Part I The Nuclear World, the Chemical World, and Radiation

1 The Nuclear World	3
1.1 Atoms	3
1.2 Nucleosynthesis	4
1.3 Nuclear Binding Energy	6
1.4 Nuclear Reactions	7
1.5 Note	8
1.5.1 Quantity = Number of Particles and Mass of Nucleon Particles	8
1.5.2 The Unit of Energy, Its Relationship to Mass, Temperature, and Frequency of the Photon Equivalent	9
1.5.3 Some Physical Constants	10
1.5.4 Scales of Number	10
1.5.5 Periodic Table: Periodic Chart	10
References	12
2 Nuclear Power and Radiation	13
2.1 Nuclear Fission Reaction	13
2.2 Nuclear Chain Reaction and Nuclear Power	14
2.3 Atomic Bombs and Nuclear Reactors	15
2.4 Radioactive Isotopes and Their Decay	16
References	20
3 The Chemical World	21
3.1 The Basics	21
3.2 Nonliving Chemical World	23
3.3 Living Chemical World	24
References	25

Part II The Military Uses of Nuclear Power: Hiroshima

4	Developing Atomic Bombs: The Manhattan Project	29
4.1	Birth of the Atomic Bomb	29
4.2	Why Did the United States Drop Atomic Bombs on Japan?	30
4.3	Nuclear Arms Race	31
	References	33
5	Devastation Caused by the Atomic Bombs: Hiroshima and Nagasaki	35
	References	37
6	Other Nuclear Weapons	39

Part III The “Peaceful” Uses of Nuclear Power: Fukushima

7	The Development of Nuclear Power Reactors and the Nuclear Industry	43
7.1	General Development	43
7.2	Nuclear Power Industry in Japan	45
7.3	General Problems	47
	Reference	48
8	Major Incidences of the Failure of Nuclear Facilities	49
8.1	Radiation Dispersal Under Normal Conditions	49
8.2	A Brief History of Major Incidents of Radiation Release	51
8.3	The Accident at Three Mile Island Nuclear Power Plant	52
8.4	The Accident at Chernobyl Nuclear Power Plant	53
8.5	The Accident at Fukushima Dai-ichi Nuclear Power Plant	56
8.5.1	The Causes and Processes of the Accident	56
8.5.2	The Distribution of Radioactive Material Released	60
	References	67

Part IV The Interactions of Radiation with the Chemical/Biological World: The Biohazards of Radiation

9	Interactions of Radiation with the Chemical World	71
9.1	Energy Changes in the Chemical World	71
9.2	Interaction of High-Energy Radiation with Chemicals	73
9.2.1	Photons (X-rays and γ -rays)	73
9.2.2	Beta (β)-Particles (Electrons) and β^+ -Particles (Positrons)	75
9.2.3	Alpha (α)-Particles	75
9.2.4	Neutrons	76
9.2.5	Radiation on Nonliving Chemicals	76
	Reference	78

10	Chemicals and Their Behaviors in Biological Systems	79
10.1	A Survey	79
10.2	Potassium and Cesium	80
10.3	Calcium and Strontium	84
10.4	Other Elements	85
	References	86
11	The Effects of Radiation on Biological Systems	87
11.1	Expression of Dose Due to Exposure: Sievert	87
11.1.1	Radioactivity and Exposure Dose Expression Currently in Use	87
11.1.2	Ambiguity in Exposure Dose Expression: Sv (Gy)	88
11.1.3	Exposure Effects, an Alternative Expression	89
11.2	External and Internal Exposure	90
11.3	Radioactive Material, Natural and Artificial, and Background Exposure	92
11.3.1	Radiation Sources	92
11.3.2	Background Radiation	93
11.3.3	Artificial Sources of Radiation: Medical Uses	95
11.3.4	Atomic Bombs	96
11.3.5	Radiation Escaped from Nuclear Power Reactors	97
11.4	Acute Radiation Effects	97
11.4.1	General Trends	97
11.4.2	Atomic Bomb Victims	100
11.4.3	Other Incidents	101
11.4.4	Acute Internal Exposure Effects: Atomic Bombs	102
11.5	Low-Dose Internal Exposure Effects	102
11.5.1	How and in What Form the Radiation Particles Were Spread from the Explosion of an Atomic Bomb?	103
11.5.2	Release and Spread of Radioactive Material from a Nuclear Power Plant Due to an Accident	104
11.5.3	How Radioactive Material (Gas or Small Particles) May Enter the Human Body and How They Behave?	105
11.5.4	Basic Mechanisms of Internal Exposure Effects	106
11.5.5	Stochastic Nature of Low-Dose Radiation Effects	109
11.5.6	Issue of LNT and Acute Versus Protracted Exposure	110
	References	111
12	Control of Cell Processes and Defenses Against Radiation	113
12.1	Mechanisms to Defend Against Damaging Effects or to Repair Lesions on Non-DNA Molecules	113
12.1.1	Effects of Nonradioactive Entities	113
12.1.2	Remedies for Radiation Effects	115

12.2	Control of Cellular Processes	118
12.2.1	Organism/Organs/Tissues/Cells	118
12.2.2	Cell Cycle	119
12.3	Damage to DNA and Controlling Systems	121
12.3.1	Damage/Modifications Caused by Nonradioactive Chemicals	122
12.3.2	Lesions on DNA Caused by Radiation	124
12.3.3	Cell Cycle Control upon DNA Damage	126
12.3.4	Repair of Damaged DNA	128
12.4	Cancer-Causing Processes	131
12.4.1	Processes Leading to Cancerous States	131
12.4.2	Specific Effects by Radiation?	134
12.5	Are Defense Mechanisms Sufficient?	136
12.6	Transgenerational Transmission of Radiation Effects?	138
	References	139

Part V Health Effects of Radiation Revealed So Far

13	Data on Hiroshima and Nagasaki	143
13.1	Acute External Exposure Effects	143
13.2	Hiroshima/Nagasaki: Long-Term Effects	146
13.2.1	Slow-Manifesting Cancers: General Trend	146
13.2.2	Radiation-Related Leukemia	147
13.2.3	LSS-14 Report	147
13.2.4	Problems with the Analysis of LSS Reports	150
13.3	Effects of Fallouts on Other Parts of Japan	151
	References	152
14	Data on Chernobyl	155
14.1	Discrepancy Between the Authorities' Reports and the Reality	155
14.2	Liquidators	156
14.3	Cs-137 Internal Effects on Noncancerous Diseases	157
14.3.1	The Overall Distribution	157
14.3.2	Internal Exposure	159
14.4	Cancers	163
14.4.1	Thyroid Cancer	163
14.4.2	Other Cancers	164
14.5	Other Effects	165
14.5.1	Infant Mortality	165
14.5.2	Teratogenic Effects (Malformations) and Others	166
14.5.3	Effects on the Brain: Psychological and Mental Problems	167
14.6	Transgenerational Effects	168
14.7	Effects on Plants and Animals	168
14.7.1	Plants	168
14.7.2	Animals and Microorganisms	169
	References	171

15 Data on Fukushima 173
15.1 Infant Mortality 173
15.2 Heart Failure and Other Diseases 173
15.3 Thyroid Gland Abnormalities and Cancers 176
15.4 Other Indications 177
15.5 Current Situations 178
References 178

**16 A-Bomb Tests; Three Mile Island and Other Incidents;
NPPs Under Normal Operation; Depleted Uranium Bombs 179**
16.1 Effects of A-Bomb/H-Bomb Tests 179
16.2 Three Mile Island Incident 181
16.3 Effects from NPPs and Other Nuclear Facilities Under “Normal”
Operational Conditions 183
16.3.1 In Europe 183
16.3.2 In the United States 184
16.4 DU (Depleted Uranium) Munitions 186
16.4.1 What Are DU Munitions and Where Have They Been
Used? 186
16.4.2 Gulf War Syndrome Among Veterans 188
16.4.3 DU Effects in Yugoslavia (Bosnia, Herzegovina,
Serbia) 189
16.4.4 Iraq/Fallujah/Basra 189
16.5 An Overall Trend in Cancer Rates 191
References 194

17 (High-Energy) Radiation Is Incompatible with Life 197
17.1 Incompatibility of Radiation with Life 197
17.2 Radiation in the Evolution of Life 200
17.3 Difficulties in Combating Radiation Effects in Real Life 201
References 203

**Part VI The Science of Biohazards of Radiation Has Been
Influenced by Non-scientific Interests**

18 Falsification and Suppression of the Truth 207
18.1 Development of the Idea of “Radiation Biology” 207
18.2 Manhattan Project up to Hiroshima/Nagasaki and Subsequent
Developments 208
18.3 Atomic Bomb Tests 210
18.4 Three Mile Island Incident 211
18.5 Chernobyl Incident 212
18.6 Fukushima Incident 213
References 215

19 The Crisis of Human Civilization and Life-Supporting Planet Earth	217
19.1 Nuclear Industry Lobby and Their Tactics	217
19.2 Other Signs of Radiation Effects?	218
19.3 Beyond Radiation Issues	220
References	222
Postscript	223
