

Contents

1 Introduction	1
1.1 About the contents of this book	3
1.2 Historical remarks	10
1.3 References	16
2 Methods in Trauma Biomechanics	17
2.1 Statistics, field studies, databases	17
2.2 Basic concepts of biomechanics	21
2.3 Injury criteria, injury scales and injury risk	26
2.4 Accident reconstruction	30
2.5 Experimental models	34
2.6 Standardised test procedures	39
2.6.1 Anthropomorphic test devices	47
2.7 Numerical methods	54
2.8 Summary	58
2.9 Exercises.....	59
2.10 References	60
3 Head Injuries	63
3.1 Anatomy of the head	63
3.2 Injuries and injury mechanisms	65
3.3 Mechanical response of the head	70
3.4 Injury criteria for head injuries	75
3.4.1 Head Injury Criterion (HIC)	75
3.4.2 Head Protection Criterion (HPC)	77
3.4.3 3 ms criterion (a_{3ms})	77
3.4.4 Generalized Acceleration Model for Brain Injury Threshold ...	77
3.5 Head injuries in sports.....	79
3.6 Head injury prevention.....	84
3.6.1 Head injury prevention in pedestrians.....	85
3.7 Summary	88

X Contents

3.8 Exercises.....	88
3.9 References	89
4 Spinal Injuries	95
4.1 Anatomy of the spine	96
4.2 Injury mechanisms	99
4.3 Biomechanical response and tolerances	107
4.4 Injury criteria	112
4.4.1 Neck injury criterion NIC	113
4.4.2 N_{ij} neck injury criterion	114
4.4.3 Neck protection criterion N_{km}	115
4.4.4 Lower Neck Load Index (LNL)	118
4.4.5 Neck injury criteria in ECE and FMVSS	119
4.4.6 Further neck injury criteria.....	121
4.4.7 Correlating neck injury criteria to the injury risk	122
4.5 Spinal injuries in sports.....	124
4.6 Prevention of soft tissue neck injury.....	126
4.6.1 Head restraint geometry and padding material.....	127
4.6.2 Controlling head restraint position	129
4.6.3 Controlling seat back motion	131
4.7 Summary	133
4.8 Exercises.....	133
4.9 References	134
5 Thoracic Injuries	143
5.1 Anatomy of the thorax	143
5.2 Injury mechanisms	145
5.2.1 Rib fractures	147
5.2.2 Lung injuries	148
5.2.3 Injuries to other thoracic organs	149
5.3 Biomechanical response	153
5.3.1 Frontal loading	153
5.3.2 Lateral loading	157
5.4 Injury tolerances and criteria	159
5.4.1 Acceleration and force	159
5.4.2 Thoracic Trauma Index (TTI)	160
5.4.3 Compression Criterion (C)	161
5.4.4 Viscous Criterion (VC)	161
5.4.5 Combined Thoracic Index (CTI)	162
5.4.6 Other criteria	162
5.5 Thoracic injuries in sports.....	163

5.6 Summary	163
5.7 Exercises.....	163
5.8 References	165
6 Abdominal Injuries	169
6.1 Anatomy of the abdomen	169
6.2 Injury mechanisms	170
6.3 Testing the biomechanical response	173
6.4 Injury tolerance	175
6.4.1 Injury criteria	176
6.5 Influence of seat belt use	177
6.6 Abdominal injuries in sports	178
6.7 Summary	178
6.8 Exercises.....	178
6.9 References	179
7 Injuries of the Pelvis and the Lower Extremities	183
7.1 Anatomy of the lower limbs	183
7.2 Injury mechanisms	185
7.2.1 Injuries of the pelvis and the proximal femur	190
7.2.2 Leg, knee and foot injury	192
7.3 Impact tolerance of the pelvis and the lower extremities	194
7.4 Injury criteria	198
7.4.1 Compression force	199
7.4.2 Femur Force Criterion (FFC)	199
7.4.3 Tibia Index (TI)	199
7.4.4 Other criteria	200
7.5 Pelvic and lower extremity injuries in sports.....	200
7.6 Prevention of lower extremity injuries	204
7.6.1 Pedestrian injury countermeasures.....	205
7.7 Summary	206
7.8 Exercises.....	206
7.9 References	208
8 Injuries of the Upper Extremities	213
8.1 Anatomy of the upper limbs	213
8.2 Injury incidences and mechanisms	215
8.3 Impact tolerance	217
8.4 Injury criteria and evaluation of injury risk from airbags	219
8.5 Upper extremity injuries in sports	221
8.6 Summary	226

XII Contents

8.7 Exercises.....	226
8.8 References	227
9 Impairment and injuries resulting from chronic mechanical exposure...	231
9.1 Occupational health	235
9.2 Sports	237
9.2.1 Non contact sports	237
9.2.2 Contact sports	239
9.3 Household work	239
9.4 Summary	239
9.5 References	240
10 Solutions to exercises	243
11 Subject index	247
