<b>Foreword .....</b>	<b>V</b>
<b>Preface .....</b>	<b>VII</b>
<b>Part I: Mass Conservation.....</b>	<b>1</b>
<b>1 The Principle .....</b>	<b>3</b>
1.1 Conservation of Mass.....	3
1.1.1 A Convenient Form of the Equation of Mass Conservation .....	4
1.2 Application of Mass Conservation to a Biological Cell: Metabolic Flux Analysis.....	6
1.3 Application of Mass Conservation to Macroscopic Systems .....	8
1.3.1 Challenges in Oxygen Supply to Bioreactors.....	11
1.4 Useful Forms of Mass Conservation in Fluid Systems .....	11
1.4.1 What is a Fluid? .....	11
1.4.2 Useful Derivatives .....	12
1.4.3 Equation of Continuity for a Single Component System.....	13
1.4.4 Equation of Continuity in Different Coordinate Systems .....	16
Exercises.....	17
Fully Open-ended Exercise .....	20
References .....	20
<b>2 Mass Flux.....</b>	<b>21</b>
2.1 Primary Driving Force for Mass Flux.....	21
2.1.1 Basis for Expressing Mass Flux.....	22
2.1.2 Mass and Molar Fluxes .....	25
2.2 A Constitutive Equation .....	27
2.2.1 Fick's First Law.....	27
2.2.1.1 In Concentrated Solutions .....	29

2.3	Solution Approaches .....	29
2.3.1	Shell Balance Approach.....	30
2.3.2	Continuity (Conservation) Equation Approach .....	31
2.4	Steady State Diffusion.....	37
2.4.1	Steady State Diffusion Across Membranes.....	37
2.4.2	Steady State Radial Diffusion Across Tubular Walls.....	42
2.4.3	Steady State Radial Diffusion Across Spherical Pellets .....	44
2.4.3.1	Enzyme Immobilised on a Porous Spherical Matter.....	46
2.5	Unsteady State Diffusion.....	49
2.6	Pseudo Steady State Approximation (PSSA) for Unsteady State Diffusion .....	56
	Exercises.....	60
	Fully Open-ended Exercise.....	67
	References .....	67
<b>Part II: Momentum Conservation.....</b>		<b>69</b>
<b>3</b>	<b>Momentum Flux.....</b>	<b>71</b>
3.1	Rheology .....	72
3.2	Types of Flows .....	75
3.3	Shell Momentum Balances .....	76
3.4	Equation of Motion .....	80
3.4.1	Applications of the Equations of Motion: Steady State Falling Film.....	92
3.4.2	Flow in a Cylindrical Pipe .....	93
3.4.2.1	Capillary Flow .....	99
3.4.3	Tangential Annular Flow .....	101
3.4.4	Dimensionless Numbers and Non-dimensional Analysis.....	106
3.5	Unsteady State Flow.....	110
3.6	Pulsatile Flow .....	116
3.7	Solutions to Equations.....	118
3.7.1	Stream Function Approach .....	119
3.7.2	Boundary Layer Theory.....	119
3.8	Turbulent Flow.....	119
3.9	Macroscopic Aspects: The Engineering Bernoulli Equation .....	124
3.9.1	Friction Factor for Flow through a Straight Horizontal Pipe.....	126
3.9.2	Friction Factor for Solids Moving Relative to a Fluid .....	136

3.9.3 Friction Factor in Packed Beds .....	137
Exercises.....	142
Fully Open-ended Exercise .....	145
References .....	145
<b>Part III: Energy Conservation .....</b>	<b>147</b>
<b>4 Thermal Energy Flux.....</b>	<b>149</b>
4.1 Other Modes of Heat Flux .....	150
4.2 Equation of Energy .....	151
4.2.1 Temperature Profile in a Tissue .....	162
4.2.2 Unsteady State Heat Conduction.....	165
Exercises.....	167
Fully Open-ended Exercise.....	169
Reference.....	169
<b>Part IV: Charge Conservation .....</b>	<b>171</b>
<b>5 Charge Flux.....</b>	<b>173</b>
5.1 Lorentz Force Law .....	174
5.2 Charge Density and Flux.....	174
5.3 Maxwell's Relations .....	175
5.3.1 How is the Electric Field Related to its Source?.....	175
5.3.2 How is the Magnetic Field Intensity Related to its Source, the Charge Flux? .....	175
5.3.3 How are Electric Field and Magnetic Flux Related?.....	176
5.3.4 A Comment on the Net Magnetic Flux Out of Any Region .....	177
5.4 An Expression for Charge Conservation .....	177
5.5 Maxwell's Equations in Differential Form .....	178
5.5.1 Application of Maxwell's Equations to Get Useful Relationships .....	180
5.5.2 Electroencephalogram (EEG) .....	183
5.6 Constitutive Equation .....	183
5.7 Ions in Solutions.....	184
5.7.1 Electro Neutrality.....	184
5.7.2 Charge Relaxation Time .....	185
5.7.3 Debye Length.....	186
Exercises.....	187
References .....	187

**Part V: Multiple Conservations Simultaneously Applied..... 189**

**6 Fluxes Under Simultaneous, Multiple Driving Forces ..... 191**

6.1 Simultaneous Concentration Gradient and Electrical Potential

Gradient..... 192

6.1.1 Mobility of Ions in Solution ..... 192

6.1.2 Mobility of Ions Across a Membrane..... 195

6.1.3 Electrical Circuit Representation of a Membrane..... 198

6.1.4 Action Potential and Axial Current..... 201

6.1.5 Electrophoresis..... 203

6.2 Simultaneous Concentration Gradient and Velocity

Gradient: Blood Oxygenators..... 205

6.2.1 The Transfer Coefficient Approach: Inter-phase  
Oxygen Supply to Bioreactors ..... 208

6.2.2 The Transfer Coefficient Approach: Immobilised  
Enzyme Reaction Kinetics..... 213

6.3 Simultaneous Temperature Gradient and Velocity Gradient:

Heat Transfer to Fluid Flowing in a Long Circular Tube  
Under Laminar Flow Conditions ..... 215

6.3.1 Momentum Flux Induced by Thermal Force: Free  
Convection ..... 218

6.3.2 The Utility of Heat Transfer Coefficients: Design  
of Heat Exchangers..... 222

6.3.3 Some Other Useful Formulations..... 230

6.3.4 The Unsteady State Bioheat Transfer Equation..... 230

Exercises..... 231

References ..... 233

**Appendix ..... 235**

Appendix 1: Background on Vectors and Tensors ..... 235

Appendix 2: Derivation of Fick’s First Law ..... 255

Appendix 3: Diffusivity in Concentrated Solutions ..... 258

**Index ..... 261**
