Chapter 0	Introduction	1
	References	3
Chapter 1	Basics of the Finite Difference	
	Approximations	5
1.1	Finite difference approximations	5
1.2	The initial value problem for ODEs	11
1.3	Some basic numerical methods	16
1.4	Some basic PDEs	26
1.5	Numerical solution to partial differential equations	32
	References	38
Chapter 2	Principles of the Implicit Keller-box Method	41
2.1	Principles of implicit finite difference methods	41
2.2	Finite difference methods	53
2.3	Boundary value problems in ordinary differential equations	71
	References	87
Chapter 3	Stability and Convergence of the Implicit	
	Keller-box Method	89
3.1	Convergence of implicit difference methods for parabolic functional differential equations	90
3.1.1	Introduction	90
3.1.2	Discretization of mixed problems	91
3.1.3	Solvability of implicit difference functional problems	94
3.1.4	Approximate solutions of difference functional problems	96
3.1.5	Convergence of implicit difference methods	99
3.1.6	Numerical examples	103

3.2	Rate of convergence of finite difference scheme on uniform/non-uniform grids	105
3.2.1	Introduction	105
3.2.2	Analytical results	106
3.2.3	Numerical results	110
3.3	Stability and convergence of Crank-Nicholson method for fractional advection dispersion equation	112
3.3.1	Introduction	112
3.3.2	Problem formulation	113
3.3.3	Numerical formulation of the Crank-Nicholson method	114
3.3.4	Stability of the Crank-Nicholson method	115
3.3.5	Convergence	116
3.3.6	Radial flow problem	117
3.3.7	Conclusions	118
	References	118

Chapter 4 Application of the Keller-box Method to

	Boundary Layer Problems	121
4.1	Flow of a power-law fluid over a stretching sheet	121
4.1.1	Introduction	121
4.1.2	Formulation of the problem	122
4.1.3	Numerical solution method	124
4.1.4	Results and discussion	125
4.1.5	Concluding remarks	126
4.2	Hydromagnetic flow of a power-law fluid over a stretching sheet	126
4.2.1	Introduction	126
4.2.2	Flow analysis	128
4.2.3	Numerical solution method	130
4.2.4	Results and discussion	130
4.3	MHD Power-law fluid flow and heat transfer over a non-isothermal stretching sheet	135
4.3.1	Introduction	135
4.3.2	Governing equations and similarity analysis	137
4.3.3	Heat transfer	139
4.3.4	Numerical procedure	141
4.3.5	Results and discussion	149

4.4	MHD flow and heat transfer of a Maxwell fluid over a non-isothermal stretching sheet	151
4.4.1	Introduction	151
4.4.2	Mathematical formulation	153
4.4.3	Heat transfer analysis	155
4.4.4	Numerical procedure	158
4.4.5	Results and discussion	159
4.4.6	Conclusions	165
4.5	MHD boundary layer flow of a micropolar fluid past a wedge with constant wall heat flux	166
4.5.1	Introduction	166
4.5.2	Flow analysis	167
4.5.3	Flat plate problem	170
4.5.4	Results and discussion	171
4.5.5	Conclusions	176
	References	177

Chapter 5 Application of the Keller-box Method to

Fluid Flow and Heat Transfer Problems 183

5.1	Hydromagnetic flow and heat transfer adjacent to a stretching vertical sheet	183
5.1.1	Introduction	183
5.1.2	Mathematical formulation	184
5.1.3	Solution of the problem	187
5.1.4	Results and discussion	188
5.1.5	Conclusions	194
5.2	Convection flow and heat transfer of a Maxwell fluid over a non-isothermal surface	194
5.2.1	Introduction	194
5.2.2	Mathematical formulation	196
5.2.3	Skin friction	199
5.2.4	Nusselt number	200
5.2.5	Results and discussion	200
5.2.6	Conclusion	206
5.3	The effects of variable fluid properties on the hydromagnetic flow and heat transfer over a nonlinearly stretching sheet	207
5.3.1	Introduction	207
5.3.2	Mathematical formulation	208
5.3.3	Numerical procedure	212

5.3.4	Results and discussion	213
5.3.5	Conclusions	223
5.4	Hydromagnetic flow and heat transfer of a non-Newtonian power law fluid over a vertical stretching sheet	223
5.4.1	Introduction	223
5.4.2	Mathematical formulation	225
5.4.3	Numerical procedure	229
5.4.4	Results and discussion	229
5.5	The effects of linear/nonlinear convection on the non-Darcian flow and heat transfer along a permeable vertical surface	238
5.5.1	Introduction	238
5.5.2	Mathematical formulation	240
5.5.3	Numerical procedure	243
5.5.4	Results and discussion	253
5.6	Unsteady flow and heat transfer in a thin film of Ostwald-de Waele liquid over a stretching surface	255
5.6.1	Introduction	255
5.6.2	Mathematical formulation	257
5.6.3	Numerical procedure	261
5.6.4	Results and discussion	262
5.6.5	Conclusions	272
	References	272

Chapter 6 Application of the Keller-box Method to

More Advanced Problems

6.1	Heat transfer phenomena in a moving nanofluid over a horizontal surface	279
6.1.1	Introduction	279
6.1.2	Mathematical formulation	281
6.1.3	Similarity equations	283
6.1.4	Numerical procedure	285
6.1.5	Results and discussion	286
6.1.6	Conclusion	297
6.2	Hydromagnetic fluid flow and heat transfer at a stretching sheet with fluid-particle suspension and variable fluid properties	298
6.2.1	Introduction	298
6.2.2	Mathematical formulation	300
6.2.3	Solution for special cases	303

6.2.4 Analytical solution by perturbation 303

6.2.5 Numerical procedure 305

6.2.6 Results and discussion 306

6.2.7 Conclusions 317

6.3 Radiation effects on mixed convection over a wedge
embedded in a porous medium filled with a nanofluid 318

6.3.1 Introduction 318

6.3.2 Problem formulation 319

6.3.3 Numerical method and validation 322

6.3.4 Results and discussion 323

6.3.5 Conclusion 337

6.4 MHD mixed convection flow over a permeable
non-isothermal wedge 337

6.4.1 Introduction 337

6.4.2 Mathematical formulation 339

6.4.3 Numerical procedure 342

6.4.4 Results and discussion 344

6.4.5 Concluding remarks 354

6.5 Mixed convection boundary layer flow about a solid
sphere with Newtonian heating 355

6.5.1 Introduction 355

6.5.2 Mathematical formulation 357

6.5.3 Solution procedure 360

6.5.4 Results and discussion 360

6.5.5 Conclusions 366

6.6 Flow and heat transfer of a viscoelastic fluid over a flat
plate with a magnetic field and a pressure gradient 371

6.6.1 Introduction 371

6.6.2 Governing equations 372

6.6.3 Results and discussion 375

6.6.4 Conclusions 382
