated Observers	239
7.11.1	The Generalized Lorentz Transformation	240
7.11.2	The Special Case $u_0(l', x') = u_1(l', x') = u(x')$	242
7.11.3	Equation of Motion in a Gravitational Field	247
7.12	The Limits of Special Relativity	248
7.12.1	Experiment 1: The Gravitational Redshift	249
7.12.2	Experiment 2: The Gravitational Time Dilation	251
7.12.3	Experiment 3: The Curvature of Spacetime	252
8	Paradoxes	253
8.1	Introduction	253
8.2	Various Paradoxes	254
9	Mass – Four-Momentum	265
9.1	Introduction	265
9.2	The (Relativistic) Mass	266
9.3	The Four-Momentum of a ReMaP	267
9.4	The Four-Momentum of Photons (Luxons)	275
9.5	The Four-Momentum of Particles	278
9.6	The System of Natural Units	278
10	Relativistic Reactions	283
10.1	Introduction	283
10.2	Representation of Particle Reactions	284
10.3	Relativistic Reactions	285
10.3.1	The Sum of Particle Four-Vectors	286
10.3.2	The Relativistic Triangle Inequality	288

10.4	Working with Four-Momenta	289
10.5	Special Coordinate Frames in the Study of Relativistic Collisions	291
10.6	The Generic Reaction $A + B \rightarrow C$	292
10.6.1	The Physics of the Generic Reaction	293
10.6.2	Threshold of a Reaction	297
10.7	Transformation of Angles	304
10.7.1	Radiative Transitions	308
10.7.2	Reactions With Two-Photon Final State	312
10.7.3	Elastic Collisions – Scattering	317
11	Four-Force	325
11.1	Introduction	325
11.2	The Four-Force	325
11.3	Inertial Four-Force and Four-Potential	340
11.3.1	The Vector Four-Potential	342
11.4	The Lagrangian Formalism for Inertial Four-Forces	343
11.5	Motion in a Central Potential	350
11.6	Motion of a Rocket	355
11.7	The Frenet–Serret Frame in Minkowski Space	363
11.7.1	The Physical Basis	368
11.7.2	The Generic Inertial Four-Force	372
12	Irreducible Decompositions	377
12.1	Decompositions	377
12.1.1	Writing a Tensor of Valence (0,2) as a Matrix	378
12.2	The Irreducible Decomposition wrt a Non-null Vector	379
12.2.1	Decomposition in a Euclidean Space E^n	379
12.2.2	1 + 3 Decomposition in Minkowski Space	383
12.3	1+1+2 Decomposition wrt a Pair of Timelike Vectors	389
13	The Electromagnetic Field	395
13.1	Introduction	395
13.2	Maxwell Equations in Newtonian Physics	396
13.3	The Electromagnetic Potential	399
13.4	The Equation of Continuity	405
13.5	The Electromagnetic Four-Potential	412
13.6	The Electromagnetic Field Tensor F_{ij}	415
13.6.1	The Transformation of the Fields	415
13.6.2	Maxwell Equations in Terms of F_{ij}	417
13.6.3	The Invariants of the Electromagnetic Field	418
13.7	The Physical Significance of the Electromagnetic Invariants	421
13.7.1	The Case $Y = 0$	422
13.7.2	The Case $Y \neq 0$	423

13.8	Motion of a Charge in an Electromagnetic Field – The Lorentz Force	426
13.9	Motion of a Charge in a Homogeneous Electromagnetic Field ...	429
13.9.1	The Case of a Homogeneous Electric Field	430
13.9.2	The Case of a Homogeneous Magnetic Field	434
13.9.3	The Case of Two Homogeneous Fields of Equal Strength and Perpendicular Directions	436
13.9.4	The Case of Homogeneous and Parallel Fields $E \parallel B$..	438
13.10	The Relativistic Electric and Magnetic Fields	440
13.10.1	The Levi-Civita Tensor Density	440
13.10.2	The Case of Vacuum	442
13.10.3	The Electromagnetic Theory for a General Medium ...	445
13.10.4	The Electric and Magnetic Moments	448
13.10.5	Maxwell Equations for a General Medium	448
13.10.6	The 1 + 3 Decomposition of Maxwell Equations.....	449
13.11	The Four-Current of Conductivity and Ohm's Law	454
13.11.1	The Continuity Equation $J^a_{;a} = 0$ for an Isotropic Material.....	458
13.12	The Electromagnetic Field in a Homogeneous and Isotropic Medium.....	459
13.13	Electric Conductivity and the Propagation Equation for E^a	463
13.14	The Generalized Ohm's Law	465
13.15	The Energy Momentum Tensor of the Electromagnetic Field	467
13.16	The Electromagnetic Field of a Moving Charge	475
13.16.1	The Invariants	477
13.16.2	The Fields E^i, B^i	478
13.16.3	The Liénard–Wiechert Potentials and the Fields E, B ..	478
13.17	Special Relativity and Practical Applications.....	489
13.18	The Systems of Units SI and Gauss in Electromagnetism	492
14	Relativistic Angular Momentum	495
14.1	Introduction	495
14.2	Mathematical Preliminaries	495
14.2.1	1 + 3 Decomposition of a Bivector X_{ab}	495
14.3	The Derivative of X_{ab} Along the Vector p^a	498
14.4	The Angular Momentum in Special Relativity.....	500
14.4.1	The Angular Momentum in Newtonian Theory	500
14.4.2	The Angular Momentum of a Particle in Special Relativity	502
14.5	The Intrinsic Angular Momentum – The Spin Vector	506
14.5.1	The Magnetic Dipole	506
14.5.2	The Relativistic Spin	510
14.5.3	Motion of a Particle with Spin in a Homogeneous Electromagnetic Field.....	515
14.5.4	Transformation of Motion in Σ	517

15 The Covariant Lorentz Transformation 521

15.1 Introduction 521

15.2 The Covariant Lorentz Transformation 523

15.2.1 Definition of the Lorentz Transformation 523

15.2.2 Computation of the Covariant Lorentz Transformation . 524

15.2.3 The Action of the Covariant Lorentz Transformation
on the Coordinates 529

15.2.4 The Invariant Length of a Four-Vector..... 534

15.3 The Four Types of the Lorentz Transformation Viewed
as Spacetime Reflections 534

15.4 Relativistic Composition Rule of Four-Vectors 537

15.4.1 Computation of the Composite Four-Vector 540

15.4.2 The Relativistic Composition Rule for Three-Velocities 542

15.4.3 Riemannian Geometry and Special Relativity 544

15.4.4 The Relativistic Rule for the Composition
of Three-Accelerations 548

15.5 The Composition of Lorentz Transformations 550

16 Geometric Description of Relativistic Interactions 555

16.1 Collisions and Geometry 555

16.2 Geometric Description of Collisions in Newtonian Physics 556

16.3 Geometric Description of Relativistic Reactions 558

16.4 The General Geometric Results 559

16.4.1 The 1 + 3 Decomposition of a Particle Four-Vector
wrt a Timelike Four-Vector 561

16.5 The System of Two to One Particle Four-Vectors 563

16.5.1 The Triangle Function of a System of Two Particle
Four-Vectors 565

16.5.2 Extreme Values of the Four-Vectors $(A \pm B)^2$ 567

16.5.3 The System $A^a, B^a, (A + B)^a$ of Particle
Four-Vectors in CS 568

16.5.4 The System $A^a, B^a, (A + B)^a$ in the Lab 570

16.6 The Relativistic System $A^a + B^a \rightarrow C^a + D^a$ 574

16.6.1 The Reaction $B \rightarrow C + D$ 587

Bibliography..... 589
