

Contents

1	Gravitation and Newton's Laws	1
1.1	From Pythagoras to the Middle Ages	2
1.2	Copernicus, Kepler, and Galileo	6
1.3	Newton and Modern Science	13
1.4	Newton's Laws	15
1.4.1	Newton's First Law	15
1.4.2	Newton's Second Law	15
1.4.3	Planetary Motion in Newton's Theory	24
1.4.4	Newton's Third Law	26
1.5	Conservation Laws	27
1.5.1	Conservation of Linear Momentum	28
1.5.2	Conservation of Angular Momentum	29
1.5.3	Conservation of Energy	31
1.6	Degrees of Freedom	35
1.7	Inertial and Non-inertial Systems	36
1.8	The Principle of Least Action	40
1.9	Hamilton Equations	43
	Literature	45
2	Entropy, Statistical Physics, and Information	47
2.1	Thermodynamic Approach	48
2.1.1	First Law of Thermodynamics	49
2.1.2	Second Law of Thermodynamics	49
2.1.3	Third Law of Thermodynamics	51
2.1.4	Thermodynamic Potentials	51
2.2	Statistical Approach	52
2.3	Entropy and Statistical Physics	58
2.4	Temperature and Chemical Potential	60
2.5	Statistical Mechanics	60
2.5.1	Canonical Ensemble	62
2.5.2	Maxwell Distribution	68
2.5.3	Grand Canonical Ensemble	70
2.6	Entropy and Information	70

2.7	Maxwell's Demon and Perpetuum Mobile	72
	Literature	78
3	Electromagnetism and Maxwell's Equations	81
3.1	Coulomb's Law	84
3.2	Electrostatic and Gravitational Fields	86
3.3	Conductors, Semiconductors, and Insulators	87
3.4	Magnetic Fields	88
3.5	Magnetic Flux	89
3.6	Maxwell's Equations.....	91
3.6.1	Gauss's Law for Electric Fields	91
3.6.2	Gauss's Law for Magnetism	92
3.6.3	Faraday's Law	94
3.6.4	Ampère–Maxwell Law	95
3.7	Lorentz Force	96
3.8	Fields in a Medium	99
3.9	Magnetic Properties.....	102
3.9.1	Diamagnetism	103
3.9.2	Paramagnetism	103
3.9.3	Ferromagnetism	103
3.9.4	Ferrimagnetism, Antiferromagnetism, and Magnetic Frustration	105
3.9.5	Spin Ices and Monopoles	106
3.10	Phase Transitions	106
3.11	Spontaneous Symmetry Breaking.....	107
3.12	Superconductivity	109
3.13	Meissner Effect: Type I and II Superconductors	110
	Literature	111
4	Electromagnetic Waves	113
4.1	Waves in a Medium and in <i>Æther</i>	114
4.2	Electromagnetic Waves and Maxwell's Equations	115
4.2.1	Wave Propagation	117
4.2.2	Coherence	118
4.3	Generation of Electromagnetic Waves	119
4.3.1	Retarded potentials	119
4.3.2	Mechanisms generating electromagnetic waves	120
4.4	Wave Properties	121
4.4.1	Interference	121
4.4.2	Diffraction	124
4.4.3	Polarization	128
4.4.4	Spectral Composition	130
4.5	Fourier Series and Integrals	133
4.6	Reflection and Refraction.....	135
4.7	Dispersion of Light	137

4.8	Black Body Radiation	138
	Literature	141
5	Special Theory of Relativity	143
5.1	Postulates of Special Relativity	143
5.2	Lorentz Transformations	147
5.3	Light Cone and Causality	150
5.4	Contraction of Lengths	152
5.5	Time Dilation: Proper Time	153
5.6	Addition of Velocities	156
5.7	Relativistic Four-Vectors	156
5.8	Electrodynamics in Relativistically Covariant Formalism	158
5.9	Energy and Momentum	161
5.10	Photons	162
5.11	Neutrinos	163
5.12	Tachyons and Superluminal Signals	164
	Literature	166
6	Atoms and Quantum Theory	167
6.1	Motion of a Particle	167
6.2	Evolution of the Concept of Atom	170
6.3	Rutherford's Experiment	170
6.4	Bohr's Atom	171
6.5	Schrödinger's Equation	174
6.6	Wave Function	177
6.7	Operators and States in Quantum Mechanics	184
6.8	Quantum Harmonic Oscillator	188
6.8.1	Schrödinger's Equation for the Harmonic Oscillator	189
6.8.2	Ladder Operators	191
6.9	Emission and Absorption of Radiation	193
6.10	Stimulated Emission and Lasers	194
6.11	Tunnel Effect	194
6.12	Indistinguishability and Pauli's Principle	195
6.13	Exchange Interaction	197
6.14	Exchange Energy and Ferromagnetism	198
6.15	Distribution of Electrons in the Atom	199
6.16	Quantum Measurement	200
6.16.1	U and R Evolution Procedures	201
6.16.2	On Theory and Observable Quantities	202
6.17	Paradoxes in Quantum Mechanics	203
6.17.1	De Broglie's Paradox	203
6.17.2	Schrödinger's Cat Paradox	204
6.17.3	Toward the EPR Paradox	205
6.17.4	A Hidden Variable Model and Bell's Theorem	207

6.17.5	Bell Inequality and Conventional Quantum Mechanics	208
6.17.6	EPR Paradox: Quantum Mechanics vs. Special Relativity	210
6.18	Quantum Computation and Teleportation	211
	Literature	212
7	Quantum Electrodynamics	213
7.1	Dirac Equation	213
7.1.1	The Spin of the Electron	213
7.1.2	Hydrogen Atom in Dirac's Theory	219
7.1.3	Hole Theory and Positrons	220
7.2	Intermezzo: Natural Units and the Metric Used in Particle Physics	222
7.3	Quantized Fields and Particles	223
7.4	Quantum Electrodynamics (QED)	227
7.4.1	Unitarity in Quantum Electrodynamics	228
7.4.2	Feynman Diagrams	231
7.4.3	Virtual Particles	232
7.4.4	Compton Scattering	232
7.4.5	Electron Self-energy and Vacuum Polarization	236
7.4.6	Renormalization and Running Coupling Constant	239
7.5	Quantum Vacuum and Casimir Effect	241
7.6	Principle of Gauge Invariance	242
7.7	<i>CPT</i> Symmetry	246
7.8	Grassmann Variables	247
	Literature	249
8	Fermi–Dirac and Bose–Einstein Statistics	251
8.1	Fermi–Dirac Statistics	251
8.2	Fermi–Dirac and Bose–Einstein Distributions	253
8.3	The Ideal Electron Gas	255
8.4	Heat Capacity of Metals	257
8.5	Metals, Semiconductors, and Insulators	259
8.6	Electrons and Holes	261
8.7	Applications of the Fermi–Dirac Statistics	261
8.7.1	Quantum Hall Effect	261
8.7.2	Graphene	268
8.8	Bose–Einstein Statistics	270
8.9	Einstein–Debye Theory of Heat Capacity	271
8.10	Bose–Einstein Condensation	273
8.11	Quantum Coherence	277
	Literature	278

9	Four Fundamental Forces	279
9.1	Gravity and Electromagnetism	279
9.2	Strong Interactions	280
9.3	Weak Interactions	283
9.4	Parity Non-Conservation in Beta Decay	283
9.5	Violation of CP and T Invariance	285
9.6	Some Significant Numbers	288
9.7	Death of Stars	289
9.8	Neutron Stars and Pulsars	291
	Literature	293
10	General Relativity and Cosmology	295
10.1	Principle of Equivalence and General Relativity	296
10.2	Gravitational Field and Geometry	298
10.3	Affine Connection and Metric Tensor	303
10.4	Gravitational Field Equations	305
10.5	Cosmology	307
10.6	Gravitational Radius and Collapse	310
	10.6.1 Wormholes	314
	10.6.2 Dark Matter, Dark Energy, and Accelerated Expansion	315
10.7	Gravitation and Quantum Effects	317
10.8	Cosmic Numbers	317
	Literature	318
11	Unification of the Forces of Nature	319
11.1	Theory of Weak Interactions	319
11.2	Yang–Mills Fields	323
11.3	Nambu–Goldstone Theorem	325
11.4	Brout–Englert–Higgs Mechanism	327
11.5	Glashow–Salam–Weinberg Model	328
11.6	Electroweak Phase Transition	333
11.7	Hadrons and Quarks	334
11.8	Neutrino Oscillations and Masses	340
11.9	Quantum Chromodynamics	341
11.10	Grand Unification	345
11.11	Inflation	346
11.12	Supersymmetry and Superstrings	348
	Literature	351
12	Physics and Life	353
12.1	Order and Life	353
12.2	Life and Fundamental Interactions	357
12.3	Homochirality: Biological Symmetry Breaking	357
12.4	Neutrinos and Beta Decay	359
12.5	Anthropic Principle	361

12.6 Search for Extraterrestrial Life	362
Literature	363
Author Index	365
Subject Index	369
