

Contents

Part I Discrete and Graph-Theoretic Models for Data Analysis

Perspectives in Computational Genome Analysis	3
Giuditta Franco	
The Sequence Reconstruction Problem	23
Angela Angeleska, Sabrina Kleessen, and Zoran Nikoloski	
Extracting Coevolving Characters from a Tree of Species	45
Alessandra Carbone	
When and How the Perfect Phylogeny Model Explains Evolution	67
Paola Bonizzoni, Anna Paola Carrieri, Gianluca Della Vedova, Riccardo Dondi, and Teresa M. Przytycka	
An Invitation to the Study of Brain Networks, with Some Statistical Analysis of Thresholding Techniques	85
Mark Daley	
Simplicial Models and Topological Inference in Biological Systems	109
Vidit Nanda and Radmila Sazdanović	

Part II Molecular Arrangements and Structures

Combinatorial Insights into RNA Secondary Structure	145
Christine Heitsch and Svetlana Poznanović	
Redundant and Critical Noncovalent Interactions in Protein Rigid Cluster Analysis	167
Naomi Fox and Ileana Streinu	
Modeling Autonomous Supramolecular Assembly	197
Meera Sitharam	

The Role of Symmetry in Conformational Changes of Viral Capsids: A Mathematical Approach	217
Paolo Cermelli, Giuliana Indelicato, and Reidun Twarock	
Minimal Tile and Bond-Edge Types for Self-Assembling DNA Graphs	241
Joanna Ellis-Monaghan, Greta Pangborn, Laura Beaudin, David Miller, Nick Bruno, and Akie Hashimoto	
 Part III Gene Rearrangements	
Programmed Genome Processing in Ciliates	273
Aaron David Goldman, Elizabeth M. Stein, John R. Bracht, and Laura F. Landweber	
The Algebra of Gene Assembly in Ciliates	289
Robert Brijder and Hendrik Jan Hooeboom	
Invariants of Graphs Modeling Nucleotide Rearrangements	309
Egor Dolzhenko and Karin Valencia	
 Part IV Topological Models and Spatial DNA Embeddings	
Introduction to DNA Topology	327
Isabel K. Darcy, Stephen D. Levene, and Robert G. Scharein	
Reactions Mediated by Topoisomerases and Other Enzymes: Modelling Localised DNA Transformations	347
Dorothy Buck	
Site-Specific Recombination on Unknot and Unlink Substrates Producing Two-Bridge Links.....	363
Kenneth L. Baker	
Site-Specific Recombination Modeled as a Band Surgery: Applications to Xer Recombination	387
Kai Ishihara, Koya Shimokawa, and Mariel Vazquez	
 Part V Dynamics and Kinetics of Molecular Interactions	
Understanding DNA Looping Through Cre-Recombination Kinetics	405
Massa J. Shoura and Stephen D. Levene	
The QSSA in Chemical Kinetics: As Taught and as Practiced	419
Casian Pantea, Ankur Gupta, James B. Rawlings, and Gheorghe Craciun	
Algebraic Models and Their Use in Systems Biology	443
Reinhard Laubenbacher, Franziska Hinkelmann, David Murrugarra, and Alan Veliz-Cuba	

Deconstructing Complex Nonlinear Models in System Design Space..... 475
Michael A. Savageau and Jason G. Lomnitz

**IBCell Morphocharts: A Computational Model for Linking Cell
Molecular Activity with Emerging Tissue Morphology 507**
Katarzyna A. Rejniak
