

Contents

1	Tunneling Ionization and Classical Trajectory Model	1
1.1	Tunneling Ionization Theory	1
1.1.1	Hydrogen Atoms in Static Electric Field: Parabolic Coordinate	1
1.1.2	Landau-Dykhne Adiabatic Approximation	5
1.1.3	Extended to Hydrogen-Like Atoms	9
1.2	Classical Trajectory Model	10
1.2.1	Classical Trajectory Monte Carlo (CTMC) Approach	10
1.2.2	Classical Trajectory Monte Carlo with Tunneling Allowance (CTMC+T) Approach	12
	References	13
2	Single Ionization in Strong Laser Fields	15
2.1	Semiclassical Model for Single Ionization	15
2.2	Plateau in Above-Threshold-Ionization (ATI) Spectrum and Irregular Photoelectron Angular Distribution (PAD)	17
2.3	Chaotic Behavior in Rescattering Process	20
2.4	Partial Atomic Stabilization in Strong-field Tunneling Ionization	22
2.5	Survival Window for Atomic Tunneling Ionization with Elliptically Polarized Laser Fields	24
2.6	Classical Trajectory Interference	26
	References	30
3	Double Ionization in Strong Laser Fields	33
3.1	Introduction: “Knee” Structure of Double Ionization Yields and Correlated Electron Momentum Distribution	33
3.2	Semiclassical Model for Nonsequential Double Ionization	35
3.3	Finger-Like Structure in the Correlated Electron Momentum Distribution	37
3.3.1	Finger-Like Structure	37
3.3.2	Trajectory Dynamics	39

3.4	Transition to Below the Recollision Threshold	41
3.4.1	Recollision Induced Excitation-Tunneling (RIET) Effect	41
3.4.2	Modified Recollision Threshold	43
3.5	Double Ionization Dynamics of Diatomic Molecules	45
3.5.1	Enhanced Double Ionization Rate	45
3.5.2	Typical Classical Trajectories	48
3.5.3	Effect of Molecular Alignment	51
3.6	Double Ionization in Circularly Polarized Laser Fields	52
3.6.1	Model Calculation	53
3.6.2	Correlated Dynamics	53
3.6.3	Phase Diagramm	55
	References	56
4	Partition of the Linear Photon Momentum in Atomic Tunneling Ionization	59
4.1	Brief Introduction	59
4.2	Semiclassical Model for Partition of Photon Momentum	60
4.3	Coulomb Attraction Effects	61
4.4	Classical Trajectory Analysis	63
	References	65
5	Acceleration of Neutral Atoms with Polarized Intense Laser Fields	67
5.1	Brief Introduction	67
5.2	Extended CTMC+T Model for Atomic Acceleration	68
5.3	Distribution of Neutral Atoms and Their Accelerations	70
5.3.1	Distribution of Neutral Atoms	70
5.3.2	Average Atomic Acceleration	72
5.4	Maximum Velocity	74
	References	74
6	Atomic Ionization in Relativistic Intense Laser Fields	77
6.1	CTMC-T Calculation on Relativistic High-Z Atom Ionization	77
6.1.1	CTMC-T Model	77
6.1.2	Laser Intensity Dependency of High-Z Atom Ionization	78
6.2	Relativistic Semiclassical Tunneling Model	80
	References	84
