1	Landmarks for Neurogeometry	1
<i>Jean Petitot</i>		
1.1	Introduction	1
1.2	Perceptual Geometry Since the 1970s	3
1.2.1	Thom's Models	3
1.2.2	Some Autobiographic Remarks	5
1.2.3	Perceptual Geometry and Phenomenology	6
1.2.4	Caustics in Optics	7
1.2.5	Structuralism and Categorical Perception in Phonetics	9
1.2.6	Mental Dynamics	10
1.3	The Connections between Perceptual Geometry, Image Processing, and Computational Vision from the 80s	11
1.3.1	Koenderink, Hoffman and the “Singularities of the Visual Mapping”	11
1.3.2	Scale Space Analysis and Anisotropic Diffusion	12
1.3.3	Segmentation and Illusory Contours in David Mumford	14
1.3.4	Receptive Profiles and Wavelets	16
1.3.5	Neural Net Dynamics and Attractors	17
1.4	The Neurogeometrical Turn Since the 1990s	20
1.4.1	Neuromathematical Interdisciplinarity	20
1.4.2	Efficient Coding, Receptive Profiles and Natural Images	22
1.4.3	Orientation Hypercolumns, “Internal” Variables, and Fibre Bundles	25
1.4.4	Pinwheels and in Vivo Optical Imaging	26
1.4.5	The Pinwheels as Phase Singularities or Dislocations	27
1.4.6	The Fibre Bundle $\mathbb{V} = \mathbb{R}^2 \times \mathbb{P}^1$ as a Blowing Up Model for Pinwheels	37

1.4.7	Independent “Engrafted” Variables and the Transversality Principle	38
1.4.8	Horizontal Connections and Association Field	39
1.4.9	The Contact Structure	42
1.4.10	Illusory Contours as Sub-Riemannian Geodesics	48
1.4.11	From Maurer-Cartan to Bryant-Griffiths	49
1.5	Developments in Neurogeometry after 2000	52
1.5.1	Collaborations with Alessandro Sarti and Giovanna Citti	52
1.5.2	The Geodesics of the \mathbb{V}_J Model	61
1.5.3	New Collaborations with Neurosciences and Psychophysics	66
1.5.4	Neurogeometry and Control Theory (Agrachev’s Group)	70
1.5.5	Confluence between \mathbb{V}_J and \mathbb{V}_S Models	77
1.6	Conclusion	78
	References	79
2	Shape, Shading, Brain and Awareness	87
	<i>Jan Koenderink, Andrea van Doorn</i>	
2.1	Structure of the Scene in Front of an Observer: Radiometry	87
2.1.1	Shading Geometry	88
2.1.2	Outline of the Paper	89
2.2	Visual Front-End	89
2.2.1	Brain Activity due the Optical Structure	89
2.2.2	Representation of the Optical Structure	90
2.3	Local Shape	92
2.3.1	The Geometry of “Pictorial Space”	93
2.3.2	Differential Geometry of Pictorial Space	95
2.4	The “Shape From Shading” Problem	99
2.4.1	Naive Radiometry	100
2.4.2	The Shape Cue Inference	100
2.5	The Shading Cue and Visual Awareness: Phenomenology	102
2.6	Conclusion	104
	References	104
3	Why Shading Matters along Contours	107
	<i>Benjamin Kunsberg, Steven W. Zucker</i>	
3.1	Introduction	107
3.1.1	Motivation from Neurobiology	109
3.1.2	Overview	111
3.2	The Shading Flow	111
3.2.1	Psychophysical Evidence	113
3.2.2	Intensity Transformations	113
3.2.3	Surface Scaling	113
3.2.4	Critical Curves	116

3.3	Geometric Analysis of Shape Inference	116
3.3.1	Calculating the Brightness Gradient	118
3.3.2	Calculating the Covariant Derivative of Projected Light Source.....	119
3.3.3	Covariant Derivative of the Isophote Condition	120
3.4	The Second-Order Shading Equations	122
3.5	Simplifications of the Shading Equations.....	122
3.5.1	Ambiguity Reduction at Critical Points	123
3.5.2	Reconstruction from Critical Points	123
3.5.3	Highlights.....	124
3.5.4	Ridges	126
3.6	Conclusion	127
	References	128

4 From Functional Architectures to Percepts: A

	Neuromathematical Approach	131
	<i>Giovanna Citti, Alessandro Sarti</i>	
4.1	Introduction	131
4.2	Functional Architecture of Lateral Geniculate Nucleus	133
4.2.1	Receptive Fields and Profiles of Thalamic Cells	133
4.2.2	Cell Response and Lateral Connectivity of LGN	134
4.2.3	The Retinex Algorithm as a Model of LGN Action	134
4.3	The Neurogeometrical Structure of the Primary Visual Cortex	136
4.3.1	The Set of Simple Cells Receptive Profiles as a Lie Group	136
4.3.2	Simple Cells Response	137
4.3.3	Non Maximal Suppression	138
4.3.4	Association Fields and Integral Curves of the Structure	139
4.3.5	Length of Lifted Curves and Geodesics	141
4.4	The Cortical Implementation of the Neurogeometrical Structure	142
4.4.1	Response of Simple Cells and Bargmann Transform	142
4.4.2	The Activity Maps and the Pinwheel Structure	143
4.4.3	An Uncertainty Principle on the Functional Geometry	144
4.4.4	Irreducible Bargman Transform, the Activity Maps and Pinwheels	146
4.4.5	Propagation in the Pinwheel Structure	147
4.5	Propagation in the Family of Simple Cells	148
4.5.1	Propagation along the Association Fields	148
4.5.2	The Lifting Mechanism of the Whole Image: Regular Graphs in $R^2 \times S^1$	148
4.5.3	Completion Model and Minimal Surfaces in the Roto-translation Space	149
4.5.4	Minimal Surfaces as Minima of the Area Functional	151

4.6	A Field Lagrangian for Perceptual Completion	152
4.6.1	The Full Lagrangian	152
4.6.2	The Euler Lagrange Equations	153
4.6.3	Solution of Euler Lagrange Equations	155
4.7	Stochastic Neurogeometry	156
4.7.1	The Statistics of Edges in Natural Images	160
4.7.2	Comparison between the Statistics of Edges and the Stochastic Structure	160
4.8	A Harmonic Neurogeometrical Model	163
4.8.1	The Binding Problem and the Constitution of Perceptual Units	163
4.8.2	The Population Model	164
4.8.3	Solutions of the Activity Equation	164
4.8.4	The Discrete Case	165
4.8.5	Dimensionality Reduction	166
4.8.6	Constitution of Perceptual Units	166

5	Cuspless Sub-Riemannian Geodesics within the Euclidean Motion Group $SE(d)$	173
	<i>Remco Duits, Arpan Ghosh, Tom Dela Hailje, Yuri Sachkov</i>	
5.1	Introduction	173
5.1.1	Preliminaries and Notations	178
5.1.2	Lifting Problem $\mathbf{P}_{\text{curve}}$ to Problem \mathbf{P}_{mec} on $(SE(d), \Delta_d, G_\beta)$	180
5.1.3	Structure of the Article	183
5.2	Sub-Riemannian Geodesics in $(\mathbb{R}^d \rtimes S^{d-1}, \Delta_d, G_1)$	183
5.2.1	Summary: The Exponential Map of Control Problem $\mathbf{P}_{\text{curve}}$	189
5.3	The Case $d = 2$: Sub-Riemannian Geodesics in $(\mathbb{R}^2 \rtimes S^1, \Delta_2, G_1)$	190
5.3.1	Switching to the Case $\mathbf{a} = \mathbf{e}_x$ and Re-labeling of the Lie-Algebra	191
5.3.2	Explicit Parameterizations of the Cuspless Sub-Riemannian Geodesics and Their Properties	192
5.3.3	The Set \mathfrak{R} and Its Boundary $\partial\mathfrak{R}$	193
5.3.4	Solving the Boundary Value Problem	196
5.3.5	Modeling Association Fields with Solutions of $\mathbf{P}_{\text{curve}}$	198
5.4	The Case $d = 3$: Sub-Riemannian Geodesics in $(\mathbb{R}^3 \rtimes S^2, \Delta_3, G_1)$	201
5.4.1	Explicit Parameterizations of the Sub-Riemannian Geodesics	203
5.4.2	Explicit Definition of the Exponential Map of $\mathbf{P}_{\text{curve}}$	205
5.4.3	The Range of the $\widetilde{\text{Exp}}$ Map and Cones of Reachable Angles	207

5.5	The Case $d = 4$: Sub-Riemannian Geodesics in ($SE(4), \Delta_4, G_1$)	209
Appendix A	210
