

# Content

**Preface — V**

**Acronyms, abbreviations and symbols — XI**

## **1 Process Integration and Intensification: an introduction — 1**

- 1.1 Process Intensification — 1
- 1.2 Process Systems Engineering and Process Integration — 3
- 1.3 Contributions to PIs and PI to energy and water saving — 4
- 1.4 What is Process Integration? — 4
- 1.5 A brief history of the development of Process Integration — 5
- 1.6 The aim and scope of this textbook — 8
- References — 9

## **2 Setting energy targets and Heat Integration — 13**

- 2.1 Introduction — 13
  - 2.1.1 Initial development of Heat Integration — 14
  - 2.1.2 Pinch Technology and targeting Heat Recovery: the thermodynamic roots — 14
  - 2.1.3 Supertargeting: full-fledged HEN targeting — 15
  - 2.1.4 Modifying the Pinch Idea for HEN retrofit — 16
  - 2.1.5 Benefits of Process Integration — 16
- 2.2 Pinch Analysis for maximising energy efficiency — 17
  - 2.2.1 Introduction to Heat Exchange and Heat Recovery — 17
  - 2.2.2 Basic principles — 19
  - 2.2.3 Basic Pinch Technology — 28
- 2.3 Summary — 63
- References — 64

## **3 Synthesis of Heat Exchanger Networks — 67**

- 3.1 Introduction — 67
- 3.2 HEN synthesis — 67
  - 3.2.1 The Pinch Design Method — 68
  - 3.2.2 Methods using mathematical programming — 89
- 3.3 Grassroots and retrofits, impact of economic criteria — 93
  - 3.3.1 Network optimisation — 93
  - 3.3.2 The Network Pinch — 94
- 3.4 Summary — 96
- References — 96

<b>4</b>	<b>Total Site Integration — 99</b>
4.1	Introduction — 99
4.2	What is a Total Site and what are the benefits? — 100
4.2.1	Total Site definition — 101
4.2.2	Total Site Analysis interfaces — 102
4.3	HI extension for Total Sites: data extraction for Total Sites — 103
4.3.1	The algorithm — 103
4.3.2	Step-by-step guidance — 105
4.3.3	Working session — 109
4.4	Total Site Profiles and Total Site Composite Curves — 110
4.5	Site Utility Grand Composite Curve (SUGCC) — 118
4.6	Combined Heat and Power Generation (CHP, Cogeneration) targeting — 120
4.6.1	A simple cogeneration model — 121
4.6.2	Targeting CHP using the SUGCC — 122
4.6.3	Choice of optimal steam pressure levels — 124
4.7	Advanced Total Site developments — 126
4.7.1	Introduction of process-specific minimum allowed temperature differences — 126
4.7.2	Numerical tools for Total Site Heat Integration — 127
4.7.3	Power Integration — 128
4.8	Summary — 133
	References — 134
<b>5</b>	<b>Introduction to Water Pinch Analysis — 137</b>
5.1	Water management and minimisation — 137
5.2	History and definition of Water Pinch Analysis — 138
5.3	Applications of Water Pinch Analysis — 139
5.4	Water Pinch Analysis steps — 140
5.5	Analysis of water networks and data extraction — 141
5.5.1	Analysis of water networks — 141
5.5.2	Data extraction — 143
5.5.3	Example — 144
	References — 148

<b>6</b>	<b>Setting the maximum water recovery targets — 151</b>
6.1	Introduction — 151
6.2	Maximum water recovery target for single pure freshwater — 155
6.2.1	Water Cascade Analysis technique — 155
6.2.2	Source/Sink Composite Curves (SSCC) — 158
6.2.3	Significance of the Pinch region — 159
6.3	Maximum water recovery target for a single impure freshwater source — 160
6.3.1	Pinched problems — 160
6.3.2	Threshold problems — 166
6.4	Maximum water recovery targets for multiple freshwater sources — 168
6.5	Working session — 170
6.6	Solution — 170
	References — 174
<b>7</b>	<b>Water network design/retrofit — 177</b>
7.1	Introduction — 177
7.2	Source/Sink Mapping Diagram (SSMD) — 177
7.3	Source and Sink Allocation Curves (SSAC) — 179
7.3.1	Example of network design using SSCC for utility purity superior to all other streams — 183
7.3.2	Freshwater purity not superior to all other streams — 186
7.3.3	Simplification of a water network or constructing other network possibilities — 189
7.4	Working session — 192
7.5	Solution — 193
7.6	Water MATRIX software — 195
	References — 196
<b>8</b>	<b>Design of Cost-Effective Minimum Water Network (CEMWN) — 197</b>
8.1	Introduction — 197
8.2	Water Management Hierarchy — 197
8.3	Cost-Effective Minimum Water Network (CEMWN) — 199
8.4	Industrial case study – a semiconductor plant — 209
8.4.1	Using CEMWN targets as reference benchmarks — 227
	References — 227

<b>9</b>	<b>Conclusions and sources of further information — 229</b>
9.1	HEN targeting and synthesis — 229
9.2	Total Site Integration — 229
9.3	Total Site methodology addressing variable energy supply and demand — 231
9.4	Utility system optimisation accounting for cogeneration — 231
9.5	Maximum water recovery targeting and design — 232
9.5.1	Recommended books for further reading — 233
9.5.2	State of-the-art review — 234
9.6	Analysing the designs of isolated energy systems — 235
9.7	PI contribution to supply chain development — 236
9.8	Hydrogen networks design and management — 236
9.9	Oxygen Pinch Analysis — 237
9.10	Pressure drop considerations and heat transfer enhancement in Process Integration — 238
9.11	Computational and modelling tools suitable for applying PI — 240
9.11.1	Heat and power PI applications — 241
9.11.2	Water Pinch software — 242
9.12	Challenges and recent developments in Pinch-based PI — 243
	References — 244
	<b>Index — 249</b>
