|----------|-----------------------------------------------------------------------------------------------|----------|
| <b>1</b> | <b>Clinical Pathology</b>                                                                     | <b>1</b> |
|          | <i>Masoud Mireskandari and Iver Petersen</i>                                                  |          |
| 1.1      | Introduction                                                                                  | 1        |
| 1.2      | Pathology as a Medical and Research Discipline                                                | 1        |
| 1.3      | Historical Perspectives                                                                       | 2        |
| 1.4      | Specimens                                                                                     | 3        |
| 1.4.1    | Biopsies, Resections, and Cytology                                                            | 3        |
| 1.5      | Conventional Diagnostic Methods in Pathology                                                  | 4        |
| 1.5.1    | Cytology                                                                                      | 5        |
| 1.5.2    | Histology                                                                                     | 6        |
| 1.5.3    | Microscopy                                                                                    | 8        |
| 1.5.4    | Intraoperative Assessment (Frozen Section Examination)                                        | 9        |
| 1.5.5    | Why Pathologists Do Not Like Frozen Tissue Examination?                                       | 11       |
| 1.5.6    | Microdissection                                                                               | 12       |
| 1.6      | Nonconventional (Ancillary) Diagnostic Methods in Pathology (Molecular Assessment of Tissues) | 13       |
| 1.6.1    | <i>In Situ</i> Reactions                                                                      | 13       |
| 1.6.1.1  | Immunofluorescence (IF)                                                                       | 13       |
| 1.6.1.2  | Immunohistochemistry (IHC)                                                                    | 14       |
| 1.6.1.3  | Fluorescent <i>In Situ</i> Hybridization (FISH)                                               | 14       |
| 1.6.2    | Non- <i>In Situ</i> Methods                                                                   | 15       |
| 1.7      | Summary of Major Terms in Clinical Pathology                                                  | 17       |
| 1.7.1    | Injury and Adaptation                                                                         | 17       |
| 1.7.2    | Inflammation and Repair                                                                       | 18       |
| 1.7.3    | Neoplastic Diseases                                                                           | 20       |
| 1.8      | Limitations of Clinical and Diagnostic Pathology                                              | 23       |
| 1.8.1    | Prediction of Tumor Behavior                                                                  | 24       |
| 1.8.2    | Diagnosis of Tumor Origin in a Case with Metastatic Tumor Disease                             | 24       |

|          |                                                                                                                                                  |           |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 1.8.3    | Individualized Medicine and Targeted Therapy                                                                                                     | 25        |
|          | Further Readings                                                                                                                                 | 26        |
| <b>2</b> | <b>Clinical Endoscopy in Gastrointestinal Diseases</b>                                                                                           | <b>27</b> |
|          | <i>Martin Goetz, Joerg Felber, and Andreas Stallmach</i>                                                                                         |           |
| 2.1      | Introduction                                                                                                                                     | 27        |
| 2.2      | White-Light Endoscopy                                                                                                                            | 29        |
| 2.3      | Chromoendoscopy                                                                                                                                  | 30        |
| 2.4      | Virtual Chromoendoscopy                                                                                                                          | 32        |
| 2.5      | Endomicroscopy and Endocytoscopy                                                                                                                 | 33        |
| 2.6      | Endoscopic Spectroscopy                                                                                                                          | 34        |
| 2.6.1    | Autofluorescence Imaging                                                                                                                         | 36        |
| 2.6.2    | Raman Spectroscopy                                                                                                                               | 36        |
| 2.7      | Perspectives and Conclusions                                                                                                                     | 37        |
|          | References                                                                                                                                       | 38        |
| <b>3</b> | <b>Molecular Pathology via Infrared and Raman Spectral Imaging</b>                                                                               | <b>45</b> |
|          | <i>Max Diem, Antonella Mazur, Kathleen Lenau, Jen Schubert, Jennifer Fore, Benjamin Bird, Miloš Miljković, Christoph Krafft, and Jürgen Popp</i> |           |
| 3.1      | Introduction                                                                                                                                     | 45        |
| 3.2      | Background                                                                                                                                       | 47        |
| 3.3      | Methods                                                                                                                                          | 52        |
| 3.3.1    | Sample Preparation                                                                                                                               | 53        |
| 3.3.2    | Collection of Hyperspectral Data Cubes                                                                                                           | 54        |
| 3.3.3    | Data Preprocessing                                                                                                                               | 56        |
| 3.3.4    | Presorting (Cluster Analysis)                                                                                                                    | 57        |
| 3.3.5    | Visual Imaging                                                                                                                                   | 57        |
| 3.3.6    | Annotation                                                                                                                                       | 58        |
| 3.3.7    | Diagnostic Data Analysis                                                                                                                         | 59        |
| 3.3.8    | Visual Data Analysis: Factor Methods                                                                                                             | 61        |
| 3.4      | Results and Discussion                                                                                                                           | 62        |
| 3.4.1    | IR-SHP: Detection of Metastases and Micro-Metastases in Lymph Nodes                                                                              | 62        |
| 3.4.1.1  | IR-SHP of Micro-Metastases in Lymph Nodes                                                                                                        | 64        |
| 3.4.1.2  | IR-SHP of Lymphocyte Activation in Lymph Nodes                                                                                                   | 66        |
| 3.4.2    | SHP of Squamous Cell Carcinoma and Adenocarcinomas                                                                                               | 70        |
| 3.4.2.1  | Distinction of Different Cancer Types by IR-SHP                                                                                                  | 70        |
| 3.4.2.2  | Diagnosis of Lung SqCC and Lung ADC via IR-SHP                                                                                                   | 72        |
| 3.4.2.3  | Diagnosis of Cervical SqCC and Cervical ADC via SHP                                                                                              | 74        |
| 3.4.3    | Results from Infrared Spectral Cytopathology (SCP)                                                                                               | 76        |
| 3.4.3.1  | Background                                                                                                                                       | 76        |
| 3.4.3.2  | Design and Methods of the Preclinical Trial for Oral Screening                                                                                   | 77        |
