Preface *XI*

Introduction *1*

1	Diffraction Phenomena in Optics	5
2	Wave Propagation in Periodic Media	11
3	Dynamical Diffraction of Particles and Fields: General Considerations	21
3.1	The Two-Beam Approximation	23
3.2	Diffraction Profile: The Laue Scattering Geometry	33
3.3	Diffraction Profile: The Bragg Scattering Geometry	38
4	Dynamical X-Ray Diffraction: The Ewald–Laue Approach	45
4.1	Dynamical X-Ray Diffraction: Two-Beam Approximation	49
4.1.1	The Role of X-Ray Polarization	50
4.1.2	The Two-Branch Isoenergetic Dispersion Surface for X-Rays	52
4.1.3	Isoenergetic Dispersion Surface for Asymmetric Reflection	56
5	Dynamical Diffraction: The Darwin Approach	61
5.1	Scattering by a Single Electron	61
5.2	Atomic Scattering Factor	64
5.3	Structure Factor	66
5.4	Scattering Amplitude from an Individual Atomic Plane	68
5.5	Diffraction Intensity in the Bragg Scattering Geometry	71
6	Dynamical Diffraction in Nonhomogeneous Media: The Takagi–Taupin Approach	77
6.1	Takagi Equations	77
6.2	Taupin Equation	84
6.2.1	Taupin Equation: The Symmetric Laue Case	84

6.2.2	Taupin Equation: The Symmetric Bragg Case	86
6.2.3	Solution of the Taupin Equation for Multilayered Structures	88
7	X-Ray Absorption	91
8	Dynamical Diffraction in Single-Scattering Approximation: Simulation of High-Resolution X-Ray Diffraction in Heterostructures and Multilayers	97
8.1	Direct Wave Summation Method	103
9	Reciprocal Space Mapping and Strain Measurements in Heterostructures	121
10	X-Ray Diffraction in Kinematic Approximation	131
10.1	X-Ray Polarization Factor	133
10.2	Debye–Waller Factor	135
11	X-Ray Diffraction from Polycrystalline Materials	139
11.1	Ideal Mosaic Crystal	139
11.2	Powder Diffraction	141
12	Applications to Materials Science: Structure Analysis	145
13	Applications to Materials Science: Phase Analysis	155
13.1	Internal Standard Method	158
13.2	Rietveld Refinement	159
14	Applications to Materials Science: Preferred Orientation (Texture) Analysis	161
14.1	The March–Dollase Approach	165
15	Applications to Materials Science: Line Broadening Analysis	171
15.1	Line Broadening due to Finite Crystallite Size	174
15.1.1	The Scherrer Equation	175
15.1.2	Line Broadening in the Laue Scattering Geometry	178
15.2	Line Broadening due to Microstrain Fluctuations	180
15.3	Williamson–Hall Method	181
15.4	The Convolution Approach	183
15.5	Instrumental Broadening	184
15.6	Relation between Grain Size-Induced and Microstrain-Induced Broadenings of X-Ray Diffraction Profiles	186
16	Applications to Materials Science: Residual Strain/Stress Measurements	189
16.1	Strain Measurements in Single-Crystalline Systems	189
16.2	Residual Stress Measurements in Polycrystalline Materials	190

17	Impact of Lattice Defects on X-Ray Diffraction	193
18	X-Ray Diffraction Measurements in Polycrystals with High Spatial Resolution	203
18.1	The Theory of Energy-Variable Diffraction (EVD)	206
18.1.1	Homogeneous Materials	210
18.1.2	Inhomogeneous Materials	212
19	Inelastic Scattering	217
19.1	Inelastic Neutron Scattering	218
19.2	Inelastic X-Ray Scattering	221
20	Interaction of X-Rays with Acoustic Waves	225
20.1	Thermal Diffuse Scattering	228
20.2	Coherent Scattering by Externally Excited Phonons	230
21	Time-Resolved X-Ray Diffraction	237
22	X-Ray Sources	241
22.1	Synchrotron Radiation	250
23	X-Ray Focusing Optics	257
23.1	X-Ray Focusing: Geometrical Optics Approach	261
23.2	X-Ray Focusing: Diffraction Optics Approach	268
23.2.1	Bragg–Fresnel Lenses and Fresnel Zone Plates	268
23.2.2	Using Asymmetric Reflections	272
24	X-Ray Diffractometers	275
24.1	High-Resolution Diffractometers	275
24.2	Powder Diffractometers	280
	References	285
	Index	291
