<b>Seismic Imaging, Fault Damage and Heal: An Overview —</b>	<b>1</b>
References —	10

## **1 Applications of Full-Wave Seismic Data**

### **Assimilation (FWSDA) — 15**

1.1	Numerical Solutions of Seismic Wave Equations —	16
1.1.1	Stable Finite-Difference Solutions on Non-Uniform, Discontinuous Meshes —	18
1.1.2	Accelerating Finite-Difference Methods Using GPUs —	22
1.1.3	The ADER-DG Method —	26
1.1.4	Accelerating the ADER-DG Method Using GPUs —	29
1.2	Automating the Waveform Selection Process for FWSDA —	41
1.2.1	Seismogram Segmentation —	42
1.2.2	Waveform Selection —	49
1.2.3	Misfit Measurement Selection —	50
1.2.4	Fréchet Kernels for Waveforms Selected in the Wavelet Domain —	51
1.3	Application of FWSDA in Southern California —	55
1.3.1	Waveform Selection on Ambient-Noise Green's Functions —	57
1.3.2	Waveform Selection on Earthquake Recordings —	59
1.3.3	Inversion Results after 18 times Adjoint Iteration —	60
1.4	Summary and Discussion —	63
	References —	65

## **2 Wavefield Representation, Propagation and Imaging Using Localized Waves: Beamlet, Curvelet and Dreamlet — 73**

2.1	Introduction —	74
2.2	Phase-Space Localization and Wavelet Transform —	77
2.2.1	Time-Frequency Localization —	78
2.2.2	Time-Scale Localization —	81
2.2.3	Extension and Generalization of Time-Frequency, Time-Scale Localizations —	82
2.3	Localized Wave Propagators: From Beam to Beamlet —	85
2.3.1	Frame Beamlets and Orthonormal Beamlets —	87
2.3.2	Beamlet Spreading, Scattering and Wave Propagation in the Beamlet Domain —	90

2.3.3	Beam Propagation in Smooth Media with High-Frequency Asymptotic Solutions —	96
2.3.4	Beamlet Propagation in Heterogeneous Media by the Local Perturbation Approach —	101
2.4	Curvelet and Wave Propagation —	106
2.4.1	Curvelet and Its Generalization —	106
2.4.2	Fast Digital Transforms for Curvelets and Wave Atoms —	110
2.4.3	Wave Propagation in Curvelet Domain and the Application to Seismic Imaging —	110
2.5	Wave Packet: Dreamlets and Gaussian Packets —	112
2.5.1	Physical Wavelet and Wave-Packets —	112
2.5.2	Dreamlet as a Type of Physical Wavelet —	116
2.5.3	Seismic Data Decomposition and Imaging/Migration Using Dreamlets —	119
2.5.4	Gaussian Packet Migration and Paraxial Approximation of Dreamlet —	123
2.6	Conclusions —	130
	Acknowledgement —	131
	References —	132

### **3 Two-way Coupling of Solid-fluid with Discrete Element Model and Lattice Boltzmann Model — 143**

3.1	Introduction —	143
3.2	Discrete Element Method and the ESyS-Particle Code —	146
3.2.1	A Brief Introduction to the Open Source DEM Code: The ESyS-Particle —	147
3.2.2	The Basic Equations —	147
3.2.3	Contact Laws and Particle Interaction —	148
3.2.4	Fracture Criterion —	150
3.3	Lattice Boltzmann Method —	151
3.3.1	The Basic Principle of LBM —	151
3.3.2	Boundary Conditions of LBM —	152
3.3.3	A Brief Introduction to the Open Source LBM Code: OpenLB —	156
3.4	Two-way Coupling of DEM and LBM —	156
3.4.1	Moving Boundary Conditions —	157
3.4.2	Curved Boundary Conditions —	157
3.4.3	Implementation of Darcy Flow in LBM —	160
3.5	Preliminary Results —	161
3.5.1	Bonded Particles Flow in Fluid —	161
3.5.2	Fluid Flow in the Fractures —	162
3.5.3	Hydraulic Fracture Simulation —	164
3.6	Discussion and Conclusions —	166
	Acknowledgement —	167
	References —	167

<b>4</b>	<b>Co-seismic Damage and Post-Mainshock Healing of Fault Rocks at Landers, Hector Mine and Parkfield, California Viewed by Fault-Zone Trapped Waves — 173</b>
4.1	Introduction — 173
4.2	Rock Damage and Healing on the Rupture Zone of the 1992 <i>M</i> 7.4 Landers Earthquake — 176
4.2.1	Landers Rupture Zone Viewed with Fault-Zone Trapped Waves — 176
4.2.2	Fault Healing at Landers Rupture Zone — 183
4.2.3	Additional Damage on the Landers Rupture Zone by the Nearby Hector Mine Earthquake — 192
4.3	Rock Damage and Healing on the Rupture Zone of the 1999 <i>M</i> 7.1 Hector Mine Earthquake — 194
4.3.1	Hector Mine Rupture Zone Viewed with FZTWs — 194
4.3.2	Fault Healing at Hector Mine Rupture Zone — 204
4.4	Rock Damage and Healing on the San Andreas Fault Associated with the 2004 <i>M</i> 6 Parkfield Earthquake — 208
4.4.1	Low-Velocity Damaged Structure of the San Andreas Fault at Parkfield from Fault Zone Trapped Waves — 209
4.4.2	Seismic Velocity Variations on the San Andreas Fault Caused by the 2004 <i>M</i> 6 Parkfield Earthquake — 218
4.4.3	Discussion — 237
4.5	Conclusion — 239
	Acknowledgment — 242
	References — 242
<b>5</b>	<b>Subsurface Rupture Structure of the <i>M</i>7.1 Darfield and <i>M</i>6.3 Christchurch Earthquake Sequence Viewed with Fault-Zone Trapped Waves — 249</b>
5.1	Introduction — 250
5.2	The Data and Waveform Analyses — 256
5.2.1	The FZTWs Recorded for Aftershocks along Darfield/Greendale Rupture Zone — 264
5.2.2	The FZTWs Recorded for Aftershocks along Christchurch/Port Hills Rupture Zone — 277
5.3	Subsurface Damage Structure Viewed with FZTWs — 288
5.4	3-D Finite-Difference Simulations of Observed FZTWs — 294
5.5	Conclusion and Discussion — 306
	Acknowledgment — 314
	References — 314
<b>6</b>	<b>Characterizing Pre-shock (Accelerating) Moment Release: A Few Notes on the Analysis of Seismicity — 323</b>
6.1	Introduction — 323
6.2	The ‘Interfering Events’ and the ‘Eclipse Method’ — 325
6.3	Comparing with Linear Increase: The BIC Criterion — 327

6.4	The Time-Space- $M_C$ Mapping of the Scaling Coefficient, $m(T, R, M_C)$ — 328
6.5	Removal of Aftershocks and the ‘De-clustered Benioff Strain’ — 331
6.6	‘Crack-like’ Spatial Window for Great Earthquakes: The 2008 Wenchuan Earthquake — 335
6.7	Looking into a Finite Earthquake Rupture: The 2004 Sumatra-Andaman Earthquake — 338
6.8	Using Seismic Moment Tensors to Investigate the Moment Release: $AM_{ij}R$ before the 2011 Tohoku Earthquake? — 340
6.9	Concluding Remarks and Discussion — 344
6.10	Appendix: The Magnitude Conversion Problem, and the Completeness of an Earthquake Catalogue — 345
6.10.1	Magnitudes — 345
6.10.2	Conversion of Magnitudes — 346
6.10.3	Completeness of an Earthquake Catalogue — 347
	References — 347
<b>7</b>	<b>Statistical Modeling of Earthquake Occurrences Based on External Geophysical Observations: With an Illustrative Application to the Ultra-low Frequency Ground Electric Signals Observed in the Beijing Region — 351</b>
7.1	Introduction — 352
7.2	The Data — 354
7.3	Model Description — 357
7.4	Results for Circles around the Individual Stations — 359
7.5	Results for the 300 km Circle around Beijing — 364
7.6	Results from the Tangshan Region — 369
7.7	Probability Gains from Forecasts Based on Electrical Signals — 371
7.8	Effect of Changes in the Background Seismicity — 373
7.9	Conclusions — 374
	References — 375
