Contents

1 Particle Drifts and the First Adiabatic Invariant 1
1.1 Introduction: Adiabatic Theory and the Guiding Center Approximation 1
1.2 Uniform Magnetic Field; Basic Definitions; Magnetic Moment 6
1.3 Zero-Order Drifts 12
1.4 Examples of "E Cross B" Drifts; Uniform Magnetic Field of Time-Dependent Intensity 15
1.5 First Order Drifts 22
1.6 Example: Drift of 90° Pitch-Angle Particles in the Magnetospheric Equator; Effects of an Electric Field 26
References 34

2 Higher Order Drifts and the Parallel Equation of Motion 35
2.1 General Expression of the Drift Velocity and Higher Order Drifts 35
2.2 Motion Along the Field Line and the Energy Equation 41
2.3 Particle Trapping and Parallel Electric Fields 46
Reference 55

3 Drift Shells and the Second and Third Adiabatic Invariants 57
3.1 Bounce-Average Drift Velocity and Drift Shells 57
3.2 The Second Adiabatic Invariant 62
3.3 Shell Splitting and Pseudo-trapping 65
3.4 Effects of Internal Field Multipoles on Inner Magnetosphere Particle Shells; McIlwain's L-Value 72
3.5 Time-Changing Fields and the Third Adiabatic Invariant 78
References 87

4 Particle Fluxes, Distribution Functions and Violation of Invariants ... 89
4.1 Particle Fluxes and Pitch Angle Distributions 89
4.2 Distribution Functions and Their Transformations 93
4.3 Macroscopic Variables and the Particle Pressure Tensor 96

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.4 Liouville's Theorem and Stationary Trapped Particle Ensembles ... 101
4.5 Particle Distributions and Mapping in Invariant Space ... 108
4.6 Basics of the Diffusion Process of Trapped Particles ... 111
4.7 Derivation of the Fokker-Planck Equation ... 116
References ... 122

5 Collisionless Plasmas ... 123
5.1 Introduction: From Individual Particles to Fluids ... 123
5.2 The Guiding Center Fluid Model ... 125
5.3 Currents and Stresses Arising from Interactions with the Magnetic Field ... 133
5.4 From the Guiding Center Fluid to a Quasi-neutral Center-of-Mass Fluid ... 140
5.5 Collisions and the Generalized Ohm Equation ... 147
5.6 Epilogue ... 156
References ... 158

Appendices ... 159
A.1 What You Should Know About $\boldsymbol{B}$ but Maybe Forgot ... 159
A.1.1 Magnetostatics in a Nutshell ... 159
A.1.2 "Natural" Coordinate Systems in a Magnetic Field ... 164
A.1.3 Electrodynamics in a Nutshell: Interpreting Maxwell's Equations ... 172
A.1.4 The Mess with Electromagnetic Units: Why? ... 177
A.2 Expression for the Bounce-Average Drift Velocity ... 179
A.3 Conservation of the Third Adiabatic Invariant ... 183
References ... 187
